■Remarks: JIS JIS B 2032 FS Fire Safe Approvals (API607 4th Edition) CE CE Marking NK Nippon Kaiji Kyokai (NK) LR Lloyd's Register of Shipping ABS American Bureau of Shipping

※Please contact us if needed any detailed information.

※1 -46°C service for Tritac is available with suitable material.

Please consult our sales for the service condition lower than -46°C.

※2 EPDM/NBR: If the fluid contains chlorine, the seat ring could be corroded early by combined factors such as concentration and temperature. For further information please contact our sales staff. In case of chlorine-containing fluid, 846T or 847T (containing fluorine resin) is recommended depending on combined factors such as concentration.

※3 In case of RPTFE, maximum operating temperature should not exceed 230°C.

※4 CE marking is not obtained depending on the material and nominal size. If CE marking is required, please consult sales staff. JIS B 2032 is a reference standard for the design and quality of wafer type rubber seat butterfly valves.

ISO 9001

Due to our highly-evaluated quality system throughout all processes across the entire company, from designing and development to order acceptance, procurement, manufacturing, inspection and shipment, registration of the ISO9001 international standard for quality management systems has been approved.

※The certification authority : Tomoe Valve Co., Ltd. (Japan)..... JIC
Shanghai Tomoe Valve Co., Ltd. (China) Lloyd's
Tomoe Valve Limited (UK) Lloyd's
PT. Tomoe Valve Batam (Indonesia)..... Lloyd's

Certifying authority	Certifying authority accredited by JICQA (JIC Quality Assurance Ltd.), and Japan Accreditation Board
Date of registration	September 11, 1995
Registration number	No.0091
Scope of registration	Designing, development and servicing of butterfly valves, actuators, and accessories

ISO9001 is a standard for a quality system for the entire company, whose scope ranges from quality policy of managers and clarification of responsibility to development, designing, order acceptance, procurement, manufacturing, inspection, shipment, servicing and even education and training. This standard requires systems that supply high-quality products trusted by users.

- Dry models other than 302Y cannot be used in places where products are exposed to flame or in environments where pipes are constantly filled with gas.

However, these models can be used if covered with fire-resistant material such as Rockwool[†], of thickness more than 50 mm, to avoid direct flame.

*1 For selection of Rockwool, please inquire with fire authorities in your district.

- In environments such as above, please use 302Y (dry model).
- Rubber seated valves whose certification numbers have no suffixed numbers after hyphens are certified as wet models.

Handling Precautions

Butterfly Valves (common to all models)

For improvement of the product, dimensions or material may be changed without notice.
Please contact us for up-to-date information

Storage Conditions

- To protect the seat rings, do not unpack valves until you are ready to install them. If a valve remains unpacked for a long period of time, dust or other particles may enter the valve and cause seat leakage.
- For temporary storage before installing or for long-term storage, keep valves in the vinyl bag in which they came and store them indoors in a cool, well-ventilated location (temperature of -10 to 60°C and humidity of 70% or less). Keep the valve away from dusty locations and take care in protecting the valve and actuator from bearing excessive weights.

Installing Valves

- Valves can be installed in any orientation, to allow for the easiest possible operation of the valve. However, be careful of the orientation of the stem when your pipe layout is one of those covered on next page.

Piping Instructions

- Verify the materials of the seat ring and disc of the valve before installation.
- When installing a butterfly valve directly to a check valve or pump, install an extension or spacer to prevent the disc of the butterfly valve from contacting the check valve or pump.
- Install the valve only after completing all welding operations around the valve to prevent damage caused by the solder and other welding materials.
- After welding is performed on a flange, wait until it has sufficiently cooled before installing the valve. Never perform welding on a flange with the valve installed.
- In the surrounding piping, make sure that no welding residue, pipe waste, scaling, or dust remain in the pipe. Clean the inside of the pipes if necessary prior to installation.
- Before blowing air to remove any foreign matter in the piping, install an extension tube with face-to-face dimensions equal to that of the valve in place of the valve. Do not blow air with the valve installed in the pipe, for this may damage the seat ring.
- Clean the mating surface of the flange with compressed air before installation. Remove rust or foreign particles with cleaning alcohol or a neutral detergent.
- With a zinc plated flange, attention must be paid to avoid flange leakage due to an uneven surface of the flange.
- Make sure that there is no warpage in the flange, misalignment, or damage to the mating surface of the flange.
- Be sure to properly align the valve and mounting flanges.
- Install the jack bolts taking care not to damage the seat ring of the valve and adjust the face-to-face dimensions. The face-to-face dimensions should be such that the piping is spread open 3 to 5mm to allow the valve to be inserted.
- If possible, avoid mounting the actuator with it facing downward. Especially for valve sizes of 350mm or larger, where the lower portion of the valve stem bears thrust loads, never install the actuator facing downward.
- After centering the pipes, insert bolts at the proper locations so that the bottom of the valve can rest upon them to prevent the valve from falling through.
- Before tightening the installation bolts, make sure that the disc of the valve does not contact any portion of the flange when it is fully opened.

- Tighten the installation bolts to a torque of no more than 60Nm (6kgfm).
- The installation bolts should be tightened evenly and in the proper sequence. Tighten one bolt a small amount, and then proceed to another bolt that is located on the other side. Proceed tightening each bolt a little at a time by crisscrossing across the flange to insure well-balanced tightening.
- Upon completion of installation, fully open and close the valve once again to make sure that the disc does not touch the piping or gasket.

Operational Instructions

- Prior to operation, clean the outside of the piping with compressed air, and the inside of the piping with running water.
- If the valve is to be used at an opening angle of 30° or under for flow constriction, consult us beforehand.

Also...

- After installation, open and close the valve once every two weeks if the valve is not used for a long period of time, and open and close the valve a few times before starting actual operation.
- For pressure tests of the piping (where pressures exceed the rated pressure), always keep the valve fully open. Never fully close the valve or use it as a blind flange.
- If the actuator is a manual gear, pneumatic cylinder, electric motor, diaphragm or other similar type, and the ambient temperature is extremely high, it may be necessary to change the O-rings and other rubber components using special materials, or change the motor or solenoids to those with higher insulation levels, so be sure to consult us beforehand.
- Always operate lock lever, worm gear, or center handle type actuators by hand. Never use an extension bar on the lever or a wheel key on the gear handle, for they might damage the handle or lever. Unlike gate valves or globe valves, tightening with a high torque is unnecessary.
- Do not loosen the installation bolts or other bolted components before relieving the system pressure.
- To avoid any damage, which may be caused by vibration of piping to a valve, provide a 3D to 5D straight distance from any nozzle orifice or control valve which may be installed at the upper stream of the piping line. (See correct example of a combination of control valve and stop valve on the right.)
- A valve 350mm or over may have a nut and bolt on the center of the bottom cover to support the weight of disc. Please do not touch it.
- Do not touch any open/close adjusting bolts and screws on any actuators (gear/pneumatic cylinder/electric motor) as these were pre-adjusted.

- We will indicate “ level ” of danger caused by neglecting these cautions as the following:

 CAUTION	This mark indicates “ possibility of serious injury to personnels or damage to components ”

- We will indicate following marks for your attention.

	This mark indicates that “ you must not ”

**CAUTION**

We will indicate “ level ” of danger caused by neglecting these cautions as the following:

**CAUTION**

this mark indicates “ possibility of serious injury to personnels or damage to components ”

We will indicate following marks for your attention.

this mark indicates that “ you must not ”

Forcing the valve between the pipe flanges may cause the seat ring to peel off and cause a leak.

Do not touch the stopper bolts of the gear box.

The closed position for the valve will change and result in leaking.

Do not throw or mishandle the valve. Do not stand on or put objects on the actuator.

Below are causes of damage to the valve seat or leakage from the flanges.

- **Excessive Weld**

The resulting oversized inner pipe diameter may cause a flange leak.

- **Sharp Edges**

May cause damage to the seat ring.

- **Rough Surface from Grinding**

May cause a flange leak.

Do not install a valve to a flange that has just been welded.

Wait until it has sufficiently cooled before installing the valve. Never perform welding on a flange with the valve installed.

**Installing a valve at a pump outlet**

- **Incorrect Installation**

- **Correct Installation**

**Installing at an elbow or a reducer**

- **Incorrect Installation**

- **Correct Installation**

**Combination of a control valve and stop valve**

- **Incorrect Installation**

All the valve stems have the same orientation.

- **Correct Installation**

The orientation of the valve stems is alternating.

Handling Precautions

High Performance Butterfly Valves

TT2

334A

Tom Disco 302A /304A

Tom Disco 302Y/304Y/304YA

304M(HLV)

Storage Conditions

- Since the PTFE used in the seat rings is easily damaged, do not remove the protective covers on both sides of the valves until you are ready to install the valve (dust or other foreign particles may enter the valve and cause leakage).

Precautions Regarding Piping

- If valve models 337Y/336Y are used in temperatures exceeding 300C, use the specified spiral-wound gaskets.
- The gaskets must be properly aligned with the pipe flanges and the valve.
- Do not use PTFE-covered gaskets or soft gaskets such as rubber gaskets.
- If the actuator is installed so that its weight falls on the piping (e.g. when horizontally installed), install supports for the actuator and bonnet (especially in the case of extension bonnet and fin bonnet types).
- When fluids over 100C are being used, install insulating materials to the valve body where possible.

Installation Instructions

- Check the direction of flow prior to installation.
- Do not apply pressure to or lean on the lever or gear handle during installation.
- Do not use plastic flanges.
- When installing or removing the valve, keep the disc fully closed.
- Before installation, clean the inside of the pipe and flange surface. Make sure that no welding residue, rust, scaling, or dust remain in the pipe. If possible, install an extension tube with face-to-face dimensions equal to that of the valve in place of the valve and blow the inside of the piping clean with compressed air. Then clean the flanges and re-install the valve.
- Never weld on the up-or down-stream pipes while the valve is installed.
- To prevent stress concentration during the installation process, fix the up-and down-stream flanges after installing the valve in the flange.

Operation Instructions

- If leakage from the gland occurs during operation, immediately retighten the gland nuts. The nuts should be tightened alternately and evenly in a diagonal pattern, to avoid imbalance.
- For room temperature or cold to hot heat cycles, or batch flow such as form the base valve of a steam header, be sure to insulate the valve body. Also, warm up the valve before starting operation.

Rearrangement of Actuator

- When removing and remounting the actuator to change its orientation at the job site, align the marks (punch marking) on the top of the valve and the top of the valve stem to ensure proper positioning for the fully-closed position.

Replacement of Packing

- When replacing gland packing or seat ring, close the base valve and remove the valve from the piping.

Also...

- Before using a valve after it has not been used for a long period of time, open and close the handle once or twice.

Other

- When the valve is closed at lever actuator, fully close until the lever hits the stopper of the indicator.

Rotary Control Valves

Installation Instructions

- For rotary control valves (including butterfly valves), basically the rotation of the disc alters the area of the flow path and thereby controls the flow. Therefore, unlike globe valves, if an elbow or tee is placed upstream from the valve, the valve is directly affected by the disturbed flow and cavitation, noise, vibration, or other problems result. In the worst case, this may cause an imbalance of torque on the valve and result in rendering the actuator ineffective. To avoid these problems, install a straight pipe of a sufficient length (at least 6 to 8D) in the valve up-and down-stream side, and carefully consider the orientation of the valve to minimize the affect of drift. In addition, when installing stop valves in front of and behind the valve, leave a space of at least 6D in between.
- The concave side of the disc (the side with the stem exposed) must face upstream.
- Do not use plastic pipes and loose flanges.
- When installing or removing the valve, keep the disc fully closed.
- It is possible that seat leakage occur when fluid (e.g. powder and/or liquid) is solidified by working temperature and other cause. Consult us.
Please note that use with vertical line such as bottom area of discharge spout of hopper, and tank.

Other

- When the valve is closed at lever actuator, fully close until the lever hits the stopper of the indicator.

507V

Installation Instructions

- Use a gasket when installing the valve.
- If using a diaphragm actuator, the actuator must be installed vertically.

Operation Instructions

- If leakage from the gland occurs during operation, immediately retighten the gland nuts. The nuts should be tightened alternately and evenly in a diagonal pattern, to avoid imbalance.

Other

- When the valve is closed at lever actuator, fully close until the lever hits the stopper of the indicator.

508V

Installation Instructions

- Since no gasket is required, do not install one.
- Valves can be installed in any orientation, to allow for the easiest possible operation of the valve. However, be careful of the orientation of the stem. Also, for valve sizes of 350mm or larger, never install the actuator facing downward. (Refer to "a Handling Precautions".

Operation Instructions

- The pressure rating of the valve body is ANSI Class 300 (50 to 200mm) and ANSI Class 150 (250 to 400mm). However, since the pressure rating for the valve disc and stem is lower, be sure to have the valve in the open position when performing hydraulic pressure testing of the piping.

Other

- When the valve is closed at lever actuator, fully close until the lever hits the stopper of the indicator.

Rotary Control Valves

DTM

Installation Instructions

- Please use spiral wound gasket if spiral wound gasket is used for JIS10K pipe.
- In case of double flanged body, flange outside diameter and thickness may not be in accordance with the flange spec.
- Please insulate the valve body if used for heat cycle operation from ambient, low temperature to high temperature, and batch cycle operation by main valve of steam header.
- When installing a non-return valve, pump and DTM, always insert a short pipe in between. Not doing so will cause the disc to hit during operation and lead to faulty operation.

※Installation Direction in artwork is "B" direction.

- When the drive member is diaphragm, always keep the stem horizontal and the diaphragm facing up.
- Use air purging to clean the flange faces that will contact the valve. If there is rust or some other foreign material sticking to a flange face, clean it with a suitable cleaning fluid (alcohol or neutral detergent, etc.)

If possible, install in the piping a short pipe with a face-to-face dimension identical to the butterfly valve and blow into the pipe to completely remove foreign substances.

- When performing a pressure test, completely open the valve (if using a pressure higher than the rated pressure). Never use a fully closed valve in place of a blind flange. If inserting a blind flange or similar device, take care not to forcibly insert the flange as the flange face may be damaged on the DTM, causing leakage.

Other

- When the valve is closed at lever actuator, fully close until the lever hits the stopper of the indicator.

Chemically Resistant Butterfly Valves

Storage Conditions

- Since PFA•PTFE is easily damaged, do not unpack the valves until you are ready to install it in the piping.

Installation Instructions

- Except for Models 846T and 847T, a butterfly valve should be installed on a pipeline with gaskets in between piping flanges. For the gasket sizes, adhere to the recommended gasket sizes listed in this catalog and always use a gasket sealer to assure reliable sealing.
 - Never use a soft gasket such as rubber gaskets. Doing so may cause malfunctions.
 - When installing or removing the valve, keep the valve disc opened to an approximate 10° angle.
 - It is possible that seat leakage occur when fluid (e.g. powder and/or liquid) is solidified by working temperature and other cause. Consult us.
- Please note that use with vertical line such as bottom area of discharge spout of hopper, and tank.

Other

- When the valve is closed at lever actuator, fully close until the lever hits the stopper of the indicator.

846T/847T

Installation Instructions

- As a rule, these valves do not require a gasket for the pipe flanges. However, if a flange surface is not flat due to scratches, dents, or other such reasons, install a commercially-available gasket.
- However, do not use rubber or other soft gaskets. Doing so may cause malfunctions.

841T/842T

Installation Instructions

- Insert a gasket between the valve and flange. For the gasket size, adhere to the recommended gasket sizes listed in this catalog.
- Do not use rubber or other soft gaskets. Doing so may cause malfunctions.
- After centering the pipes, insert bolts at the proper locations so that the bottom of the valve can rest upon them to prevent the valve from falling through.

Handling Precautions

Rubber Seated Valves

If the fluid contains chlorine, EPDM and NBR seat ring may deteriorate early due to combined factors including density and temperature. In this case, 846T/847T(PTFE seated) is recommended. For details consult us.

Do not use an EPDM seat ring if the fluid contains even a slight amount of oil.

Using an impact wrench

Please be careful when using a high-output impact wrench for installation and tightening piping bolts of rubber seated butterfly valves. Doing so can deform or damage parts such as the valve body, seat ring, piping flange (especially the resin lining pipe) and bolts, depending on the type of impact wrench and how it is used. If you wish to use an impact wrench, use one with a maximum output that is no more than the values (piping bolt strength) given in the table below.

Table1. Use of Metal Flange (Nm)

Bolt dia.	M12	M16	M20	M22	M24	M30	M36
Max. impact wrench output (Nm)	43 or less	106 or less	206 or less	280 or less	360 or less	700 or less	1,240 or less

Table2. Use of Resin Flange / Resin Lining Flange (Nm)

Valve port dia.	Bolt dia.	Recommended torque
40 to 100 mm	M16	40
125 to 200 mm	M20	80
250 to 350 mm	M22	100
400 to 500 mm	M24	130
550 to 600 mm	M30	250

Installation Instructions

- Align the pipes and insert the valve between them.
- Since no gasket is required, do not install one. Installing one may cause malfunctions.
- When installing or removing the valve, keep the valve disc opened to an approximate 10° angle.
- Do not install a butterfly valve with a rubber seat directly to a rubber flexible joint. The direct connection will result in the improper functioning of the valve. In this case, place a spacer or a mating flange on both sides of the valve between the valve and the rubber flexible joints.

Other

- When the valve is closed at lever actuator, fully close until the lever hits the stopper of the indicator.

700Z

Installation Instructions

- After fixing center of both flanges, insert piping bolts and put the valve. (Fig.1)
- To center the piping for JIS 10K flange, insert centering sleeves on the bolts and install the bolts to support the valve at the bottom and prevent it from falling through (only for 40, 50, 65 and 100mm sizes). (Fig.2)

*Use the provided centering sleeves to facilitate the operation.

[Fig.1]

[Fig.2]

Rubber Seated Valves

700G/704G/705G

Installation Instructions

- After fixing center of both flanges, insert piping bolts and put the valve. (Fig.1)
 - To center the piping for JIS 10K flange, insert centering sleeves on the bolts and install the bolts to support the valve at the bottom and prevent it from falling through (only for 100, 125 and 150mm sizes). (Fig.2)
- *Use the provided centering sleeves to facilitate the operation.

[Fig.1]

[Fig.2]

72WG/72SG/72LG

731P/732P/732Q/752W

700E/700K/700S

704G/722F/720F

227P

Storage Conditions

- When stored for a long period of time, the FCD disc (ductile cast iron) and other plated parts (opening/closing board, bolts, nuts, worm shaft, etc.) should be coated with the specified "Ferro Guard" rust preventative once a year.

Installation Instructions

- Avoid solvents from touching the seat ring. Attention must be paid to prevent all materials other than NBR and Viton from being exposed to machine oil.

Handling Precautions

Anti-Vibration Check Valve

MKT

Installation Instructions

- Installation of the MKT immediately after welding the pipe flange will lead to adverse consequences, such as damage to the seating. Make sure that the temperature has cooled sufficiently and that you have removed weld spatter before installing the MKT. Never weld when the MKT is in the piping. (Fig. A)

Fig.A

- The flange may leak if the flange face that contacts the MKT is as shown in Fig. B. Also, please confirm that there is no deformation to the flange or that there is no damage, such as scratches, on the flange surface.

Fig.B

- Excessive weld**
The resulting oversized inner pipe diameter may cause a flange leak.
- Rough surface from grinding**
May cause a flange leak.
- Always be sure to use a piping gasket. The piping gasket will enter the piping inside and cause malfunction if a rubber or similar soft gasket is used. Therefore, make sure that the piping gasket does not enter the radius of MKT plate operation. (Fig. C)

Fig.C

(Table 1) Plate operation radii

Nominal size		R	A	F#1
mm	inch			
50	2	29.0	30.0	0.0
65	2 1/2	36.3	36.0	0.0
80	3	43.2	40.5	0.0
100	4	53.3	38.0	10.5
125	5	66.0	47.5	13.5
150	6	78.9	53.5	20.0
200	8	104.2	72.0	24.5
250	10	129.8	83.5	30.3
300	12	154.5	110.0	23.0

※ 1. "0" when disk does not fly out.

- Align the MKT to the flanges accurately. Malfunction can occur if the pipe edge or piping gasket enters the radius of MKT plate operation.
- Do not apply strong shock such as by throwing the MKT.
- When installing butterfly valve and MKT, always insert a short pipe in between. Not doing so will cause the disc to hit during operation and lead to faulty operation. (Fig. D)

Fig.D

- Direct installation on the pump is possible, but please be sure to follow the cautions below.
 - If the flow rate distribution is uneven immediately after the spiral pump, etc., make the flow rate distribution that is received by both plates of the check valve equal by installing so that the changing direction in the flow rate distribution is parallel to the hinge pin direction, as shown in (Fig. E)
 - An average pump exit flow rate as a using conditwn must be no more than 10 m/sec (fresh water).
 - If fluids exceed a flow rate of 5 m/s, cavitation may occur from the check valve. Therefore, separate the valve or other device on the downstream side by at least 2D when installing.
 - Be careful of pressure loss in the check valve. (Refer to the Head loss vs. Flow table.)

Fig.E

- Please consult us when the velocity flow by liquid exceeds 10 m/sec.
- Seat leakage may occur if the difference pressure is less than 0.04 MPa.
- Make sure no solvent gets onto the seat ring. If EPDM rubber is used, always keep the seat ring away from any machine oil. (The rubber material shows on the name plate).
- When installing the check valve, the installation direction should be in accordance with the following.
 - For a horizontal installation make sure the check valve hinge pin is vertical. (Fig. F)

Fig.F

- For elbow or pump exit installations, make surely the influence of the flow rate on the plate to be well balanced. (Fig. G)
- For installations on the downstream side of butterfly valves, make surely the valve shaft of the butterfly valve and the hinge pin of the check valve crosses alternately.

Fig.G

Although vibration caused by the pump and fluid will not affect MKT series valves, please install flexible piping or similar one in order to prevent any downstream piping and devices from vibration affecting.

Wafer Check Valves

901C/903L/905L

Installation Instructions

- Install the valve so that the cast marking on the body of the Bata-Check corresponds with the flow direction. (Fig. 1)
- Vertical installation is also possible.

Fig.1

- For horizontal installation, have the rib of the Bata-Check aligned vertically. (Fig. 2)

Fig.2

- Always place an extension pipe between a Bata-Check valve and butterfly valve. Never connect the two valves directly together. (Fig. 3)

Fig.3

- Make sure that the end of a pipe or gasket does not come within the operating radius of the plate of the Bata-Check valve. (Fig. 4)

Fig.4

- When mounting a reducer in front of a Bata-Check valve, have a space of 5 times the valve diameter (5D) or more, or at least 2 to 3D between the valve and reducer. (Fig. 5)

Fig.5

- When installing a Bata-Check valve near an elbow, have as large a space as possible between the elbow and the Bata-Check valve. Also, make sure that both plates are stressed evenly by the flow. (Fig. 6)

Fig.6

- When installing a Bata-Check valve at the outlet from a pump, leave a space of at least 6 times the valve diameter (6D) between the valve and pump. Also, make sure that both plates are stressed evenly by the flow. (Fig. 7)

Fig.7

- Consult us when the liquid velocity flow exceeds 3m/sec.
- Seat leakage may occur if the pressure difference is less than 0.02Mpa.

Handling Precautions

Actuators

Motorized Actuators

Handling Precautions

- The built-in spare limit switch for the fully opened and closed positions of the motorized actuator (non-voltage output switches for the fully opened and closed positions) is adjusted at the factory to output approximately 2% ahead of the position for actual sealing at the rated pressure. This is done to activate the limit switches with different cams. Since the positioning switch and opening angle detection switch must not activate simultaneously, the spare limit switch is set to always activate first. Therefore, if this output is used to stop the motor or signals, the valve will stop at that position and the sealing ability will be compromised. If your control requirements or other factors require that valve positioning be determined by the spare limit switches, be sure to inform us at the time of ordering. We will then adjust the output position for the spare limit switch to correspond to the fully closed position.
- Each electric motor actuator should be operated by an independent circuit breaker or relay. If more than two electric motor actuators are operated by one circuit, erroneous operation may result due to a loop circuit.

- Prepare a protection cover for the electric motor actuator to protect it from any corrosive fluid, such as cooling water with hypochlorous acid that spreads out from a cooling tower directly. If no protection is provided, the sealing parts and actuator housing may become damaged.
- Prevent hunting of electric motor actuator with proper PID adjustment when employing it for proportional control purposes. Otherwise, the life of the valve and actuator will shorten due to wearing of the friction and connection parts.

New ELMY

Handling Precautions

- Perform the wiring in accordance with the diagram on the inside of the casing cover. After completing the wiring, verify the wiring connections carefully to make sure there are no mistakes.
- To prevent rainwater and the like from entering the unit at the two wiring outlets (G1/2), take the appropriate measures to assure a watertight seal.
- Every cover of the actuator is sealed with an O-ring sealing gasket. Take care not to damage the gaskets during disassembly or assembly of the actuator.
- Except for the top cover, all the screws for the covers have a sealing agent applied to them to prevent the screws from working loose. When removing a screw, take care not to strip the head of the screw with the screwdriver. Also, when installing a screw, apply a sealing agent to the screw and then install it.
- When adjusting the open/close limit switch, be sure to release the lock nut on the stopper bolt and then loosen the stopper bolt by 4 to 5 turns.
- Make a 0.5 second interval when reversing the electric motor actuator from intermediate position utilizing a potentiometer. Surge current generated from a motor may create some damage to the switching relay when reversing it. Modifications to the reduction gear or upgrading of the actuator may be required. Consult us.
- Each electric motor actuator should be operated by an independent circuit breaker or relay. Erroneous operation may be caused by a loop circuit if more than two motor actuators are operated by one circuit breaker or relay.
- Manual operation unit should be used after the power supply is cut. It may suddenly turn if the power is supplied.

Actuators

New MICOM ELMY III

The “WARNING” mark indicates the possibility of death or serious injury.

- Before wiring the actuator, make sure that the power supply matches that listed on the specifications plate on the actuator. If the wrong voltage is supplied, it may cause the actuator to burn out.
- Be sure to connect the earth terminal to avoid electrical shocks.
- To prevent rainwater and the like from entering the unit at the two wiring outlets (G1/2), take the appropriate measures to assure a watertight seal. If moisture enters the unit, it may damage the actuator or cause it to burn out.
- If you need to touch a dip switch or reset a switch for adjustment or inspection, do not touch any other components or terminals on the circuit board. Careless touching of components or terminals may cause electrical shocks.

The “CAUTION” mark indicates the possibility of serious injury or damage to equipment.

- All necessary settings are completed prior to shipment from our factory. If any modifications or adjustments are required, follow the directions given in the instruction manual. Incorrect procedures may cause improper operation or damage to the components.
- When wiring the actuator, be sure to follow the circuit diagram. Be sure to then verify that there are no mistakes before supplying power to the actuator.
- The input and output signal wires in the unit built into the actuator are not insulated. If insulation is required, install a converter on the outside of the unit. Not doing so may cause improper operation.
- When setting the dip switches, do not apply excessive force as this could damage the switches.
- The input signal has preference over the contact input of a 4 to 20mA signal. If the 4 to 20mA signal is used for control, then be sure to eliminate the contact signal. Failure to do so may cause improper operation.
- When two actuators are controlled by one input signal, make sure that the signal is within the allowable load resistance of the output side. Failure to do so may cause improper operation.
- Do not apply loads over the capacity of output contacts for the opening angle, alarms, or stop signals.
- There are times when the surface of the actuator becomes hot during operation. This is caused by the heat from the internal motor and not due to a malfunction. However, if valve operation is more frequent than the allowable amount, the temperature alarm may sound and cause a compulsory stop.
- Every cover of the actuator is sealed with an O-ring sealing gasket. Take care not to damage the gaskets during wiring or inspecting of the actuator. The sealing properties will decrease, which may lead to malfunction.
- Except for the top cover, all the screws for the covers have a sealing agent applied to them to prevent the screws from working loose. When removing a screw, take care not to strip the head of the screw with the screwdriver.

Pneumatic Actuators

The “WARNING” mark indicates the possibility of death or serious injury.

This unit should be handled by well-versed and experienced technicians only.

- Compressed air is hazardous if wrongly handled. A machine or a unit utilizing compressed air should be handled by a well-trained professional technicians only.

Handling or dismantling of the unit should not be carried out before confirming the safety precautions.

- Inspection and maintenance should commence only after acknowledgment of safety precautions such as preventions against falling of parts or material or other accidental happenings.
- The unit should only be dismantled after confirmation of the above safety precautions and after removal of the air supply and power sources.
- Before restarting of the unit, ensure that the action of the movements are in a safe and normal position.

Handling Precautions

- During installation, make sure that no dust or any foreign matter enters through the air port.
- When attaching joints to taper screws on the air port, make sure that you screw them in properly and straightly. Do not overtighten as you may damage the threads. Also, be careful during the initial threading to ensure the proper catching of the threads.
- Use a speed controller to control rotating speed. Use a pressure reducing valve for speed adjustment.
- In the airline, install an air filter to remove any moisture or dust from the air. Moisture or dust will deteriorate the valve and shorten its operating life.
- Avoid use in ambient temperatures over 80°C. Use in such high temperatures may cause malfunctions.
- Do not subject the cylinder or peripheral components to excessive forces such shocks or impacts with other objects.
- This cylinder is a non-lubricated type, however, you may provide lubrication for the protection of peripheral equipment. (Use JISK-2213 turbine additive oil No.1, No.2, or similar oil. Never use spindle oil or machine oil, as they deteriorate the O-rings and other rubber components.)
- Periodically check and retighten the bolts.
- Check and clean the actuator once a year even if it is not or has not been in use.
- If an external or internal air leak occurs during operation, inspect the actuator and check the condition of the O-rings and look for abrasion of the moving parts. If any component is damaged, replace it with a new one right away.

New I-DYNAMO

Handling Precautions

- The hexagonal bolts that retain the cover must not be slackened.
- On single acting types, removal of the cover will cause the spring to eject out, due to its tensile strength impact and may cause injury or damage. In case of abnormal operation of the unit, customers are requested to contact our sales department.
- In the case of single acting actuators being installed outdoors, a rain-prevention precaution is required: the elbows on the air inlet/outlet ports should be oriented downwards, for example.
- When the case and the beas plate are separated, applying screw slack inhibitor to bolt before re-assembly.

Handling Precautions

Condition Monitoring Unit

Tom Probe Series

The **"WARNING"** sign indicates possibility of death or serious injury.

- This product is not explosion-proof, and cannot be used in an explosion-prone area.

The **"CAUTION"** sign indicates the possibility of serious injury or damage to components.

Wiring Precautions

- Wiring should be performed by experienced technicians with electrical knowledge and only in accordance with local laws and regulations and each company's wiring and electrical work codes.
- Perform the wiring while the power is off. Otherwise electrical shocks may be caused.
- Before commencing the wiring, make sure that the power supply matches that listed on the specifications plate on the product. If the wrong voltage is supplied, the product may burn out.
- Do not use force to pull on the cables emerging from the cable gland. Otherwise, the interior of the main unit will be damaged, which may cause malfunctions.
- Before commencing the wiring, remove shavings, cutting oil, dust, etc. from the inside of the conduit.
- When performing the wiring, be sure to follow the circuit diagram. On completion, be sure to verify that there are no errors before supplying power to the product.
- Each cover is sealed with waterproof packing. Be careful not to damage the waterproof packing during wiring and inspection. Otherwise, sealing capability may be degraded, which may cause malfunctions.
- For electrical wiring from the power source, the voltage required for the device may be insufficient due to a drop in voltage caused by current fluctuation or power line resistance. Please design appropriate wiring at the planning phase to ensure correct supply voltage to the product.
- Ensure that each unused wire is insulated. If multiple wires are insulated together or an unused wire is not insulated properly, it may cause electrical shocks or a fire.
- If the switching contact output is at or below the minimum operating load, it may not overcome the oxide film, etc. which forms on the surface of the relay contact, and this may cause contact failure.
- As in the case of general relays, when an inductive load such as a DC motor and a DC solenoid is connected, the contact should be protected with a diode which absorbs surges, etc.

Precautions Regarding Initial Setting

- The valve opening/closing position depends on valve installation and piping design, and the full opening/closing position after installation may differ from the full opening/closing position before installation. To set the opening/closing position correctly, be sure to utilize the opening/closing position learning function after the valve is connected to the piping. This function opens/closes the valve automatically to detect the valve's full opening and closing positions. Before commencing this function, ensure that the valve opening/closing will not cause injury or impact on the system.
- For the communication network, communication is performed using our company's dedicated protocol via RS485.

- For the RS485 node network, configure the network in the daisy chain or bus topology. Design the wiring to keep the length of the branch lines from the trunk line as short as possible.
- For TPro1100 and TPro1700, a termination resistor is included in the interior of the device. For those devices which are located at the end of the daisy chain network, the terminator should be effective (ON side).
- If there are two or more nodes on the same communication network whose local network ID is the same, communication cannot be established correctly.
- If 0 is selected for the local network ID, communication is established with no devices.
- All of the data is recorded using information from the built-in calendar and clock in TPro1100. Thus the date and time must be set correctly.

Precautions After Starting Operation

- Improper attachment of the USB waterproof cap may allow entry of rainwater into the interior of the unit or allow corrosion inside the connector, which may lead to malfunction.

Maintenance Precautions

- Before commencing maintenance, ensure that the valve opening/closing will not cause injury or impact on the system. In particular, ASF performs a partial stroke test where the valve is automatically opened/closed slightly, based on the calendar in TPro1100. Perform maintenance after ensuring that ASF operation cannot cause injury or impact on the system.
- Before sending the product for repair, be sure to disable ASF. If this function is not disabled, a repair engineer may be injured when the valve is automatically opened/closed slightly, based on the calendar in the main unit.
- Before commencing disassembly, be sure to turn off the power to the unit, and take necessary precautions so that the valve cannot be operated. Otherwise, electrical shocks or malfunctions may be caused.

Guideline for Inspection of Our Products

Warranty period for our products is described in this catalog in "Warranty Period" under "Before Placing Your Order". For inspection of our products, please refer to the following as a guideline (only if the product is used with clean water at room temperature and at a pressure less than the rated pressure of the valve). Initial performance retention life (inspection interval) is shown below. Please perform inspection and maintenance at every inspection interval.

■Concentric rubber seated butterfly valves (valve bodies)

Rubber seated valves are based on JISB2032 (wafer type rubber seated butterfly valves).

"After maximum operating hydraulic pressure is applied using clean water with the valve fully closed at room temperature and then repeating full opening/closing operation of the valve 10,000 times, no leakage shall be observed from the seat at 1.1 times the maximum operating pressure." (Excerpt from JISB2032-2009)

The life of the valve may be shortened if the ambient temperature is 50°C or higher, if the fluid is corrosive, viscous and adherent, or if the fluid contains foreign or solid substances. [Table 1] [Table 2]

[Table 1]

Inspection interval if valve seat ring cannot be replaced	NAV series (Note 1)	High pressure valves with vulcanized seat	Check valves
	700Z series NAV series	731P, 732P, 733P	901C, 903C, 905C, 906C, 907H, 908H, 903L, 907L
Initial performance retention life (inspection interval) (Note 2)	Inspection interval is one year or 10,000 cycles of opening/closing, whichever comes first. Check for external leakage, loose bolts, valve seat leakage and abnormal operation. If any abnormality is found, detach the valve from the piping and check for corrosion of the valve body and wear of the seat ring. If any abnormality is found in these parts, replace the valve.		

[Table 2]

Rubber seated valves other than those above
Inspection interval is one year or 10,000 cycles of opening/closing, whichever comes first. Check for external leakage, loose bolts, valve seat leakage and abnormal operation. If any abnormality is found, detach the valve from the piping and check for corrosion of the valve body and wear of the seat ring. If any abnormality is found in these parts, replace consumables such as seat ring and packing. Performing the above maintenance can extend the valve's life to more than 10,000 cycles.

■Double eccentric valves (soft seated valves)

The level of performance and functionality at the time of shipment can be maintained until 3,000 cycles of opening/closing. However, this designed lifetime could become shortened depending on temperature conditions and type of fluid (corrosiveness, viscosity, solid matter and deposit).

Inspection interval is one year or 3,000 cycles of opening/closing, whichever comes first. Check for external leakage, loose bolts, valve seat leakage and abnormal operation. If any abnormality is found, detach the valve from the piping and check for corrosion of the valve body and wear of the seat ring. If necessary, replace consumables such as seat ring and packing.

Retighten gland packing, bottom cover bolts and piping bolts if needed.

■Double/triple eccentric butterfly valves (metal seated valves)

Regulations on seat leakage described in the valve specification are inspection standards at the time of shipment.

Leakage rate may increase depending on ambient temperature, pressure condition and type of fluid. Perform maintenance on sealing parts: their life is 3,000 cycles of opening/closing at most. (Replace them if needed.)

Inspection interval is one year or 3,000 cycles of opening/closing, whichever comes first. Check for external leakage, loose bolts, valve seat leakage and abnormal operation. If any abnormality is found, detach the valve from the piping and check for corrosion of the valve body and wear of the seat ring. If necessary, replace consumables such as seat ring and packing.

Retighten gland packing, bottom cover bolts and piping bolts if needed.

■Actuators (gears, levers) 1L, 1T, 1G, 1J, 2U, 2K, 2S, 2E

These parts are basically maintenance-free, but if the valve is frequently opened and closed (more than 10,000 cycles per year) or used in a bad environment (saline or moist environment), check for corrosion and loose bolts every 10,000 cycles or one year by visual inspection. If any abnormality is found, follow the instruction described in "All actuators" below.

■Actuators (cylinders) 7E, 7G, 7F, 3A, 3K, 3U

Inspection interval is 50,000 cycles of opening/closing or one year. If any abnormality is found, follow the instruction described in "All actuators" below.

■Actuators (motorized actuators) 4I

For other motorized actuators, please contact us.

Inspection interval is 30,000 cycles of opening/closing or one year. If any abnormality is found, follow the instruction described in "All actuators" below.

■All actuators

If any abnormality is found, open the lid of the actuator's reducer and check for ingress of water, discoloration of grease and damage to gears. If needed, perform maintenance such as greasing. If water ingress or gear damage is found, replace the actuator. For further information, refer to the instruction manual of each model. [Table 3]

■Status Monitoring Unit (Tom Probe) TPro1100, TPro1700

At least once a year, check for loosening of the mounting bolts for the main unit. If loose bolts are found, retighten them.

Check for loosening of the cable gland where the wires exit.

If the cable gland has loosened, retighten it.

Handling Precautions

Guideline for Inspection of Our Products

[Table 3]

Type of products	Inspection interval and initial performance retention life (cycles of opening/closing or usable years)	Type of maintenance
700Z series (Note 1)	10,000 cycles or 1 year	Appearance check Replacement of valve
Valves whose seats cannot be replaced (Note 2)	10,000 cycles or 1 year	Appearance check Replacement of valve
Concentric rubber seated butterfly valves (other than the above types)	10,000 cycles or 1 year	Appearance check Replacement of consumables
Double eccentric valves (soft seated)	3,000 cycles or 1 year	Appearance check Replacement of consumables
Double/triple eccentric valves (metal seated)	3,000 cycles or 1 year	Appearance check Replacement of consumables
Manual actuators (gears, levers)	10,000 cycles or 1 year	Appearance check Greasing, etc.
Automatic actuators (cylinders)	50,000 cycles or 1 year	Appearance check Replacement of consumables Greasing, etc.
Automatic actuators (motorized)	30,000 cycles or 1 year Predetermined inspection needed	Regular inspection Check for abnormality Greasing, etc.

Life of valves is based on the extent of their use with clean water at room temperature and below rated pressure.

Usage condition of actuators, such as the ambient environment, should be within the range described in each specification and should not be in corrosive atmosphere (Note 3) (including installation near the shore).

If you need to use the product outside the above range, please check with us before placing your order.

Note 1) 700Z series: 700Z, 700ZK, 700ZS, 700ZJ, 700ZY, 700YJ
NAV series: 763Z, 773Z, 775Z, 775J, 776Z, 778Z, 778J, 779Z, 779J, 783Z, 785J, 788J

Note 2) Models whose rubber seats cannot be replaced are the following:

700Z series: 700Z, 700ZK, 700ZS, 700ZJ, 700ZY, 700YJ
NAV series: 763Z, 773Z, 775Z, 775J, 776Z, 778Z, 778J, 779Z, 779J, 783Z, 785J, 788J

731P series: 731P, 732P, 732X (vulcanized seat)

Check valves: 901C, 903C, 905C, 906C, 907H, 908H

Note 3) Corrosive atmosphere means an external environment that includes gases that corrode metal, rubber and resin (e.g. chlorine, saline air, etc.) or an environment in which the products are constantly exposed to water.

Note) For further information on inspection and disassembly, please refer to the instruction manual.

Note) The cycle described above means a repetition of opening/closing of a valve including full closing. The cycle does not include repetition of slight controlling movements with the valve half open. In such a case, each usage needs to be considered.

Information on discontinued models

Information on discontinued models is provided below.

TRITEC

150 / 300 / 600 /
900 / 1500 /
2500lb Range

Features and Benefits

- Triple offset and ellipsoidal sealing Geometry
- Bi-directional bubble tight shut-off
- Inherently Firesafe
- Developed Geometry results in
 - Zero Seat/Seal Friction
 - Low Torques
 - Extended Service Life
 - Continued Seal through Thermal Cycling
 - Torque Seating
- Excellent flow and throttling characteristics covering services from Cryogenic to high temperature
- Excellent control of Fugitive Emission by virtue of Rotary stem movement and advanced packing materials
 - Less than 50ppm on Fugitive
 - Emission Test to cover EPA21
 - Other tests available on request
- Firesafe meet API Std 607 4th / 5th Edition and BS 6755 part 2 / API 6FA
- Available Fully Rated to Class 2500Lb
- Fully rated for end of line duty
- Standard materials conform to NACE, all exotic materials also available
- Laminated seat is mounted in the body, removing it from the erosive effects of the flowing media
- Seat is self centering "floating" design
- Both Seat and Seal are field replaceable without special tools
- Unique elliptical bolting pattern allows foolproof replacement of seat and seal
- Gasket Sealing Face is completely uninterrupted by fixings
- Suitable for use with Spiral Wound gaskets and all flange finishes including RTJ
- Antiblowout device on shaft with both internal and external retaining systems according to API Std 609
- ISO mounting flange allows easy fitting and changing of operators
- Operator is bolted and doweled to prevent radial movement and subsequent loss of seating torque
- Body counterbore and seat bolting arranged elliptically to ensure equal support, gasket land and gasket loading all around the elliptical edge of the laminated body seat
- Inboard and outboard thrust mechanisms prevent decentralising of disc, even under high temperature and line pressure
- By eliminating seat-seal friction on unseating, Tritec removes the "Blind Zone" and increases the rangeability or controllable range to the full 90° of movement. The rotation geometry and inboard bearing design reduce the effect of dynamic torque and mechanical noise-vibration, increasing midrange control accuracy. Cavitation and Noise reducers are available to complement the Tritec valve under high pressure drop process situations

Offset Valve-Disc / Seat Friction

Tracing the evolution of Triple Offset design

The centre of rotation is moved back from the centreline of the valve disc. The seat and seal are designed conically and on centre. This design relies on a frictional interference seal and so is applicable only to soft seated valves.

The centre of rotation is moved from the centerline of the valve body. The seat and seal design remains conical and on centre. This design again relies on a frictional interference seal, but the length of rotation over which this friction occurs is reduced, allowing a larger range of process resistant seat materials to be used. However, these materials must be relatively soft or highly elastic to prevent "jamming".

The centreline of the cone is rotated away from the valve centreline resulting in an ellipsoidal profile and providing the third offset. With this geometry, seat seal interference is completely eliminated ensuring long sealing life. The result is a torque seated, process-pressure-aided FRICTIONLESS seal. The geometry allows the body seat to be used as the closed limit stop, aiding operator adjustment. The Triple Offset design is ideally suited to metal seated valves providing bubble-tight performance in high temperature, high pressure and firesafe applications.

※1. Please contact the sales office for larger sizes.

※2. JIS 10K, 20K, 30K MSS, API, BS, DIN, PN, ISO also available on request.

※3. ISO 5752 Gate Valve Short (Basic series 3) on request.

※4. Use Inconel 718 for over 315 degrees C.

※5. Titanium nitride hardened, Stellite #6 Coating is available as an option.

※6. Please consult our sales for the service condition lower than -46°C.

Design Options

DOUBLE BLOCK & BLEED VALVES.(DBB2)

To allow verifiable, maintainable shut-off in critical isolation applications. Fire tested to AP16FA & AP1607.

BUTT WELD WITH TOP ENTRY.

Allowing complete maintainability on valves which are welded into line.

DOUBLE BLOCK & BLEED VALVES COMPACT VERSION (DBB1)

One valve with a unique double seat assembly and integral bleed port.

Design Options

CONTROL VALVES.

Frictionless seating means increased rangeability, allowing the Tritec valve to perform in both control and isolation application.

FIRE SAFE DESIGN.

Fire safe approval to API 6FA and API 607.

STEAM JACKETED VALVES.

To maintain process temperature ensuring media remains liquid. Disc and shaft steam tracing as an option.

Full-Jacket type

Semi-Jacket type

VALVES TO REDUCE FUGITIVE EMISSION.

Designed to reduce fugitive emission, testing is available to all international standards plus customer specific requirements.

GATE VALVE FACE TO FACE.

For the direct replacement of gate valves, all dimensions are exactly as per the standard Double Flanged valve with the exception of the face to face dimension which is shown below. (in accordance with ISO 5752 gate valve short).

(Unit: mm)

Valve Size		150Lb	300Lb	600Lb	900Lb	1500Lb
		Flanged	Flanged	Flanged	Flanged	Flanged
mm	inch	Gate F-F	Gate F-F	Gate F-F	Gate F-F	Gate F-F
50	2	178	216	—	—	—
80	3	203	282	356	—	—
100	4	229	305	432	457	—

300	12	356	502	838	965	1130
350	14	381	762	889	1029	1257
400	16	406	838	991	1130	1384
450	18	432	914	1092	1219	1537
500	20	457	991	1194	1321	1664
600	24	508	1143	1397	1549	1943

Allows direct replacement of existing gate valves without modification of pipework.

Disc remains within the body face to face in the fully open position to allow removal of the valve from pipework even when the valve is open.

Reduction of fugitive emission due to quarter turn rather than linear shaft movement.

Reduced operator costs due to quarter turn rather than multi turn / linear.

Operating and Maintenance Instructions

INTRODUCTION

This instruction provides general information on the operation, installation and maintenance of the Tritec triple offset valve. The Tritec valves have been designed and manufactured to operate in an aggressive environment under extremes of temperature and pressure for long periods and with minimal maintenance.

INSTRUCTIONS

PACKING

1. All valves will be despatched with protective covers attached to the flange faces to protect the gasket sealing surfaces and internal trim.
2. The valve disc is cracked off the seat in the almost closed position.
3. The Tritec nameplate shown in the picture contains information such as size, pressure class, materials and the unique serial number.

SPARE PARTS

1. When ordering spare parts or discussing matters concerning this valve with the sales office, it is essential to quote the unique Serial Number of the valve which is to be found on the stainless steel nameplate attached to the valve body adjacent to the operator.

TRANSPORTATION

1. Use crates or packing cases for ocean transportation.
2. For overland transportation, a covered vehicle is recommended with protective sheets covering the valves.

STORAGE

1. Store the valves indoors in a cool temperature between -10° and $+60^{\circ}\text{C}$, humidity at 70% or less.
2. Do not remove the protective covers until ready to install valves.
3. Machined ferrous surfaces are protected with an approved rust preventative. For long periods of storage, apply the rust preventative once a year to the unpainted surfaces.
4. When storing valves unpacked, take care in protecting valves and actuators from excessive loads. Do not stack unpacked valves.
5. If the valve is for clean gas duty and is being supplied "DEGREASED", a label is attached stating this and the valve sealed in a polythene covering. It is suggested that the valve is kept packed until it is to be installed in the pipeline.

UNPACKING

1. Unpack valves just before installation.

INSTALLATION

- The valve is designed to seal against bidirectional flow and can therefore be installed with flow in either direction. However enhanced sealing life will be obtained with upstream flow against the shaft side of the disc. This preferred flow direction is shown on the nameplate attached to the valve body adjacent to the operator and also on the GA drawing. The valve may be installed in the pipeline with the valve shaft in a horizontal, vertical or intermediate position.
- Prior to installation, the pipeline must be cleaned from dirt and welding residues to avoid damage to the valve during operation.
- Ensure that the valve is closed prior to installation to avoid the risk of damage to the sealing surfaces.
- The valve must be lifted by the eyebolt or lifting eyes provided with the valve.
- The valve must not be lifted by the operator or handwheel.
- The valve must not be used for pipework alignment.
- The Lugged or Double flanged type valve is suitable for dead end service ie. end of line duty, in either direction (in case of the valve specified both directions) to the full rating pressure of the piping system.

Always at the leading edge

Through an extensive commitment to Research & Development, TOMOE has remained at the leading edge of valve design for more than 50 years. The TT2 Triple Offset process valve is the result of advanced technology design and stringent testing to develop a valve that meets the high performance demands of applications where long life and positive shut-off under arduous conditions is essential.

The TT2 inherits the torque sealing, friction-free sealing design of other valves in the TT series and the unique triple offset and ellipsoidal sealing geometry guarantees zero leakage and bubble-tight shut-off.

In addition, the compact, lightweight design of the TT2 triple offset valve has revolutionised design and maintenance of piping systems in the OPC industry.

Smaller and lighter than traditional ball, globe and gate valves, the TT2 features a fully field-replaceable seat and seal design for increased plant efficiency and reduced cost of ownership.

Available in Wafer, Lugged and Double Flanged type body styles to 150 lb and 300 lb pressure ratings, the TT2 triple offset valve has fire safe certification to API607 5th Edition, making it inherently safe in high risk industry applications.

Features and Benefits

- Zero leakage with metal seat
- Compact, lightweight design
- Fully field replaceable seat and seal design
- Longer life cycle
- Fire Safe Certification to API607 5th Edition

Pressure-Temperature Ratings

Standard Specifications

Design	API 609 Cat. B, ASME B16.34	
Nominal diameter ^{*1}	3" (80mm) to 24" (600mm)	
Pressure rating	Class 150, Class 300	
Body style	Wafer, Lugged and double flanged, short and long	
Applicable flange standard ^{*2}	ASME B16.5/JPI Class 150/300 JIS 10/16/20/30K BS4504 (DIN) PN10/16/25/40	
Face-to-face dimensions ^{*3}	Wafer, Lugged : API609 Category B Class 150/300. Double flanged : ISO 5752/API 609 Category B, double flanged short pattern Class 150/300	
Pressure-temperature rating ^{*4}	ASME B16.34 Class 150, 300lb, API609 Class 150, 300lb. Operating temperature (standard specifications): -29 to 538 degrees C (A216-WCB), -29 to 600 degrees C (A351 CF8M)	
Pressure test	Main body pressure and seat leakage test: API598. Allowable seat leakage: Preferred; API 598, ISO 5208 rate A, ANSI/FCI 70-2 Class VI.	
Fire safe	Fire Safe Certification based on API 607 4th / 5th Edition	
Actuator	Manual Gear, Electric, Pneumatic, Hydraulic	
Flow direction	Bi-directional (However, the standard pressure direction is for high pressure at the stem side. Selection of the drive section will differ depending on the pressure direction.)	
Applicable gaskets	Use a spiral gasket. ASME B16.5/JPI Class 150/300 commercial products may be used. Please consult us regarding JIN, BS and DIN.	
Standard materials	Body	A216 WCB or A351 CF8M
	Disc	A216 WCB or A351 CF8M
	Stem ^{*5}	A564 type 630 H1150+H1150
	Body seat	316SS / Graphite
	Disc seal ^{*6}	316SS
Coating	Silicon resin coating (Grey N7) for 200 degrees C and lower. Heat resistant silver coating for over 200 degrees C. No painting for stainless steel.	

*1 Except for 5" (125mm), 22" (550mm)

*2 Please consult us regarding JIN, BS and DIN lugs and double flange types

*3 Long-pattern types can be manufactured to your desired specifications

*4 400 degrees C or less in an oxidized atmosphere

*5 Use Inconel 718 for over 400 degrees C.

*6 Titanium nitride hardened, Stellite #6 welding is available as an option

* Valve stem position : horizontal position.

Note: Bolt/Nut material: SNB7/S45C

Please use a nut with a height that is 100% of the screw diameter.

The bold length calculation is based on use of a 4.5 mm thick spiral gasket.

The flange thickness calculation is based on the standard steel flange thickness.

Quantities shown are for one valve.

Examples

Setting bolts: 8 - M16 × 75 (13 × 8)

Long bolts: 4 - M16 × 145

450	18	8-1 1/4-8UN×145(24×16)	40-1 1/4-8UN×165	48
500	20	8-1 1/4-8UN×145(24×16)	40-1 1/4-8UN×175	48
600	24	8-1 1/2-8UN×175(30×20)	40-1 1/2-8UN×195	48

Note: Bolt/Nut material: SNB7/S45C

Please use a nut with a height that is 100% of the screw diameter.

The bold length calculation is based on use of a 4.5 mm thick spiral gasket.

The flange thickness calculation is based on the standard steel flange thickness.

Quantities shown are for one valve.

Examples

Setting bolts: 8 - M16 × 75 (13 × 8)

Hexagon bolts : 4 - M30 × 95

TT2 Piping gasket

* In case of spiral gasket

For API, JPI, ANSI flange Any standard gaskets with inner/outer ring can be used.

For JIS, BS, DIN flange Use special spiral gasket shown below.

MEMO

High Performance Butterfly Valves to suit API standard 150lb/300lb Rating

334A

Valve nominal size

50 to 600mm

Max. working pressure MPa
0

Working temperature range °C

FS Fire safe certification to API607 4th Ed.

Features and Benefits

Double Offset PTFE Seated
High Performance Butterfly Valve to Suit API
Standard Fire Safe Certification As Optional

General description

Designed to suit those severe conditions such as high temperature, high pressure or high velocity which disallow the use of soft resilient seated butterfly valves. Ideal for use including chemical processes, and applications with low pressure steam and high temperature gas. The valve is available for 150 and 300 LBS.

Double offset geometry

The design exhibits tight shut off, reduced torques, chemical resistance, excellent throttling capabilities, and the ability to operate with relatively high pressure drops.

Valve nominal size: 50, 80mm to 600mm
Max. working pressure: 150Lb: 2.0MPa, 300Lb: 5.1MPa
Working temperature range: 29 degrees C to 232 degrees C

Characteristics

Fire safe certification to API607 4th Ed.

50mm : API607-5th edition Fire safe
80~600mm : API607-4th edition Fire safe ※

※ 300Lb-150mm/water body which standard is JIS16K/20K not be Applicable Fire safe. (it can not have necessary thickness.)

RPTFE as standard

334A Fire Safe Seat (API607 4th Ed.)

Standard Specifications

Product characteristics		Double offset soft seated butterfly valve	
Connection		Wafer type / Lugged type	
Nominal valve size ※1		50, 80, 100, 150, 200, 250, 300, 350, 400, 450, 500, 600mm	
Applicable standards	Face-to-face dimensions	80~600mm: API609 Class150/300 Category B 50mm: API609 Category A, ISO5752 Wafer butterfly valve	
	Flange standards (Wafer)※2	150Lb: ASME/JPI Class150, JIS 10K/16K/20K, BS 4504 PN10/16, DIN PN10/16 300Lb: ASME/JPI Class300, JIS 20K/30K, BS 4504 PN25/40, DIN PN25/40	
	Actuator attachment	ISO5211/1 (other than 300Lb-600mm)	
	P-T rating	ASME B16.34 / API609	
Applicable fluid		General hydrocarbon, Chemical process, steam, gas etc.	
Max. working pressure		150Lb: 2.0MPa (Body material : Both WCB and CF8M) 300Lb: 5.1MPa (Body material : WCB), 4.96MPa (Body material : CF8M)	
Working temperature range		-29 degree C to 232 degree C	
Pressure direction		Standard pressure direction : Pressure on retainer side	
Test Pressure	Shell test	Working pressure x 1.5 times (Hydrostatic pressure)	
	Seat leakage	0.7MPa(Air pressure) Based on API598-8thEdition Option : Working pressure x 1.1 times (Hydrostatic pressure)	
Standard Materials ※3	Body	ASTM A216 WCB	ASTM A351 CF8M
	Disc	ASTM A351 CF8M with hard chrome plating	
	Shaft	SUS420J2 ※4	630SS H1150 ※4
	Seat ring	RPTFE(Carbon graphite contained)	
	Retainer	S35C ※4	316SS ※4
	Gland Packing	Graphite	
Shaft shape for actuator connection		150Lb: 50mm to 250mm : Square / 300mm to 600mm : Key 300Lb: 50mm to 150mm : Square / 200mm to 600mm : Key	
Actuator		Lock lever, Worm gear, Pneumatic cylinder, Electric motor	
Coating		Silicon resin coating (Grey N7) for 200 degrees C and lower Heat resistant silver coating for over 200 degrees C. No coating for stainless steel.	
Usable Gasket		Sheet gasket : Marketed products available Spiral wound gasket : Marketed products (with inner & outer ring) available only for ASME/JPI Class 150 and 300 For other flange standards, special gasket for TOMOE is required.	
Option		50mm : API607-5th edition Fire safe 80~600mm : API607-4th edition Fire safe ※5	

※1 Please contact us for the requirement of 125mm.

※2 Please contact us for the detail of applicable flange connection including lugged type.

※3 Special specification with aluminium bronze is also available. When materials other than standard are selected, the working pressure might be limited. Please consult us for the details.

※4 In case of Body material is WCB : Shaft /SUS420J2, Retainer/S35C In case of Body materials is CF8M : Shaft/630SS+H1150, Retainer/316SS

※5 300Lb-150mm/wafer body with flange standard JIS16K/20K is not applicable to fire-safe duties.

※There is possibility of seat leakage when fluid (powder/liquid) is solidified by working temperature and other cause, especially the valve is in a vertical position(e.g. at the bottom area of discharge spout of hopper and tank). Please consult us.

※ Determine the appropriateness of using other pipes according to the minimum internal pipe diameter indicated in the following table.

334A Minimum Internal Diameters of Piping

Nominal size		Minimum internal diameters of piping	
mm	inch	150Lb	300Lb
50	2	45	45
80	3	73	73
100	4	93	93
150	6	138	138
200	8	186	185
250	10	226	225
300	12	268	267
350	14	310	306
400	16	354	347
450	18	402	394
500	20	444	438
600	24	535	533

※ The gap between the disc edge and the pipe is smallest at the stem side flange face when all nominal sizes are fully open.
 ※ Because the above gap is calculated with the pipe considered as extending up to the flange end, the value will differ depending on the way the pipe and flange are welded.

334A Piping Gasket

- * In case of sheet gasket Any standard can be used.
- * In case of spiral gasket
 - For API, JPI, ANSI flange Any standard gaskets with inner/outer ring can be used.
 - For JIS flange Use special spiral gasket shown below.

●334A Special Spiral Gasket Flange Size

※ Using 334A gasket for size 300, 350mm.
 Using TOMOE 300 series for other.

Remark : In case a minute leakage of gas (less than 100PPm) becomes a problem, please inquire of our business charge.

600	24	—	—	40-M27×125(22×14)	40	40-M33×150(27×18)	40

Note: Bolt/Nut material: SNB7/S45C

Please use a nut with a height that is 100% of the screw diameter.

The bolt length calculation is based on use of a 4.5 mm thick spiral gasket.

The flange thickness calculation is based on the standard steel flange thickness.

※ Mark: The flange thickness calculation is based on the welding neck flange thickness.

Quantities shown are for one valve.

Examples

Setting bolts: 8 - M16 × 75 (13 × 8)

Long bolts: 4 - M16 × 145

Note: Bolt/Nut material: SNB7/S45C

Please use a nut with a height that is 100% of the screw diameter.

The bolt length calculation is based on use of a 4.5 mm thick spiral gasket.

The flange thickness calculation is based on the standard steel flange thickness.

Quantities shown are for one valve.

250 mm bolt quantities are indicated as follows: The quantity outside the brackets applies when the setting bolt holes are tapped and the values inside the brackets apply when the setting bolt holes are drilled.

Examples

Setting bolts: 8 - M16 × 75 (13 × 8)
 | | | |
 N M L b L1

Long bolts: 4 - M16 × 145

FS Fire safe certification to API607 7th Ed. / ISO10497 3rd Ed.

Features and Benefits

Double Offset PTFE Seated High Performance Butterfly Valve to Suit API Standard Fire Safe Certification

General description

Designed to suit those severe conditions such as high temperature, high pressure or high velocity which disallow the use of soft resilient seated butterfly valves. Ideal for use for seawater fire fighting.

Double offset geometry

The design exhibits tight shut off, reduced torques, chemical resistance, excellent throttling capabilities, and the ability to operate with relatively high pressure drops.

Seawater service application

Designed to suit seawater service application such as fire fighting line for FPSO.

Characteristics

Fire safe certification to API607 7th Ed.

API607-7th edition Fire safe / ISO10497 3rd Ed.

344Q Fire Safe Seat

Standard Specifications

Product characteristics		Double offset soft seated butterfly valve
Connection		Lugged type
Nominal valve size		80, 100, 150, 200, 250, 300, 350, 400, 450, 500, 600mm
Applicable standards	Face-to-face dimensions	API609 Class150 Category B
	Flange standards	ASME/JPI Class150, Flat Face
	Actuator attachment	ISO5211/1
	P-T rating	ASME B16.34 / API 609
Applicable fluid		Seawater
Max.working pressure		2.0MPa
Working temperature range		-29 degree C to 232 degree C
Pressure direction		Standard pressure direction : Pressure on retainer side
Test Pressure	Shell test	Working pressure x 1.5 times (Hydrostatic pressure)
	Seat leakage	0.7MPa(Air pressure) Based on API598-9th Ed. Option : Working pressure x 1.1 times (Hydrostatic pressure)
Standard Materials	Body	ASTM B148 C95800
	Disc	ASTM B148 C95800
	Shaft	MONEL K-500
	Seat ring	RPTFE(Carbon graphite contained) / Inconel 625
	Retainer	ASTM B148 C95800
	Gland Packing	Graphite
Shaft shape for actuator connection		150Lb: 80mm to 250mm : Square / 300mm to 600mm : Key
Actuator		Lock lever, Worm gear, Pneumatic cylinder, Electric motor
Coating		No coating.
Usable Gasket		Sheet gasket : Marketed products available Spiral wound gasket : Marketed products (with inner & outer ring) available
Fire safe		API607-7th edition, ISO10497 3rd edition

※ It is possible that seat leakage occur when fluid (e.g. powder and/or liquid) is solidified by working temperature and other cause. Consult us.

Double offset metal seat high performance butterfly valves to suit API standards 150 Lb Rating

Tom Disco

302A Wafer

303Q Lugged

Features and Benefits

Fire safe design

Designed as an inherently fire safe metal seated butterfly valve. Certified to Fire Safe Test as per API 607 4th Edition.

Bi-directional flow

Seals flow in both directions. The valves can be used even if the flow changes direction. (There are pressure limitations for each direction of flow. See chart for recommended specifications).

Disc with reinforced rib

Discs up to 300mm have a thin cross section but feature a reinforcing rib. As for 350mm to 600mm, the disc rib has a convex figuration. These designs successfully reduce thermal expansion and provide a constant sealing performance against any change in temperature or pressure of the fluid.

Double offset geometry

The axis of disc rotation is double offset to the seat ring. When the disc rotates, it unseats at a small turning angle by its cam effect. This prevents seat wear and provides reliable sealing performance over long periods.

Metal Seat

The resilient metal seat ring with coil spring compensates for thermal expansion or contraction of the body or disc. The ball lock method is adopted to facilitate replacement of the seat ring.

Improved reliability

By minimising the effect of friction and the special hard facing of the seating, the reliability of this metal seat butterfly valve is dramatically improved. The key connection of the disc and stem will prevent the direct effect of heat transaction from the stem to the disc as well as provide an anti-blow-out facility on the stem.

General description

Inherent fire safe design with carbon steel or stainless steel body with ASME/ANSI B16.34 Class 150 rating and API 609 pressure temperature rating. Ideal for use in general hydrocarbon, chemical process, low pressure steam and gas applications.

Double-Eccentric Disc

The axis of disc rotation is double eccentric to the seat rings. When the disc rotates, it unseats at a small turning angle by its cam effect. This prevents seat wear and provides a perfect seal for long periods.

Fire Safe Seat Design

Standard Specifications

*1. Please use 302Y or 337Y if using a nominal valve diameter of 50mm and 65mm.

*2. Refer to pressure - temperature rating chart on page 302A/303Q-05.

*3. Contact us at 400 degrees C and or over for oxidizing atmosphere.

*4. Contact us regarding 350~600mm flowing to stem side.

*It is possible that seat leakage occur when fluid (e.g. powder and/or liquid) is solidified by working temperature and other cause. Consult us.
Please note that use with vertical line such as bottom area of discharge spout of hopper, and tank.

Allowable leakage rate for closure test (API 598-7th Edition 1996)

Nominal size	Duration	Fluid	Allowable rate
80mm~150mm	1min	air	24bubbles / min or less (approx. 1.5cc / min)
200mm~300mm	2min		40bubbles / min or less (approx. 2.5cc / min)
350mm~600mm	2min		56bubbles / min or less (approx. 3.5cc / min)

Remark 1: ○=Applicable ×=Not applicable

Remark 2: The clearance between the disc and the pipe is based on API 609 and MSS SP-67.

80mm to 150mm: 1.5mm; 200mm to 500mm: 3.0mm, and 600mm: 6.4mm

Remark 3: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where there is an "X" in the chart above or you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

302A Piping gasket

- In case of sheet gasket Any standard can be used.
- In case of spiral gasket
 - For API, JPI, ANSI flange Any standard gaskets with inner/outer ring can be used.
 - For JIS flange Use special spiral gasket shown below.

※1 Flange tapping is applicable, Please consult us for the further information.

Remark: Use SNB 7/S45C (A193 B7/A, 194 2H) SUS304/SUS304

For long bolt, use full thread bolt.

For hexagon nut, use heavy nut.

A metric screw should have 3 pitches if its nominal diameter exceeds M30.

A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.

Hexagon bolts (set bolts) are indicated with the retainer side on the up side and the stem side on down side.

Features and Benefits

Unique stopper structure

For the 80 to 300mm models, automatic aligning and disc overrun prevention are ensured by the special spherical design of the inner surface of the body disc hub edge. As for the 350 to 600mm models, a spacer ring is provided between the mating surfaces of the disc hub edge and inner surface of the body for disc alignment.

Disc overrun is prevented by a protrusion on the inner surface of the body.

Double eccentric geometry

The axis of disc rotation is double offset to the seat ring. When the disc rotates, it unseats at a small turning angle by its cam effect. The design exhibits tight shut-off, reduced torques, chemical resistance, excellent throttling capabilities and the ability to operate with relatively high pressure drops. It also prevents seat abrasion and provides reliable sealing performance over long periods.

Bi-directional flow

Seals flow in both directions. The valves can be used even if the flow changes direction. (There are pressure limitations for each direction of flow. See chart for recommended specifications).

Easy replacement of the seat ring

The ball lock method is used to simplify replacement of the seat ring.

General Description

Designed to suit those severe conditions such as high temperature, high pressure or high velocity, which disallow the use of soft resilient seated butterfly valves. Ideal for use in chemical processes and applications with low pressure steam and high temperature gas.

	Motorized				
Coating		Silicon resin coating (grey N7) for less than 200 degrees C. Heat resistant silver coating for 200 degrees C and over. No painting for stainless steel.			

*1 Please consult us if the pressure exceeds 1.6MPa.

*2 Please refer to the pressure rating chart and stem material chart in the following pages.

*It is possible that seat leakage occur when fluid (e.g. powder and/or liquid) is solidified by working temperature and other cause. Consult us.
Please note that use with vertical line such as bottom area of discharge spout of hopper, and tank.

No.	Description	Q'ty	Remarks
1	Body	1	
2	Disc	1	
3	Stem	1	
★ 5	Seat ring	1	
7	Seat ring retainer	1	
8	Top shaft bearing	1	
9	Bottom shaft bearing	1	
10	Bottom cover	1	
★ 11	Bottom gasket	1	
12	Taper pin	2	
13-1	Packing retainer	1	
13-3	Ring	2	
★ 14	Gland packing	1 set	
15	Gland bush	1	
16	Gland flange	1	
17	Gland bolt	2	
18	Gland nut	2	
19	Gland coil	1	Only 80mm to 150mm
★ 20	Ball	2	80mm to 125mm
		4	150mm to 300mm
★ 21	Set screw	2	80mm to 125mm
		4	150mm to 300mm
22	Hexagon bolt, Spring washer	4 sets	
23	Stem key	1	Only 250mm, 300mm
29	C-ring	1	

■304A Parts List (350mm to 600mm)

No.	Description	Q'ty	Remarks
1	Body	1	
2	Disc	1	
3	Stem	1	
★ 5	Seat ring	1	
7	Seat ring retainer	1	
8	Shaft bearing	3	
10	Bottom cover	1	
★ 11	Bottom gasket	1	
12	Taper pin	1	
13-1	Packing retainer	1	
13-3	Ring	1	
★ 14	Gland packing	1 set	
15	Gland bush	1	
16	Gland flange	1	
17	Gland bolt	2	
18	Gland nut	2	
★ 20	Ball	4	
★ 21	Set screw	4	
22	Hexagon bolt, Spring washer	4 sets	
23	Stem key	1	
29	C-ring	1	
31	Eye bolt	2	Only 450mm to 600mm

Remark: The ★ indicates recommended spare parts. They are supplied as "Seat ring set" with a small hexagonal spanner to remove set screws (Part #21 Set screw).

Remark 1: ○=Applicable ×=Not applicable

Remark 2: The clearance of disc and pipe is based on API 609 and MSS SP67 80mm to 150mm: 1.5mm, 200mm to 500mm: 3.0mm, 600mm: 6.4mm

Remark 3: In case of "X" shown above, internal pipe diameter or flange is smaller than minimum internal diameter. Consider to put a spacer between a valve and a flange. Consult us.

304A Piping gasket

- In case of sheet gasket Any standard can be used.
- In case of spiral gasket
For API, JPI, ANSI flange Any standard gaskets with inner/outer ring can be used.
For JIS flange Use special spiral gasket shown below.

Special spiral gasket for JIS flange size

※ 1 Tapped drilling is also applicable.

Remark: Use SNB 7/S45C (A193 B7/A, 194 2H) SUS304/SUS304

For long bolt, use full thread bolt.

For hexagon nut, use heavy nut.

A metric screw should have 3 pitches if its nominal diameter exceeds M30.

A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.

Hexagon bolts (set bolts) are indicated with the retainer side on the up side and the stem side on down side.

Examples

Long bolts: 12 - M22 × 185
N M L

Setting bolts: 4 - M30 × 95 × 65
(Hexagon bolts) N M L S

304YA Wafer

Features and Benefits

Weight saving

30% weight saving with suitable design of 1.0MPa
(compared with existing 304Y 300mm)

Self aligning disc design

Contact area of the body and the disc is spherical.
These spherical centers are displaced. When valve position
is fully close, these surfaces are attached. When valve
position is fully open, there is a clearance between the body
and the disc. It can get both of smooth rotation and seal
performance.

Applicable for hot/cold water supply

Low temperature range expansion

Change from -20 degrees C to -29 degrees C

Easy replacement of the seat ring

The ball lock method is used to simplify replacement of the
seat ring.

Standard Specifications

Valve Model		304YA		
Valve type		Double eccentric (Water)		
Valve nominal size		40, 50, 65, 80, 100, 125, 150, 200, 250, 300mm 1 1/2, 2, 2 1/2, 3, 4, 5, 6, 8, 10, 12inch		
Max. allowable working pressure		1.0MPa		
Allowable seat leakage		ISO 5208 leakage A (Tight shut off)		
Flow direction		Bi -directional Standard direction of pressurization : Retainer side Maximum pressure on shaft side (200mm to 300mm) : 0.6MPa		
Applicable standards	Face to face dimensions	JIS B 2002 (Series46) / ISO 5752 (Series20)		
	Applicable flange connection	JIS 5K / 10K / ANSI 150Lb		
	Top flange	In compliance with ISO 5211		
Standard Materials*1	Body	FCD450	SCS13A	
	Disc	SCS13A		
	Shaft	SUS420J2	SUS630 (H1150)	
	Seatring	RPTFE (Carbon and graphite contained)		
	Seatring retainer	SF490A**2 or S25C or S45C	SCS13A**2 or SUS304	
	Shaft bearing	PTFE+ SS400	PTFE+ SUS316L	
	Bottom gasket	#8121 or T#1215-A Expanded graphite (Low temperature: -29℃～200℃ V#7020)		
	Gland packing	RPTFE (Graphite contained)		
Maximum Temperature Range		FCD450 body: -20℃ or over ～ less than 200℃	SCS13A body: -29℃ or over ～ less than 200℃	
Test pressure	Body Shell	working pressure×1.5 (Hydraulic pressure)		
	Seat leak	working pressure×1.1 (Pneumatic pressure)		
Actuators		Lock lever	1T	40 to 150mm (1 1/2 to 6inch)
		Worm gear	2U	40 to 300mm (1 1/2 to 12inch)
		Pneumatic cylinder	7E	40 to 300mm (1 1/2 to 12inch)
			7F, 7G	40 to 200mm (1 1/2 to 8inch)
			3U, 3K	250, 300mm (10, 12inch)
		Motorized	4I	40 to 300mm (1 1/2 to 12inch)
			4J	40 to 300mm (1 1/2 to 12inch)
Fluid types		Air Gas, Hot air, Water, Chemical solution, Steam		
Surface traetment	Disc	Hard chrome plating		

※1. The parts that use properly by body material and specification, please refer to the Following table.

※2. In case of 40mm

Case of SCS body : Material is SCS13A only. (Common parts is 304Y)

Case of FCD body : Material is SF490A only. (Common parts is 304Y)

※ There is possibility of seat leakage when fluid (powder/liquid) is solidified by working temperature and other cause, especially the valve is in a vertical position(e.g. at the bottom area of discharge spout of hopper and tank). Please consult us.

Specification	Body's Material	Temperature range	Parts material				
			Shaft	Seatriring	Bottom gasket	Grand packing

304YA Piping gasket

- In case of sheet gasket Any standard can be used excluding 65mm-JIS flange. For 65mm-JIS flange, use the sheet gasket that followed old JIS Standard: JIS B 2404_1999 for inner diameter. For other size, JIS standard products can be used.
- In case of spiral gasket Use special spiral gasket shown below.

■ Special spiral gasket

Nominal size		JIS FLANGE JIS 10K				ANSI FLANGE ANSI 150Lb

Remark: Long bolt uses full threaded bolt.

Hexagon nut uses heavy nut.

Example

Long bolts: 8 - M16 × 145 × 16
 N M L H

302Y Wafer

304Y Wafer

Features and Benefits

Ideal shut-off with new stopper mechanism. Two types of seat – metal and PTFE – for optimum performance in your application.

Unique stopper structure

For the 40 to 300mm models, automatic aligning and disc overrun prevention are ensured by the special spherical design of the inner surface of the body disc hub edge. Disc overrun is prevented by a protrusion on the inner surface of the body.

Double eccentric structure

The disc is rotated easily by minimal torque and unseats after turning only a small angle. Moreover, seat abrasion is prevented for a long life of reliable sealing.

Thin disc with a rigid construction

The disc is thin but ribbed for extra rigidity. The disc reduces thermal expansion and provides consistent sealing even in changing temperature or pressure situations.

Seal the flow from both directions

Seals flow in both directions. Valve can be used as is, even if the flow changes direction. (There are pressure limitations for each direction of flow. See Pressure-temperature leakage chart for recommended specifications.)

Easy replacement of the seat ring

The ball lock method is used to simplify replacement of the seat ring.

302Y
Resilient metal seat ring with original coil spring

304Y
PTFE seat ring is inert to most chemical products and solvents

General Description

The 300 series is optimal for applications that cannot be handled by valves with rubber seats because of the temperature, pressure, fluid velocity or fluid itself. Two types are available: the 302Y with a metal seat for steam line applications and the 304Y with a PTFE seat for chemical line applications.

Body shell test		Max. 3.0MPa	
Seat leak test		Max. 2.2MPa	
Flow direction		Bi -directional (Standard direction of pressurization: Retainer side) On the valve disc side: 2.0MPa On the valve stem side: 1.0MPa The max. pressure on the valve disc side for 250mm and 300mm valves is 1.6MPa	Bi -directional (Standard direction of pressurization: Retainer side) On the valve disc side: 2.0MPa
Seat leakage		ISO 5208 leakage rate C	ISO 5208 leakage rate A (tight shut-off)
Working temperature range		-20 to 250 degrees C	-20 to 200 degrees C
Standard materials	Body ※2	FCD450 (Tuffride treated) OR SCS13A	
	Disc	SCS13A (HdCr plating)	
	Stem	SUS420J2 or SUS3291J1	
	Seat ring	SUS316	RPTFE (with carbon graphite) or the optional specification PFA + PTFE (white)
	Gland packing	PTFE with carbon graphite	
Bonnet type		Open bonnet	
Actuators	Lock lever	40 to 150mm	
	Worm gear	40 to 300mm	
	Pneumatic cylinder	40 to 300mm	
	Motorised	40 to 300mm	
Coating		Under 200 degrees C: Modified silicon resin coating (Munsell N7). 200 degrees C and over: Heat resistant painting (silver). No painting for stainless steel.	

※1. 65mm is not applicable for BS 10 Table E.

※2. For size 40mm, only SCS13A is available for the body material.

※There is possibility of seat leakage when fluid (powder/liquid) is solidified by working temperature and other cause, especially the valve is in a vertical position(e.g. at the bottom area of discharge spout of hopper and tank). Please consult us.

300	12	○	○	○	○	○	○	○	×	○	×	○	○	○	○	297.6

Remark 1: ○=Applicable ×=Not applicable

Remark 2: The clearance between the disc and the pipe is based on API 609 and MSS SP-67.
40mm to 150mm: 1.5mm; 200mm to 300mm: 3.0mm

Remark 3: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.
In cases where there is an "X" in the chart above or you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange.
For details, please consult us.

302Y/304Y Piping gasket

- In case of sheet gasket Any standard can be used excluding 65mm-JIS flange. For 65mm-JIS flange, use the sheet gasket that followed old JIS Standard: JIS B 2404_1999 for inner diameter. For other size, JIS standard products can be used.
- In case of spiral gasket Use special spiral gasket shown below.

■ Special spiral gasket for JIS flange size

HLV304M

**Custom-made
design
available!**

Characteristics

Suitable for high-temperature, medium-to low- pressure service, such as in hot air, exhaust gas, steam, chemical fluids, and solvents.

Compact Design

Short pattern face to face dimensions. The body and disc design contributed to a valve that is lower in weight and more compact than other valves of this type.

Double Offset Geometry

The axis of disc rotation is double offset to the seat. When the disc rotates, it unseats at a small turning angle by its cam effect. This prevents seat wear and provides reliable sealing performance over a long period.

Simple Sealing Design/Reliable Performance

The simple sealing design with a minimal number of parts allows easy maintenance without special tools. Tight shut off with an RPTFE seat is available. See PT rating chart.

Custom-Made Design

Custom made designs, including the use of special materials, a double flanged body or special face to face dimensions are available upon request. A metal seat type is also available.

304M PT Rating (RTFE SEAT)

※No actuator extension bonnet is required.

304M Cv Value

Standard Specifications

Valve model		304M
Valve size		650, 700, 750, 800, 850, 900, 1000mm
Face to face dimensions		Manufacturer's standard
Applicable flange standard		JIS 5K, 10K, ASME B16.47 Class 150 Series A or B, DIN/BS PN10
Standard materials	Body	Carbon steel casting (SCPH2/WCB) with Mn3 (PO4) 2 treatment, Stainless steel casting (SCS13A/CF8, SCS14A/CF8M)
	Disc	Stainless steel casting (SCS13A/CF8 with Cr.plating, SCS14A/CF8M with Cr. plating)
	Stem	Stainless steel type 431, 630, 316
	Seat	RPTFE
	Gland packing	Carbon graphite
Max.working pressure*		0.7MPa (0.2MPa on non-preferred direction)
Working temperature range*		−30 to 230 degrees C
Seat leakage		Working pressure x 1.1 times (Max 0.8Mpa)
Flow direction		Flow to shaft side.
Marking		API609/MSS-SP25/JIS B 2004
Piping flange gasket		Serrated spiral 45 to 55 groove/inch for gasket face finish. unless otherwise specified

*Recommended piping position: shaft horizontal position

*Max. working pressure & temperature range are subject to change depending on customized specifications.

※It is possible that seat leakage occur when fluid (e.g. powder and/or liquid) is solidified by working temperature and other cause. Consult us.
Please note that use with vertical line such as bottom area of discharge spout of hopper, and tank.

507V

Features and Benefits

For various applications such as air conditioning systems, pulp and paper mills, steel mills, chemical plants, food processing and many other process industries, the 507V rotary control valve will support your fluid control requirements.

Flexible control over a wide range

The 507V allows complete control over the full range from the open to the closed position. The valve can also handle high temperatures of up to 400 degrees C such as in steam lines and it will respond quickly and flexibly to any changes within the operating parameters of the process line. The 507V therefore is the optimum valve for any control system processing multiple products where the operating conditions change from time to time in accordance with process requirements.

Cost-effective rotary control valve

In spite of its compact size and light weight, the 507V has a large valve capacity that minimises the energy loss of fluid at the fully open position.

This compact design reduces the required size of the actuator, installation space and piping supports. It also minimises vibration of control systems and increases the operating life.

These features provide the benefit of reducing the total operating cost of your plant.

Model 507V is the high temperature version of our rotary control valve designed for exclusive use in the regulation of fluids.

General Description

The high performance characteristics of this model originate from its unique design with a teeth and gull-wing shaped disc that touches the seat at a certain angle (Fig.1). The teeth are arranged on the circumference of the disc towards either direction of flow. The 'touch-at-an-angle' disc assists the reduction of seating and unseating torque and facilitates smooth control of the valve.

Other benefits include high rangeability, low noise level and anticavitation.

This model covers a wide temperature range in the fluid control of air conditioning systems, pulp and paper mills, chemical plants, steel mills and food processing applications.

General

With guide-vane-like teeth around the disc edge, and the disc touching the seat at a certain angle, this product is a compact, lightweight and highly cost-effective, high-performance rotary control valve that exhibits outstanding control characteristics. The valve provides steady control over a wide range with higher rangeability, better cavitation resistance, lower dynamic torque, lower noise level, and a better leakage rate than any other rotary control valve.

Two models, the 507V and 508V, are available for a range of severe applications. The 507V is the optimum type for fluid control of high pressure, high temperature systems. The 508V is characterized by its rubber seat ring, and eliminates the need for any additional stop valve because of its complete sealing capability.

Fundamental Structure

This product has two basic design features that are responsible for the outstanding performance. One is the teeth around the disc and the other is the gull-wing-like design of the disc.

The teeth on the circumference of the disc break up the fluid energy acting on it with a resultant reduction of pressure recovery. Unlike conventional flat discs, the gull-wing-like disc of the product touches the seat at a certain angle for reduced seating/unseating torque. This results in steady control of the valve.

Recent trend toward rotary type control valves

Standard Specifications

Valve nominal size	50 to 400mm	
Pressure rating	50 to 200mm: ANSI Class 300lb 250 to 400mm: ANSI Class 150lb	
Actuator mounting	Non-flange joint	
Flange accommodation	JIS: 10K/16K/20K, ANSI Class 150lb, ANSI Class 300lb, DIN PN 10/16/25 Please contact us when 250mm/16K and over.	
Test pressure	Body shell	Working pressure X 1.5 (Max 1.5MPa)
	Seat leak	Measure clearance between body and disc at fully closed position
Service temperature ※1	Cast steel	-10 to 400 degrees C. Following materials are used for 200 degrees C or higher – carbon for bearings, exfoliated graphite
	Stainless steel	-50 to 400 degrees C. Following materials are used for 200 degrees C or higher – carbon for bearings, exfoliated graphite
Rangeability	100:1	
Valve opening	Max. 70°	
Flow characteristics	Equal percent	
Leakage rate ※2	FCI 70-2 Class II	
Stuffing box	Studs and nuts tightening	
Standard materials	Body	Cast steel SCPH2(A216 WCB) Stainless steel SCS14(A351 CF8M)
	Disc ※3	Stainless steel SCS14(A351 CF8M)
	Stem	Stainless steel SUS630(SUS316) ※4
	Bearings	Reinforced PTFE, Carbon graphite(200 degrees C and over)
	Packings	Exfoliated graphite Exfoliated graphite

※1 Please consult us if the application is in the range of 400 to 600 degrees C.

※2 The disc is gull wing shaped and touches the metal seat at an angle. This design minimises leakage to a level less than 0.5% of the rated Cv which is equal to or lower than the leakage permitted on a double-seat globe control valve.

※3 The disc is electroless plated with nickel.

※4 Please consult us if an SUS316 stem is required.

508V

Features and Benefits

Except for the rubber seat ring, the 508V has the same design principle as the 507V. Excellent controllability is achieved by having the innovative teething disc seating at a certain angle. The 508V has a reinforced core rubber seat ring allowing it to be used for high pressure service up to 1.6MPa with complete tight shut-off.

Rubber seat ring with a "control cosine curve" profile

Taking into consideration the cosine curve profile rubber seat ring incorporated into our models 700G and 773Z, we developed a new type of seat ring for exclusive use in the 508V. The 508V has a reinforced core rubber seat ring incorporated with a "control cosine curve" profile for sizes between 50mm and 200mm. This seat ring design ensures a tight shut-off up to a working pressure of 1.6MPa. The 508V available in sizes between 250mm and 350mm has a similar seat ring design and profile, but the seat ring is backed up by a precisely formed metal core which is encapsulated inside the rubber. This design enables the control valve to function under severe conditions of high velocity, a large differential pressure or a high vacuum. (The maximum allowable shut-off pressure is 1.0MPa).

No additional stop valve, less installation space and less cost

Because of its reliable sealing effect against a high differential pressure, the 508V does not require an additional stop valve. You save on installation space and benefit from the excellent cost effective features of our rotary control valve.

Satisfies both JIS and ISO standards for extended applications

The 508V is available in different flange specifications. Also, its face-to-face dimension meets both JIS and ISO requirements. Therefore this model is applicable for various industrial applications worldwide.

General

With guide-vane-like teeth around the disc edge, and the disc touching the seat at a certain angle, this product is a compact, lightweight and highly cost-effective, high-performance rotary control valve that exhibits outstanding control characteristics. The valve provides steady control over a wide range with higher rangeability, better cavitation resistance, lower dynamic torque, lower noise level, and a better leakage rate than any other rotary control valve.

Two models, the 507V and 508V, are available for a range of severe applications. The 507V is the optimum type for fluid control of high pressure, high temperature systems. The 508V is characterized by its rubber seat ring, and eliminates the need for any additional stop valve because of its complete sealing capability.

Fundamental Structure

This product has two basic design features that are responsible for the outstanding performance. One is the teeth around the disc and the other is the gull-wing-like design of the disc.

The teeth on the circumference of the disc break up the fluid energy acting on it with a resultant reduction of pressure recovery. Unlike conventional flat discs, the gull-wing-like disc of the product touches the seat at a certain angle for reduced seating/unseating torque. This results in steady control of the valve.

Recent trend toward rotary type control valves

General Description

With a specially designed rubber seat ring, Model 508V ensures tight shut-off and eliminates the need for any additional stop valve required by conventional control valves. The high performance characteristics of this model originate from its unique design with a teeth and gull-wing shaped disc that touches the seat at a certain angle (Fig.1). The teeth are arranged on the circumference of the disc towards either direction of flow. The 'touch-at-an-angle' disc assists the reduction of seating and unseating torque and facilitates smooth control of the valve. Other benefits include high rangeability, low noise level and anti-cavitation. The face-to-face dimension meets both JIS and ISO standards so the 508V is applicable for various industrial fields including air conditioning systems.

Multiple merits for multiple applications

Controllability

High rangeability

*The wide range of controllability permits flexible adjustment to any changes in the process conditions of production lines. This merit is especially beneficial to multifold productions.

*The conventional "split range control" with twin valves is no longer required. One product is enough to cover the whole range.

With its nearly "equal percent" flow characteristics and its very low leakage rate, the product offers an extremely high rangeability of 100:1.

Low dynamic torque

*The steady performance ensures more precise control.
*The compact actuator saves space and energy.

The above graph shows a comparison of the product with other typical valves. The patented disc has remarkably reduces the dynamic torque.

Reliability

Excellent cavitation resistance

*The outstanding cavitation resistance increases the operational life of the valve and pipeline, and improves the reliability of the system.

*This model is works in more severe requirements than ever.

A high coefficient of initial cavitation (Kc), and a high pressure recovery coefficient (FL), inhibit the occurrence of cavitation.

Cv value

Size		Opening angle

		CvFp	210	548	1015	1598	2280	3145	5090

Remarks:
CvFp : Pipe size=1.5×Valve size
EX:

Environmental considerations

Low noise level

- *Provides better work environment.
- *Especially in air and gas applications, this product has a lower noise level by 5 to 10dBA and meets and exceeds noise regulations

The teeth on the disc cut the flow into fine jet streams.
This is the most effective device for lowering the noise level when the valve is half open.

Cost merit

Larger valve capacity

- *Reduces loss of energy at the fully open position.
- *Allows one to two sizes of valve reduction in comparison with a conventional valve.

Compact and lightweight design

- *Permits compact piping arrangement.
- *Allows the use of a portable remote controller unit.
- *Eliminates vibration problems of the piping system, and improves operational life.

Simple design

- *Permits easy control of spare parts.
- *Facilitates easy maintenance.
- *Has a reduced number of parts and improved reliability.

Pressure recovery factor (FL), coefficient of incipient cavitation (Kc)

Remark1: ○=Applicable ×=Not applicable

Remark2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

508V Maximum velocity

Fresh water	Short period	10m/s
	Continuous	7m/s
Sea water	Short period	10m/s
	Continuous	5m/s
Air (ambient temp.)	Short period	80m/s
	Continuous	30m/s

The maximum velocity shown is estimated as an average in the fully open state.

Remark: "Short period" means a few minutes creating high velocity until the disc angle reaches the designated position.

Remark 1: ○=Applicable ×=Not applicable

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

Remark: Bolt and nut material: SS400/SS400 and SUS 304/SUS304.

Long bolt uses full threaded bolt.

Use thin hexagon nut. (Use heavy hexagon nut for ANSI150Lb.)

A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.

Example

Long bolts: 12 - M22 × 185

N M L

Setting bolts: 4 - M30 × 95

(Hexagon bolts) N M L

DTM

General Description

The Ultimate Rotary Control DTM provides high accurate control under most critical process conditions including higher pressure drop liquid/gas applications. DTM series valves can be supplied with or without integrated cavitation breaker in order to reduce noise level by max. 30 dB. Valves in this series also exhibit higher anti-cavitation capability.

Conventional Butterfly Valve

Local static pressure drop and quick pressure recovery causes cavitation

DTM Series

Cavitation breaker

(Note) Colors show the pressure distribution. Red means a high pressure and blue means a low pressure.

Features and Benefits

The ultimate rotary control DTM valve provides accurate control and low noise levels, even at high velocities.

Wide rangeability, 100:1

Improves flow control with a wide range of control from closed to fully open.

Noise reduction by 20dB or more

Features the latest anti-cavitation technology pioneered by TOMOE that delivers superior control and low turbulence in the line. As a result, there is a 20dB reduction in flow induced valve noise and associated damage to piping and equipment compared to conventional valves.

Can handle high differential pressure

Capable of handling extremely high differential pressure with control in the opening range of 0 – 30% and differential pressures greater than 2MPa.

High performance seat structure

Excellent durability and high performance characteristics achieved with metal seat design. Seat leakage of Class V and Rate A for a soft seal.

Ease of maintenance

Designed for easy maintenance – for example, seat and cavitation breaker can be replaced simply and quickly.

High performance diaphragm actuator

A new high performance diaphragm pneumatic actuator that is compact, highly accurate and has proven long life in the field has been designed to manage the DTM valve actuation process with optimum efficiency.

Optional RPTFE seat

The DTM is also available with an RPTFE seat which provides zero leakage to ISO 5208 Rate A.

Standard Specifications

Valve type		Rotary control butterfly valve (with low noise characteristics)	
Valve nominal size		80, 100, 125, 150, 200, 250, 300mm	
Pressure rating		ASME B 16.5 Class 150, 300mm	
Applicable flange standard		JIS10, 16, 20, 30K, ASME B 16.5 CLASS 150, 300	
Body Style		Double flanged	
Face-to-face dimensions		IEC 60534-3-2 (JIS B 2005-3-2)	
Flow characteristics		Equal percent	
Rangeability		100:1	
Flow direction		Flow to retainer side	
Max. working pressure / Closed		Class 150 : 2MPa / Class 300 : 5.1MPa	
Max. differential pressure / Open by 30%		Class 150 : 0.8MPa / Class 300 : 2MPa	
Seat leakage		ANSI B 16.104 Class V (9ANSI/FCI 70-2)	ISO 5208 Rate A (Zero leakage)
Temperature range		-29 to 400 degrees C	-10 to 230 degrees C
Standard materials	Body	WCB or CF8M	
	Disc	CF8M	
	Stem	Stainless steel	
	Seat ring	Stainless steel	RPTFE
	Cavitation breaker	Stainless steel	
Applicable gaskets		Any standard gasket with inner/outer ring can be used	
Actuator		Diaphragm actuator, pneumatic cylinder, motorised	

※ It is possible that seat leakage occur when fluid (e.g. powder and/or liquid) is solidified by working temperature and other cause. Consult us.
Please note that use with vertical line such as bottom area of discharge spout of hopper, and tank.

Features and Benefits

New design features of the TOMOE 847 series result in vastly improved sealing performance in applications where conditions are potentially hazardous.

High tension coil spring

(250, 300mm: coned disc spring)
Ensures a stable seal at both the upper and lower gland even at extreme temperatures or when thermal shock occurs.

Minimum 3mm PFA thickness

(250, 300mm: PTFE)
Seamfree PFA injection moulding (PTFE compression moulding) on the seat and disc to a minimum thickness of 3mm prevents permeation of dangerous fluids or gases.

No special gasket needed

Stable flange sealing performance is ensured by concentric circular grooves on the flange faces thereby eliminating the need for a special gasket when operating under specified temperatures.
The wider sealing area also ensures minimum "creep" at high temperatures.
Flange sealing mechanism is independent of the seating and gland seals which ensures there is no loss of line fluid.
Soft gaskets can be used when fitting the valve in the pipeline.

Total sealing

Valve structure includes primary, secondary and independent tertiary seal, ie. gland packing. There is also a fourth seal of O-rings on the top/bottom stems, ie. dust seal.

Lining

(50~200mm: PFA, 250~300mm: PTFE)
Seamless construction of the valve lining of the 847 Series ensures complete stability in all conditions.
Design and construction of conventional valves often means permeation of fluids or gases, particularly at high temperatures. By employing an injection moulding method and utilising the properties of PFA, PTFE at a minimum thickness of 3mm, the 847 Series is able to eliminate faults common to PTFE-lined valves of conventional design.

Pressure-Temperature Leakage Chart

General Description

Chemically resistant butterfly valves. The unique construction of the TOMOE 847 Series provides superior strength and sealing properties essential in applications where conditions are potentially hazardous.

Sealing Properties

The upper and lower stem housings of the 847 Series valve have the same length high tension coil springs which provide stable sealing performance in cases of temperature change. Conventional valves usually employ a shorter spring in the lower stem housing. This can lead to a loading imbalance on the seat making it difficult to maintain consistent sealing performance.

The sealing design features a triple acting sealing mechanism controlled by the balanced spring forces. (250, 300mm: Coned disc springs).

In addition, stem seal leakage caused by excessive pipe flange damping forces is eliminated because the stem seal arrangement and the pipe flange seal are totally independent.

Standard Specifications

Type	846T	847T
Valve nominal size	65 to 300mm (8 sizes)	50 to 300mm (9 sizes)
Applicable flange standard	JIS 5K/10K, ANSI 125 lb/150 lb, ISO 7005-1 PN 6/10/16, BS10 Table E, DIN 2632 PN 6/10/16, BS 4504 PN 6/10/16	
Face-to-face dimensions	JIS B 2002 46 series/ ISO 5752 wafer butterfly valves (short)	
Max. working pressure ※1	1.0 MPa	
Body shell test	1.5 MPa	
Seat leak test	1.1 MPa	
Working temperature range	PPS disc: -20 to 120 degrees C Stainless disc: -20 to 200 degrees C	-20 to 200 degrees C
Working temperature in continuous use ※1	PPS disc: 0 to 80 degrees C Stainless disc: 0 to 150 degrees C	0 to 150 degrees C
Standard materials	Body	Ductile iron, FCD-S (A395)
	Disc	SCS14, PPS (65 to 200mm) 50 to 200mm: SCS13(CF8) with PFA lining 250, 300mm: SCS 13 (CF8) with PTFE lining
	Stem	SUS329J1 420J2SS
	Seat ring	65 to 200mm: PFA / 250, 300mm: PTFE (Backup rubber: Fluorocarbon rubber) 50 to 200mm: PFA/250, 300mm: PTFE (Backup rubber: Fluorocarbon rubber)
Coating	Up to 200mm : Epoxy resin coating (Munsell N7) 250 and 300mm : Polyester powder baking finish (Munsell N7)	

※1 "Working temperature in continuous use" stands for the temperature continuously kept exceeding one hour.

※2 Export license by Japanese Ministry is required 847T for all sizes and 846T up to 100mm. Please consult us the detail.

Selection criteria	Standard	Select when none of the following heavy duty items apply.
	Heavy duty	Select when any of the following items apply. ① Working temperature is over 60 degrees C ② Powder or high viscosity fluids (consult us) ③ Velocity more than 3 m/s ④ Throttling ⑤ Slow travelling time of valve: more than 30 sec. ⑥ Dead end, pump outlet, emergency open

Remark 1: ○=Applicable

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

CE CE Marking (842T)

Features and Benefits

Bubble tight seal and no leakage

PTFE does not react to most of the chemicals used in modern chemical processing – even at high temperatures and high pressures. It is recognised as an ideal material for industrial valves that handle highly corrosive fluids. PTFE has a low friction coefficient and excellent lubricity when used in contact with metal surfaces.

TOMOE's 841T and 842T butterfly valves take full advantage of the superior qualities of PTFE: it protects all wetted parts and guides all stems. The 841T and 842T valves have a proven record of excellent performance and long life in heavy duty applications requiring tight shut-off, low torque and smooth operation.

Triple seal prevents leakage

The special feature of TOMOE butterfly valves is the seat ring design. The interference between the disc and the raised central area of the seat ring shuts off the flow completely. The resilient elastomer seat cushion ensures reliable shut off for the life of the valve.

TOMOE butterfly valves are bi-directional and withstand pressures to 0.7 MPa from either direction.

The upper and lower positions of the seat ring, where the stem passes through, use a triple seal design to prevent leakage to the atmosphere as shown in the illustration.

General Description

Chemically resistant butterfly valves with a proven record of excellent performance and long life in heavy duty applications.

Where you can see advantages over other types of valves

1. In corrosion resistant pipelines requiring mechanical strength as well as heat resistance.
Chemical Industry: Chlorine gas, acentric acid, sulfuric acid, hydrochloric acid, and other highly corrosive fluids.
2. In non-toxic environments where the fluid must not contact any metallic or organic materials.
Food Industry: Cooking oil, seasoning, syrup, and other food products.
3. In reduced pressure or high temperature pipelines where conventional valves cannot be used because of piping space requirements and valve weight.
General Industry: Steam lines, hot air, special process gases, dyes, and so on.
4. In processes involving hazardous fluids that require clean pipelines free from machining burrs, scales, and grease.
Piping: Pipelines for oxygen and other highly oxidizing agents.
5. In processes requiring sanitation or vacuum service.
vacuum service.
Handling: Processing food, transporting powder or granular solids.
6. In low temperature processes where low heat gain is an advantage.
Cooling: Cooling air, chilled water, and brine.

Standard Specifications

Type	841T	842T
Body shape (centring method)	Concentric design, wafer type	
Valve nominal size	350, 400, 450, 500, 600mm	350, 400, 450, 500, 600mm
Applicable flange standard	JIS 10K, ANSI 125 lb/150 lb, DIN PN10, BS 4504 PN10, BS 10Table E	
Face-to-face dimensions	Manufacturer standard	
Max. working pressure	0.7 MPa	
Seat leakage	Tight shut-off	
Flow direction	Bi-directional	
Pressure test	Body shell	1.05 MPa (Hydraulic)
	Seat leakage	0.7 MPa (Hydraulic)
Working temperature range	- 10 to 100 degrees C	
Working temperature in continuous use ※1	0 to 90 degrees C	
Standard materials	Body	FCD-S
	Disc	SCS14
	Stem	SUS316
	Seat ring	PTFE (back-up rubber: CR)
Top flange	Manufacturer standard	
Applicable gaskets	Rubber gasket cannot be used. Moulded gaskets require special dimensions (refer to dimension chart).	
	Off-the-shelf seat gaskets can be used for 350 to 400mm.	
Coating	450 to 600mm require special inner diameter dimensions (refer to dimension chart).	
	350mm and larger: Lacquer primer (Munsell N7)	

※1 "Working temperature in continuous use" stands for the temperature continuously kept exceeding one hour.

※2 Export license by Japanese Ministry is required 842T for all sizes. Please consult us the detail.

600	24	—	○	○	—	—

Remark 1: ○=Applicable

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

Remarks:

1. Use thin hexagon nuts. For ANSI 125Lb and 150Lb, use heavy hexagon nuts.

2. If the nominal diameter of the unified screw exceeds 1 inch, make the threading 8 threads per inch.

3. The table above does not apply if the material used is a special material which is not SS400.

Example

Long bolts: 12 - M22 × 185 × 46
 N M L S

Long bolts and nuts (full thread)

Setting bolts (Hexagon bolts)

Setting bolts: 4 - M30 × 95 × 65
 (Hexagon bolts) N M L S

JIS

JIS B 2032 Compliant
(This product conforms to General Specifications for Machinery and Equipment of the Ministry of Land, Infrastructure, Transport and Tourism.)

Evolution of Long Sellers Sealing performance and Durability Improved!

- Gears and lever have been integrated with valve body to achieve both functionality and downsizing.
- Resin-aluminum hybrid gearbox improves the strength and durability of valves with anti-condensation performance added.
- High anti-condensation performance of the Z series has been inherited. (Gear valves)
- New lightweight valve disc with optimized seal shape improves the sealing performance and operability of valves.
- Modified rubber seat structure stabilizes the sealing performance of valve seat.
- Strong bearings have been adopted to significantly improve the durability of valve opening/closing. (Automatic valves)
- Special valve body has been developed for automatic valves to improve their strength and durability.

***Note : These valves are different in face-to-face dimensions from the first 700Z (Coating color: Light blue; Munsell 10BG-6/4) developed in 1980 and discontinued in August 2003.**

Standard Specifications

Body type(Connection)		Concentric rubber seated butterfly valve, flangeless(wafer) type
Valve nominal size		40, 50, 65, 80, 100, 125, 150, 200, 250, 300mm
Flange accommodation		JIS5K/10K, ASME125/150Lb, DIN PN10, BS4504 PN10, GB/T 9113.1 1MPa
Face-to-face dimensions		JIS B 2002 ¹⁹⁸⁷ Series 46(ISO 5752 table5/BS5155/API609)
Max. working pressure		1.0 MPa
Allowable seat leakage rate		JIS B 2003 ²⁰¹³ Rate A(Tight shut-off)
Flow direction		Bi-directional
Test	Body shell test	1.5 MPa(Hydraulic pressure)
Pressure	Seat leak test	1.1 MPa(Pneumatic pressure)
Working temperature range		EPDM: -20 ~ 120°C (Option:NBR: -10 ~ 80°C)
Working temperature in continuous use ^{*1}		EPDM: 0 ~ 70°C (Option:NBR: 0 ~ 60°C)
Standard materials	Body	Aluminum die cast alloy ADC12
	Disc ^{*2}	SCS13(A351 CF8), SCS14(A351 CF8M), PPS(40~200mm)
	Stem ^{*2}	SUS420J2(AISI420)
	Seat ring	EPDM ^{*3,4} (Option:NBR)
Top flange		Lever/Gear type: Valve integrated type, Cylinder/ Electric motor type: In accordance with ISO 5211
Actuator ^{*5}		Manual, pneumatic, electric
Pipe flow velocity(limit value)		Up to 3 m/s (Valve fully-open, continuous operation, ambient temp. and fresh water)
Coating		Urethane coating (Munsell 2.5BG 6/12)
Condensation property		No condensation in the upper part of gears at ambient temperature 30°C and humidity 80% with cold water at 5°C ^{*6}

※1 'Working temperature in continuous use' stands for the temperature continuously kept exceeding on hour.

※2 Materials shown in (): equivalent materials in ASTM/AISI standard.

※3 If the fluid contains even a slight amount of oil, never use an EPDM rubber seat ring. If the fluid contains chlorine, the seat ring may deteriorate early due to combined factors including density and temperature. For details consult our sales office.

※4 In the pipe lines where chemicals containing calcium are supplied, it is recommended to use an EPDM rubber seat ring to protect pipes.

※5 The actuator of the product cannot be replaced.

※6 These values are based on data obtained in a laboratory and may vary if the temperature and humidity distributions in the field are not uniform. Even in an environment having these values, condensation can occur if ambient or water temperature changes suddenly.

Remark 1: The symbols above mean the following.

○: Piping possible —: Not standardized

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

700G Wafer

704G Full lugged

705G Semi lugged

Features and Benefits

Rib disc

The 316 stainless steel (JIS SCS14) rib disc comes standard from 50mm to 300mm. Thin profile disc reinforced by ribs (patent pending) provides larger Cv compared to our conventional design. It also reduces weight while maintaining mechanical strength. A flat face disc is also available on request.

Patented cosine curve seat ring

The cosine curve seat ring reduces valve operating torque substantially and allows the torque to be adjusted according to the working pressure.

Much longer life with spherical design

Similar to a spherical body rotating inside a spherical area, the operation of the disc is smooth and unhindered. Torque is reduced and the valve life is lengthened by 300%.

Self-aligning stem seal through backup ring

The stem seal is the primary and secondary seal system. The backup ring functions as the self-aligning stem seal.

Long bonnet

The long neck shape allows insulation of up to 50mm after the valve is installed. 701G: Nylon coated body is also available (50 to 300mm).

Please contact us for more information.

Two aligning methods (350 to 600mm)

Two valve models are available: the casted hole type (700G) and the tapped and drilled hole type (705G). They accommodate all the applicable flange standards.

Discs and seats come in various materials to meet a wide range of needs. These are the ultimate general purpose valves and they provide excellent cost performance.

General Description

Handling, durability and longevity are the basic aspects by which valve performance can be improved. TOMOE have now developed the 700G series, a superior, pressure-proof, general purpose valve, with the addition of a wide range of features to offer improved performance and better cost efficiency.

The 700G series is designed to satisfy many international flange standards for use worldwide.

Structure

The body is available in various designs such as wafer, semi-lugged and full-lugged, with various materials such as ductile iron, carbon steel, etc. The disc is also available with high-grade stainless steel, type 316, nylon coating, aluminium, bronze or PPS. The patented cosine-curve structure is adopted for the seat ring. The 700G series is superior to conventional models in all respects.

Coating ※8		Epoxy primer finish (Munsell N7)						

※1 16bar finish is also available subject to working conditions.

※2 Working temperature range varies depending on combination of disc materials and seating. Please consult us.

※3 Please consult us when using NBR and EPDM seating continuously above 60 degrees C and 70 degrees C respectively.

※4 "Working temperature in continuous use" stands for the temperature continuously kept exceeding one hour.

※5 Cast steel body or stainless steel body is also available.

※6 Rib disc: standard. Flat face disc: optional.

※7 Heat resistant EPDM (to 150 degrees C), FKM, SEP, CR and white-NBR seats are also available. See below table.

※8 Polyester powder backed finish (V-Pet #4000) for 700G size 40 to 300mm. Epoxy resin coating for 705G size 50 to 300mm.

※9 Export license by Japanese Ministry is required up to 100mm with FKM seating. Please consult us the detail.

* Never use an EPDM rubber seat ring if the valve is being used for oil or for a fluid containing even a slight amount of oil.

Note 1: For nominal size 40, 50 mm type (for control), the 4I-0 type should be selected. (The 4I-00 type is only designed for ON-OFF operation.)

Remark: For 400mm type with the accessories below, type 4I-4 should be selected.

- Micom unit
- Servo unit
- Speed control unit
- Potentiometer

Remark 1: The symbols above mean the following.

○: Piping possible —: Not standardized

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange. For details, please consult us.

Remarks:

- Please use a hexagon nut with 80% threading. (For ANSI, use heavy nut.)
- A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.

* Nominal size "600 mm" requires hexagon bolt for setting.

Example

Long bolts: 12 - M22 × 185 × 45
 Quantity Nominal size (M) Length of bolt (L) Effective screw length (S)

Setting bolts: 4 - M30 × 95 × 65
 (Hexagon bolts) Quantity Nominal size (M) Length of bolt (L) Effective screw length (S)

Long bolts and nuts

Setting bolts (Hexagon bolts)

704G Piping Bolts and Nuts Sizes

* Dimensions on the table show when the piping flange hole are tapped. For drilled holes, please consult us.

Remarks:

1. The bolt lengths are in accordance with thickness of steel flanges.
2. A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.
3. The list is exclusively for standard material "SS400".

Example

Long bolts: 12 - M22 × 185 × 45

Remarks:

Bolt/Nut material: SS400/SS400, SUS304/SUS304

The dimensions in parenthesis show ANSI125Lb. (for 65 mm and 80 mm)

Heavy nut shall be used for ANSI125Lb/150Lb hexagon nuts.

A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.

Example

Long bolts: 12 - M22 × 185 × 45
 Quantity Nominal size (M) Length of bolt (L) Effective screw length (S)

Setting bolts: 4 - M30 × 95 × 65
 (Hexagon bolts) Quantity Nominal size (M) Length of bolt (L) Effective screw length (S)

Setting bolts (Hexagon bolts)

Features and Benefits

New cosine-curve seat

The new cosine-curve seat (patent pending) allows better performance in reducing friction, torque and wear than the previous design.

Much longer life with spherical design

Similar to a spherical body rotating inside a spherical area, the operation of the disc is smooth and unhindered. Torque is reduced and the valve life is lengthened.

Self-aligning stem seal through backup ring

The stem seal is the primary and secondary seal system. The backup ring functions as the self-aligning stem seal.

Ease of maintenance

The field replaceable seat ring makes maintenance easy and reduces maintenance costs.

Standard Specifications

Model	72WG (Wafer)	72SG (Semi lugged)	72LG (Lugged)
Valve nominal size	40 to 200mm	50 to 600mm	50 to 600mm
Applicable flange standard	DIN PN16, GB PN16, ANSI 150Lb, BS4504 PN16	DIN PN16, GB PN16, ANSI 150Lb, BS4504 PN16	DIN PN16, GB PN16, ANSI 150Lb, BS4504 PN16
Face-to-face dimensions	JIS B 2002 / ISO 5752 / API 609		
Max. working pressure	1.6Mpa		
Body shell test (hydraulic)	2.4Mpa		
Seat leak test (pneumatic)	1.76Mpa		
Working temperature range ※1	NBR : -10 to 80 degrees C, *EPDM : -20 to 120 degrees C		
Working temperature in continuous use ※2	NBR : 0 to 60 degrees C, *EPDM : 0 to 70 degrees C		
Standard materials	Body	Ductile iron, JIS FCD450	
	Disc	304 stainless steel, JIS SCS13 316 stainless steel, JIS SCS14	
	Stem	SUS420J2	
	Seat ring	NBR, *EPDM	
Actuators	Lock lever	Manual, pneumatic, electric	
Coating ※8		Powder coat paint (Munsell N7)	

※1 Please consult us when using NBR and EPDM seating continuously above 60 degrees C and 70 degrees C respectively.

※2 "Working temperature in continuous use" stands for the temperature continuously kept exceeding one hour.

* Never use an EPDM rubber seat ring if the valve is being used for oil or for a fluid containing even a slight amount of oil.

Remark 1: The symbols above mean the following.

○: Piping possible —: Not standardized

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.

In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange.

For details, please consult us.

Remarks:

Bolt/Nut material: SS400/SS400, SUS304/SUS304

The dimensions in parenthesis show ANSI125Lb. (for 65 mm and 80 mm)

Heavy nut shall be used for ANSI125Lb/150Lb hexagon nuts.

A unified screw should have 8 threads per inch if its nominal diameter exceeds 1 inch.

**Vulcanized Rubber Lining on The Body for Use
in High Pressure, High Velocity and Industrial
Vacuum Applications**

731P Wafer

732P Wafer

732Q Lugged

Lock Lever

Worm Gear

Pneumatic
Cylinder

Motorized

Features and Benefits

Vulcanized rubber lining on the body

The seat is vulcanized to the body which ensures correct rubber compression and greater strength of the rubber seat. This design is much more effective in high velocity and industrial vacuum applications than soft resilient seated valves.

New cosine-curve seat

The new cosine-curve seat (patent pending) allows better performance in reducing friction, torque and wear than the previous design.

Cubical shape by lowering height

The height of the raised part of the seat in the narrow area is lower. It provides strength and sealing performance by preventing the movement of the raised portion of the seat in high pressure applications.

Tapered finish

To make the flow characteristic at small valve opening as close to linear as possible, the edge of the seat is tapered. This makes for a smoother flow and better performance in high velocity working conditions. The taper is narrow around the stem area and wide around the wing of the disc area to provide strength and sealing performance for the rubber seat.

New streamlined shape around stem hole

Although the spherical disc provides good sealing performance and extended life for our rubber lined valves, it still produces relatively high forces around the stem hole area where a large contact surface exists. In order to produce greater pressure at this point of contact with less friction, we incorporate a labyrinth effect where six small raised lines are moulded around the stem hole.

Features a concentric design with tight 100% bi-directional shut-off, low torque and a maximum working pressure of 1.6MPa to 2.0MPa.

Tapered Finish

Fig. 2

New streamline shape around stem hole

Ideal, Cost Effective Valve for Use in High Velocity,
High Pressure and Industrial Vacuum Applications

731P Wafer

732P Wafer

732Q Lugged

752W Lugged

Features and Benefits

Perfect sealing against high pressure to 2.0MPa

By employing a cosine-curve design seat ring, the disc contacts simultaneously around the entire seat during closure which enables perfect sealing against pressures up to 1.96MPa. Perfect sealing is assured in high differential pressure, high velocity and vacuum applications. The operation torque for the valve is substantially reduced. Also, since the body is covered with the seat ring, it is never exposed to fluid.

No restrictions in direction of flow even for high differential pressures

With a concentric design and low operating torque, 731P/732P can perfectly seal pressures up to 2.0MPa or 1.6MPa for both directions.

Face-to-face dimensions satisfy ISO standards

The face-to-face dimensions satisfy BS 5155 and ISO 5752. It is also adaptable to many international flange standards.

Long neck

The long neck enables insulation of up to 50mm after installation of the valve.

O-ring case with self-aligning stem seal function

The stainless steel O-ring case (utility model) counteracts any stem displacement and shaft tilt caused during the operation of the valve under fluid pressure. Because this O-ring is never exposed to the fluid, it never erodes.

The rubber seat is reinforced with a metallic core

Since this reinforced seat ring is clamped in position by the flanges, it is much more effective in high velocity and industrial vacuum applications than a soft resilient seat without a metallic core. Moreover, the seat ring can easily be replaced (350 to 600mm types). The vulcanized seat to the body is used in sizes 50 to 80mm.

Stainless steel disc as a standard material

Stainless steel disc provides excellent corrosion resistance in various applications.

General Description

With applications for high pressure service valves increasing, TOMOE have developed a new 20K type in addition to the traditional 16K type. The 20K type is designed to seal high pressures up to 2.0MPa, while the 16K type can seal up to 1.6MPa. This concentric butterfly valve incorporates a cosine-curve design seat ring reinforced with a metallic core and provides excellent cost advantages.

Remark 1: ○=Applicable

Remark 2: Butterfly valves are inserted into a pipe that was fitted with the disc when fully open.
In cases where you are using a pipe or flange that is less than the minimum inner pipe diameter, use is still possible if means are taken such as inserting a spacer between the valve and flange.
For details, please consult us.

Valve nominal size

350 to 600mm

Max. working pressure MPa

Working temperature range °C

Features and Benefits

Adaptable for Building Services for Super High-rise Buildings and High-pressure Lines for Utilities Facilities.

Concentric Butterfly Valve for High Pressure Service with Excellent Cost Performance.

- New lineup of models from 350 mm to 600 mm (1.6 Mpa)
- In compliance with JIS and ISO face-to-face dimensions
- Globally-patented cosine curve seat ring
- Significantly improved durability thanks to spherical disc
- Self-aligning stem seal through backup ring

Light and compact

Weight reduced by 34% compared to the previous product*¹

*¹ In comparison with the previous 350 mm bore-size product Model 731P

Condensation protection measures *Optional

No condensation in the gear at ambient temperature 34°C and humidity 75% with cold water at 5°C.

*For 600A, the shape is different.

Standard Specifications

Valve model	731R	
Body type (centering method)	Concentric design, wafer type	
Valve nominal size	350mm to 600mm	
Face-to-face dimensions	JIS B 2032 46 series / ISO5752 wafer butterfly valve (short)	
Applicable flange standard	JIS 16K, ANSI 150Lb	
Max. working pressure ^{*3}	1.6 MPa	
Allowable valve seat leakage standard	Tight shut-off	
Pressure application direction (flow direction)	Bi-direction	
Test pressure	Body shell test	JIS 16K, ANSI 150Lb: 2.4 Mpa
	Seat leakage	JIS 16K, ANSI 150Lb: 1.76 Mpa Hydraulic
Working temperature range	EPDM: -20 to 120°C (Please consult us when using the product in the temperature range -20°C to 0°C.)	
Working temperature in continuous use ^{*2}	EPDM: 0 - 70°C	
Allowable average pipe flow velocity (limit value)	3 m/s or less (At full valve open, continuous operation)	
Standard materials	Body	FCD450
	Disc	SCS13
	Stem	SUS420J2
	Seat ring ^{*1}	EPDM
Top flange	In compliance with ISO5211/1	
Condensation prevention structure	Optional (Condensation prevention resin column)	
Piping gasket	Not necessary	
Coating	Epoxy primer (Munsell N7)	
Actuator	Worm gear type (Automatic valves are not supported.)	

Note) If the following specifications are required, please consult our sales office.

(1) High durability required because the number of opening/closing times exceeds 100,000.

(2) Continuous operation required with a valve opening angle of 30 degrees or less.

(3) Control operation which requires 3% or lower hysteresis accuracy of the valve itself.

*1 If the fluid contains chlorine, the seat ring may deteriorate early due to combined factors including concentration and temperature. For details consult our sales office.

*2 "Working temperature in continuous use" is the temperature range when the valve is operated continuously over one hour. If the valve is operated continuously at a temperature above 70°C and there is no problem, we advise that the valve can be used in that environment.

*3 Negative pressure range is not allowable.

Standard Specifications

Material Name	EPDM	
Temperature range	Allowable (°C)	-20~120
	Continuous (°C)	0~70
Max. working pressure(Mpa)	1.6	
Color	Black	
Features	Corrosion resistance	○
	Heat resistance	○
	Grease resistance	×
	Abrasion resistance	△

Key to symbols ○..... Good - Fit for use
△..... Acceptable for use
×..... Not fit for use

Note 1) If the fluid contains oil, never use EPDM.

Note 2) ○, △ and × in the above features show typical characteristics.
The characteristics depend on fluid and temperature conditions.
Please consult us.

Features and Benefits

Simple structure and low cost. Many years of proven reliable performance in various industries.

Concentric design raised center seat

Figure 1 shows the TOMOE sealing design between the disc and seat. The raised section of the seat reduces and minimises the operating torque while ensuring a tight seal between disc and seat.

Rounded dove-tail design

Figure 2 shows the self-gripping seat ring design firmly in place inside the body. This design ensures the seat cannot be displaced during the bolting up of the adjoining flange. The seat also acts as the gasket between the valve and the pipe flange.

Triple-sealing system

Figure 3 shows the triple stem seal. The primary seal is created from the initial compression between the flat surface of the seat and the flat hub of the disc. When the valve is subject to normal operating conditions this seals the shaft and body from any contact with the flowing medium. The secondary seal is accomplished by an O-ring fitted into a stainless steel cartridge which is moulded into the seat ring. There is a secondary seal at each end of the stem where it penetrates the seat. The third seal is to prevent dirt and other foreign materials within the environment from getting into any of the working valve parts.

Figure 1

Figure 2

Figure 3

Discs and seats come in various materials to meet a wide range of needs. These are the ultimate general purpose valves and they provide excellent cost performance.

General Description

TOMOE butterfly valves are used worldwide for various applications in water treatment, shipbuilding, air conditioning, petrochemical, power generation and other industries. Among the various types of TOMOE rubber seated butterfly valves, there are three types – 700E, 700K and 700S – that are particularly suitable for large diameter applications.

Standard Specifications

Type	700E		700K	700S
Size	650mm to 1350mm			
Max. Working Pressure MPa	1.0MPa			
Body shell test	1.5MPa			
Seat leak test	1.1MPa			
Flange standard ※1	JIS 5K/10K	ASME B16.1 Class 125 ISO PN 10 ASME B 16.47 Series A Class 150lb	ASME B16.47 Series B Class 150lb API 605 Class 150	
Working temperature range	NBR : -10 to 80 degrees C, *EPDM : -20 to 120 degrees C			
Working temperature in continuous use ※3	NBR : 0 to 60 degrees C, *EPDM : 0 to 70 degrees C			
Standard materials	Body	Cast iron	Cast iron, Ductile iron, Carbon steel	Cast iron, Ductile iron, Carbon steel
	Disc	Stainless steel Ductile iron with hard Cr plated stainless steel casting Aluminium bronze		
	Stem	Stainless steel, K-MONEL		
	Seat ring ※2	NBR, *EPDM		
Coating	Lacquer Primer (Munsell N7)			

※1 Other flange standards may be available on request. Consult us.

※2 The seat ring of 1000mm and over for 700E/S/K and 720F are vulcanized to the body.

※3 'Working temperature in continuous use' stands for the temperature continuously kept exceeding one hour.

※ Clean face disc (2 shaft design) is available for 700E/S/K and 720F.

※ Please refer to 700G, 704G, 705G in case of 600mm or below.

* Never use an EPDM rubber seat ring if the valve is being used for oil or for a fluid containing even a slight amount of oil.

704G Lugged

722F Double flanged

720F Double flanged

Today's ships have to work hard. With the extensive use of automated systems, minimum manning levels, extended journeys and quick turn round times, maintenance time is at a premium. Equipment must be ultra reliable and also meet the latest standards.

Features and Benefits

Long life and leak tight

The 704G/722F/720F are designed to meet all of these requirements. They are tough valves made to international standards with worldwide marine approvals. Long term leak tightness was achieved through attention to detail in the spindle sealing and seat design.

Low cost maintenance

The seat and disc can easily be replaced under a planned maintenance schedule. This ease of replacement does not affect the valve's function as the seat is positively located in machined grooves in the valve body.

Certification/Approval

Satisfies requirements of the major certification/approval bodies such as:

Lloyd's Register of Shipping (LR)

American Bureau of Shipping (ABS)

Nippon Kaiji Kyokai (NK)

Bureau Veritas (BV)

Korean Register of Shipping (KR)

Standard Specifications

Type		704G	722F	720F
		Lugged type	Flanged type	
Valve nominal size		50mm to 100mm ※1	125mm to 800mm	850mm to 1350mm
Applicable flange standard ※2		JIS 10K, (JIS 5K, ANSI 125/150, BS 4504 PN10)		
Max. working pressure		1.0MPa		
Body shell test		1.5MPa		
Seat leak test		1.1MPa		
Working temperature range		NBR : -10 to 80 degrees C, *EPDM : -20 to 120 degrees C		
Working temperature in continuous use ※3		NBR : 0 to 60 degrees C, *EPDM : 0 to 70 degrees C		
Standard materials ※4	Body	Cast steel, SCPH2		
	Disc	SCS 14 (316SS)	SCS 13 (304SS)	
	Stem	SUS 420J2	SUS 403	
	Seat ring ※5	NBR, *EPDM		
Coating		Lacquer primer (Munsell N7)		

※1 Available up to 600mm.

※2 Not all flange standards is applicable to all sizes. See "Applicable flange standard" on p.414 for detail.

※3 'Working temperature in continuous use' stands for the temperature continuously kept exceeding one hour.

※4 Other materials, such as ductile iron body, aluminium bronze disc, etc, are also available. Consult us.

※5 Seating on 1000mm types and above are vulcanized to the body.

* Never use an EPDM rubber seat ring if the valve is being used for oil or for a fluid containing even a slight amount of oil.

■722F Parts list (350mm to 600mm)

No.	Description	Q'ty	Remarks
1	Body	1	
2	Disc	1	
3	Stem	1	
4	Bushing	1	
5	Bushing	1	
6	Bottom cover	1	
★ 8-1	Taper bolt	2	
★ 8-2	O-ring	4	
★ 9-1	Hexagon nut	2	
★ 9-2	Spring washer	2	
10-1	Hexagon bolt	4	
10-2	Spring washer	4	
★ 12	Seat ring	1	
★ 13	O-ring	1	
14	Gasket	1	
★ 15	O-ring	2	See Remark 2.
16	Ball	1	
17	Hollow bolt	1	
18	Lock nut	1	
g41	Key	1	

Remark 1: The ★ indicates recommended spare parts. They are supplied as "Seat ring set".

Remark 2: The O-ring material (item number 15) should be the same as the sea tring (item number 12).

Remarks:

1. The bolt for valve positioning uses the screw hole.
2. The hexagon bolt is used in the screw hole part for valve positioning.
3. Please use a hexagon nut with 80% threading.
4. For uses other than marine, use SS400 as the bolt (and nut) material.

Example

Hexagon bolts: 4 - M30 × 95 × 65

Hexagon bolts

227P

Features and Benefits

A unique structure and low cost with proven reliability in water works, power generation, desalination plants and other industrial applications.

Unique seat ring

Unique seat ring structure provides low torque and long life. Grooves are molded on the sealing surface of the seat to reduce operating torque. An original retaining method is adopted. Plastic resin is injected from behind the seat ring to stiffen it. The resin-reinforced seat ring keeps constant compression through the entire disc to assure tight shut off.

Arch-shaped disc

A light weight and highly rigid arch-shaped disc allows fluid to pass through it when a valve opens. The valve opening area (Cv value) increases by approximately 15% compared to conventional designs. The pressure drop is also minimized.

Easy seat repair

Generally, the seat ring can be used for over 10 years without replacement. If any leakage is found, it can be easily repaired using an injection kit to inject resin into the seat ring surface at the point of leakage. The seat can also be replaced by a new seat with the injection kit.

Custom-Mode Design

Custom mode desing, including the use of special materials, special face to face dimentions are aviable upon request.

Standard Specifications

Valve nominal size	650mm to 2400mm	
Applicable flange standard	JIS 5K/10K, DIN PN10/PN16, JPI 150Lb, ANSI 125Lb/150Lb, AWWA	
Max. Working pressure	1.6MPa	
Pressure test	Body shell	2.4MPa (Hydraulic, Max.)
	Seat leak	1.8MPa (Hydraulic, Max.)
Working temperature range	-10 to 80 degrees C (NBR)	
Working temperature in continuous use ※1	0 to 60 degrees C (NBR)	
Standard materials	Body	FCD450, SCPH2
	Disc	SCS13, CAC702
	Stem	SUS304, SUS630, Monel K-500
	Seat ring	NBR, *EPDM
Special specification	Rubber lined body interior	
Coating	Primer (Munsell N7)	

※ Consult us with specifications if dimensions for actuator are required.

※ Actuators such as manual, pneumatic, electric and hydraulic ones can be selected upon adapt of detailed specifications.

※ 1. "Working temperature in continuous use" stands for the temperature continuously kept exceeding one hour.

*No EPDM seat can be used for fluid containing any oil.

2400	96	1610	1715	2877	610	2756

- Use the gasket size that complies with flange standard when installing.
- Body flange thickness may not comply with the standard. Consult with us.
- 227P has two versions, AWWA type and general purpose type.
- Maximum flow velocity range should be 6m/sec in full open position and 9m/sec during emergencies or for short durations without frequent opening and closing.

Technical data

75A, 75B —————

150A, 150B

Flow coefficient based on K'

Flow coefficient based on K'

$$\Delta H = \frac{V^2}{2g}$$

ΔH = Head loss (feet of water)

V = Flow velocity through piping (feet/sec.)

cf = Flow coefficient for piping, whose length is 10 times that of the pipe diameter, and that for valve

cf = Flow coefficient of valve only

g = 32.17 feet/sec².

Cv value:

$$Cv = 4294 \, cf \times D^2 \quad D: \text{Internal diameter of pipe (feet)}$$

Conventional Model

Prevention of chattering.

Check valve of a new generation that reduce piping space and allow direct attachment to a pump.

Features and Benefits

Prevents water hammer

The combination of a light, compact plates with a small moment of inertia and an optimized spring quickly stops the flow when the pump is turned off, preventing water hammer.

Direct installation to a reducer

Preventing chattering caused by fluid turbulence enables installing a check valve behind a reducer and a curved pipe. Straight pipe at upstream side is not necessary. Durability improved by decreasing vibration and noise.

Bearing
Raised resonance frequency by optimizing the clearance of bearing, in order to decrease sympathetic vibration of plates while operating

Wing shaped plates with rib
Lightweight plates reduce moment of inertia, improving performance of preventing water hammer. Wing shaped plates reduce eddy, reducing vibration of plate.

Centering
Centering of valve body and flange can be performed among all applicable flanges, simplifying piping work.

Rubber seat
Lip seal improved sealing performance of back pressure at low hydraulic head.

Shaft pins
Either side of shaft pin is fixed with nuts and plugs in order to prevent vibration. Washers absorb expanded /contracted shaft pins caused by pressure and temperature fluctuation, also mitigate loosen nuts and overstressed pins, improving durability (907L).

*1 These are common features of 907L, 907T and 908H in case of any specific model is not indicated.

*2 Drawing shows 907L. Structure of bypass differs from 907T and 908H.

Standard Specifications

			907L	907T	908H
Valve nominal size ※1			50mm to 300mm	50mm to 400mm ※1	50mm to 300mm ※1
Face-to-face dimensions			Manufacturer standard Refer to dimension “L”.	JV8-1, SAS358	
Applicable flange standard			JIS 5K, 10K	JIS 10K, 16K, 20K ASME Class125, Class150	
Max. working pressure ※2			1.0 MPa	2.0 MPa	
Seat leakage			Tight shut （ JIS B 2003:2013 Rate A ） Pressure more than “Required differential pressure” is needed.		
Required differential pressure ※3			0.04 MPa （ Hydraulic head 4 m ） or more		
Average velocity inside pipe			6 m/s	10 m/s	
Chattering prevention			YES Directly installable to a reducer and a curved pipe	YES Directly installable to a reducer, a curved pipe and a pump	
Working temperature range			EPDM : -20 ～100 ℃ NBR : -10 ～ 80 ℃	EPDM : -20 ～120 ℃ NBR : -10 ～ 80 ℃	
Working temperature in continuous use			EPDM : 0 ～ 70 ℃ NBR : 0 ～ 60 ℃	EPDM : 0 ～ 100 ℃ NBR : 0 ～ 60 ℃	
Standard materials	Body ※5		FC250 Cast iron	A536 Gr.65-45-12 Ductile iron	A351 CF8 Stainless steel
	Plate		SCS13 Stainless steel	A351 CF8 stainless steel	
	Seat ring ※6,7		EPDM (Option: NBR) Vulcanized to valve body		
	Shaft pins		304 stainless steel		
	Spring		304 stainless steel

	Seat leakage	High pressure	1.1 MPa (pneumatic)	2.2 MPa (hydraulic)	
		Low pressure	0.04 MPa (pneumatic)	0.04 MPa (pneumatic)	
Accessories ※1,8			Standard : Bypass valve (Except for 350 and 400mm) Option : High torque spring, low torque type (standard spring installed unless otherwise specified)		
Pipe gasket			Required Use two commercially available gaskets per valve, which is appropriate for flange standard and fluid condition.		
Fluid types ※7,8,9,10			Water	Water, air	
Coating			Urethane coating (Munsell 2.5BG 6/12-Green)		—

※1 907T 350mm and 400mm are made to order. (Bypass valve is not installed.)

A rubber sleeve is inserted to 907T/908T 250mm and upper size. Pressure loss increases compared to the one without a rubber sleeve.

※2 MKT Series cannot be used under negative pressure. Do not install it underwater or underground.

※3 In case of 907L, required differential pressure differs depending on installing condition and spring selection. Please refer to spring selection table.

※4 "Working temperature in continuous use" stands for the temperature continuously kept for over one hour, provided that a fluid is not frozen inside.

※5 Chemical treatment for rust prevention is applied to non-coated part of 907L/907T. This treatment may cause discoloration of surface to white or reddish brown. This does not affect product quality.

※6 EPDM seat ring is recommended in case of using a chemical containing calcium for maintenance. In case a fluid containing solid and adhesive material, 903L, 901C and 906C is recommended.

※7 EPDM seat ring can not be used for oil or a fluid containing oil. A fluid containing chlorine can accelerate damage to rubber seat ring, depending on density and temperature of a fluid. Please consult us for detail.

※8 As parts of bypass for 907L are made of copper alloy, a fluid which corrodes copper alloy such as acetylene, ammonia and sulfur can not be used. Copper alloy is not used for components of 907H/908H which a fluid contacts.

※9 A fluid containing alkali and acid can weaken bond of seat ring, please consult us for detail.

※10 MKT Series can not be used for a viscous fluid or a fluid containing powder. In case of gas, please check spring selection table for installing condition.

Select valve according to fluid and installing condition. Incorrect valve selection can cause vibration and abnormal noise.

Please refer to spring selection table and instruction manual before use.

MKT Selection Criteria
1.0MPa 907L

Flow Direction	Fluid	Condition	Min. differential pressure (MPa)	Size (mm)	Spring
Up flow 	Liquid (Clean water)	The valve should be installed directly after the following: - a reducer which is 3 sizes smaller than a valve - a curved pipe - a straight pipe	0.02	50~300	High torque
			0.04		Standard
	Gas	Forward direction, inlet pressure 0.1MPa or more	0.04		Low torque specification (no spring)
Horizontal layout 	Liquid (Clean water)	The valve should be installed directly after the following: - a reducer which is 2 sizes smaller than a valve - a curved pipe - a straight pipe	0.04	50~300	High torque
				0.06	50~200
Down flow ※1 					0.1

※ Equivalent or more pressure shown in the table is needed for sealing performance. When inlet pressure remains, differential pressure may not be maintained. Especially in case of down flow, inlet pressure easily remains.

※ Inlet pressure in a forward direction needs to be higher than cracking pressure and lower than max. working pressure.

※ Do not use under the condition other than above to avoid vibration, abnormal noise, damage, and leakage.

2.0MPa 907T/908H

Flow Direction	Fluid	Condition	Min. differential pressure (MPa)	Size (mm)	Spring
Up flow 	Liquid (Clean water)	The valve should be installed directly after the following: - a reducer which is 3 sizes smaller than a valve - a curved pipe - a straight pipe	See Table A	50~400	Low torque (with a rubber sleeve ^{※2})
		The valve should be installed directly after the following: - a reducer which is 2 sizes smaller than a valve - a curved pipe - a straight pipe	0.5~2.0		Standard
	Gas		Differential pressure 0.1~2.0 Mpa		
Horizontal layout 	Liquid (Clean water)	The valve should be installed directly after the following: - a reducer which is 2 sizes smaller than a valve - a curved pipe - a straight pipe	2.0~10	50~200	Standard
Down flow ^{※1} 				250~400	High torque
					0.1~5.0

Table A Allowed velocity range

Nominal size	Allowed velocity
50A	1.2~10 m/s
65A	
80A	
100A	
125A	1.6~10 m/s
150A	
200A	
250A	2.2~10 m/s
300A	

※1 In case of down flow, there is possibility of leakage depending on condition when checking.

※2 Pressure loss increases with a rubber sleeves compared to standard torque spring.

※ If possible, avoid installing directly after a reducer. Install before a reducer.

※ Do not use under the condition other than above to avoid vibration, abnormal noise, damage, and leakage.

350	—	0.95	2.6	3.1	3.5
400	—	0.95	2.3	2.5	3.2

- Cracking pressure (opening pressure) is minimum pressure that allows a fluid to flow stably in a forward direction. Flow would not be stable even a fluid flows under this pressure.
- Internal diameter of piping shall be equal to Pi or over. In case of lined pipe, take lining into accounts when you check internal diameter. JIS G3452 SGP, JIS G3454 Sch60 and under, JIS G3459 Sch40 and under and VP pipe are applicable. In addition, JIS G3454, JIS G3459 "Sch80" are also applicable in case of 907T/908H.
- Internal diameter of gaskets contact part needs to be smaller than maximum internal diameter (Fi). JIS B2220 SOP, SOH, WN, IT, SW and TS (resin pipe) are applicable.
- In case of loose flange, internal diameter of flat collar (except for the rounded part) needs to be smaller than maximum internal diameter (Fi). JIS B2309 and SAS 363:2018 are applicable.

Loose flange

※ Material: SS400 unichrome plating

※ Length of bolt is calculated based on thickness of JIS B 2220:2012 steel pipe flange (except for 10K thin type), size of JIS B1181:2014 style 1 hexagon nut and 3mm thickness of gaskets.

※ Do not use rusted, damaged or deformed bolt or nut. Lubricate screws enough.

※ Number of bolt shown above is needed for one piece of valve.

Setting bolts: 4 - M30 × 95 × 65
(Hexagon bolts)

N M L S

Setting bolts (Hexagon bolts)

MKT Gasket

Commercially available gaskets which are appropriate for flange standard and fluid condition can be used. Our recommendation is as follows:

- Size : JIS B 2404 (size of flange used)
- Type : Seat gaskets (Non-metal flat gasket)
- Shape : Ring gaskets
- Material : JIS R 3453 joint sheet / Reinforced rubber / RPTFE
- Thickness : 1.5 to 3mm (3mm is recommended.)
- Quantity : 2 pieces/valve

※ In case of resin flange, use gaskets which is recommended by flange manufacturer.

※ 907T/908H: Perform centering appropriately so that a gasket does not distract the bypass passage. 907L: The bypass passage runs inside of valve body; a gasket does not distract the bypass passage. Perform centering appropriately so that a gasket at outlet side does not distract plates. Gaskets tend to protrude inner side due to pressure; especially they are made of rubber. Internal diameter of gaskets shall be the same as seat gasket shown in JIS B 2404.

※ 65A suits both new and old JIS.

Features and Benefits

Lightweight and compact Check Valve protects piping lines from water hammer with its instant response

- Dual plates quickly shut when water flow stops, prevent water hammer and backflow.
- Improved durability by reducing chattering caused by water turbulence (903).
- Light weight, compact, user friendly and easy care
- Bypass valve standardly installed enables to simplify piping work and save space (903L, 905C).

Comparison between swing check valve and Bata-Check 903L

*1 These are common features of 903L, 901C, 905C and 906C unless otherwise specified.

*2 Above drawing is an example. Shape of each part differs depending on model and size.

Standard Specifications

Pipe gasket		Required		
Fluid types ^{※5,7,8,9}		Water, air		
Coating		Urethane coating (Munsell 2.5BG 6/12 Green)	Etching primer (Dark green)	Phthalic acid resin coating (Munsell 5PB 3/9 Dark blue)

※1 901C JIS5K is special specifications. Please consult us.

※2 Bata-check cannot be used under negative pressure. Do not install underwater or underground.

※3 Required differential pressure of 903L differs depending on installing condition and spring selection. Please refer to spring selection table.

※4 "Working temperature in continuous use" stands for the temperature continuously kept for over one hour. Provided that fluid is not frozen inside.

※5 As parts of plate and bypass are made of copper alloy, a fluid which corrodes copper alloy such as acetylene and ammonia can not be used.

※6 EPDM seat ring is recommended in case of using chemical containing calcium for maintenance.

※7 EPDM seat ring can not be used for oil or a fluid containing oil. A fluid containing chlorine can accelerate damage to rubber seat ring, depending on density and temperature of fluid. Please consult us for detail.

※8 A fluid containing alkali and acid can weaken bond of seat ring. Please consult us for detail.

※9 Bata-check can not be used for viscous fluid or a fluid containing powder. In case of gas, please refer to spring selection table for installing condition.

※10 Spring is not supplied with 903L low torque specification.

※11 Standard spring will be supplied unless otherwise specified.

Select valve according to fluid and installing condition. Incorrect valve selection can cause vibration and abnormal noise.
Please refer to spring selection table and manual before use.

Bata-Check Selection Criteria

903L

Flow Direction	Fluid	Condition	Min. differential pressure (MPa)	Size (mm)	Spring
Up flow 	Liquid	Installed directly after the same size, 2D or longer straight pipe	0.01	50~300	High torque
			0.02		Standard
	Gas	Forward direction, primary pressure 0.1MPa or more	0.04		Low torque specification (no spring)
Horizontal layout 	Liquid	Installed directly after the same size, 2D or longer straight pipe	0.02	50~300	High torque
			0.04	50~200	Standard
	Gas	Forward direction, primary pressure 0.15MPa or more	0.04	50~200	Standard
Down flow 	Liquid	Installed directly after the same size, 2D or longer straight pipe	0.06	50~150	High torque

※ Equivalent or more pressure shown in the table is needed for sealing performance. When inlet pressure remains, differential pressure may not be maintained. Especially in case of down flow, inlet pressure easily remains.

※ In case of liquid, inlet pressure of forward direction needs to be higher than cracking pressure and lower than max. working pressure.

901C

Flow Direction	Fluid	Condition	Min. differential pressure (MPa) Min Max	Size (mm)	Spring
Up flow 	Liquid	Installed directly after the same size, 2D or longer straight pipe	0.7 ~ 1.0	350~450	High torque
			0.1 ~ 0.7		Standard
			0.05 ~ 0.1		Low torque
	Gas		0.05 ~ 0.1		Low torque
Horizontal layout 	Liquid	Installed directly after the same size, 2D or longer straight pipe	0.7 ~ 1.0	350~450	High torque
			0.1 ~ 0.7		Standard
			0.05 ~ 0.1		Low torque
	Gas		0.05 ~ 0.1		Low torque
Down flow 	Liquid Gas	Installed directly after the same size, 2D or longer straight pipe	0 ~ 1.0	350~450	High torque

※ When inlet pressure remains, there is possibility of leakage. 0.02 MPa or more is needed to seal. Especially in case of down flow, inlet pressure easily remains.

※ When check valve is installed at the outlet of the pump, spring needs to be high torque spring regardless of pressure.

● 905C is supplied with standard spring only. It can not be used for dawn flow.

● 905C requires 3D or longer straight pipe upstream.

300	—	2.0	1.3	1.8	3.2

901C Cracking pressure

Flow direction	Horizontal	Vertical (Upwards direction)	
Spring size	Standard spring	Low torque spring	Standard spring
mm	KPa	KPa	KPa
350	0.41	2.6	2.9
400	0.39	2.7	3.0
450	0.33	2.7	2.9

※ For 905C, please consult sales staff.

- Cracking pressure (opening pressure) is minimum pressure that allows a fluid to flow stably in a forward direction. Flow would not be stable even a fluid flows under this pressure.
- Internal diameter of piping shall be equal to Pi or over. In case of lined pipe, take lining into accounts when you check internal diameter. JIS G3452 SGP, JIS G3454 Sch60 and under, JIS G3459 Sch40 and under and VP pipe are applicable. In addition, JIS G3454, JIS G3459 "Sch80" are also applicable in case of 905C.
- Internal diameter of gaskets contact part needs to be smaller than maximum internal diameter (Fi). JIS B2220 SOP, SOH, WN, IT, SW and TS (resin pipe) are applicable.
- In case of loose flange, internal diameter of flat collar (except for the rounded part) needs to be smaller than maximum internal diameter (Fi). JIS B2309 and SAS 363(type 2) are applicable.

903L Internal diameter of piping

Nominal size	Minimum internal diameter of piping	Maximum internal diameter

250	10	12-M20X190X50	12-M22X190X50	—	12-M30X320X60 ^{※1}
300	12	12-M20X220X50	16-M22X230X50	—	16-M30X365X60 ^{※1}
350	14	—	—	16-M22X300X45	16-M30X540X80 ^{※1}
400	16	—	—	16-M24X320X50	16-M36X590X80 ^{※1}
450	18	—	—	20-M24X320X50	—

※1 Bolt pitch for M30 and over is 3.

※ Material: SS400 unichrome plating

※ Length of bolt is calculated based on thickness of JIS B 2220:²⁰¹² steel pipe flange (except for 10K thin type), size of JIS B 1181:²⁰¹⁴ style 1 hexagon nut and 3mm thickness of gaskets.

※ Do not use rusted, damaged or deformed bolt or nut. Lubricate screws enough.

※ Number of bolt shown above is needed for one piece of valve.

Example

Long bolts : 12 - M22 × 185 × 45
 Quantity Nominal size(M) Length of bolt(L) Effective screw length(S)

Setting bolts (Hexagon bolts) : 4 - M30 × 95 × 65
 Quantity Nominal size(M) Length of bolt(L) Effective screw length(S)

Bata-Check Gasket

Commercially available gaskets which are appropriate for flange standard and fluid condition can be used. Our recommendation is as follows:

- Size : JIS B 2404 (size of flange used)
- Type : Seat gaskets (Non-metal flat gasket)
- Shape : Ring gaskets
- Material : JIS R 3453 joint sheet / Reinforced rubber / RPTFE
- Thickness : 1.5 to 3mm (3mm is recommended.)
- Quantity : 2 pieces/valve

※ In case of resin flange, use gaskets which is recommended by flange manufacturer.

※ Perform centering appropriately so that a gasket at outlet side does not distract plates.

Gaskets tend to protrude inner side due to pressure; especially they are made of rubber.

Using the superior characteristics of the best selling ELMY butterfly valve actuator, we developed an improved successor, the **New ELMY**. With a replaceable control circuit board, tough metal gears, new limit cam mechanism, a new clutch mechanism, and an improved watertight design, the **New ELMY** actuator is even better than before.

■ Features

- Circuit board is easily replaceable to meet different requirements.
- New adjustable limit switch cam plate.
- Waterproof design protects against rain water or condensation
- Declutchable handwheel for ease of operation and maximum safety.
- High output torque and compact in size.

New ELMY Terminal board connection diagram (Type 00)

Notes:

1. The FG terminal should be grounded.
2. If a space heater is used, the round terminal should be connected to terminals 1, 2, and 3.
3. The power sources for the control units are the same for both 100V and 200V series, however the actuator motors differ depending on the power source.

Terminal block screw size: M3 (with angular washer)

Wiring diagram

New ELMY Terminal board connection diagram (Type 0 to 4)

- (1) FG contact should be grounded.
- (2) If space heater is used, round contact should be connected to contacts 1 and 2.
- (3) Power source for control unit of 100V series and 200V series is same, but power source for actuator motor is not.

Terminal block screw size: M3 (with washer)

New ELMY Wiring diagrams (Control options) (Type 0 to 4)

Standard

With extra position limit switch (non-voltage)

• Purpose

To send non-voltage full-open and full-closed signals by switching on and off.

Limit switch contact development

Notes

- Each actuators should be controlled by one operation switch. If two or more actuators are controlled by one operation switch, there is a risk of causing a erroneous actuate by due to a loop circuit.
- OLS/SLS break contact at fully open/closed position. Auxiliary limit switch is output in front of the position of fully open/closed. Should not stop the valve operation by auxiliary limit switch output until it reaches fully open/closed position.
- Capacity of standard auxiliary limit switch is AC250V-10A (minimum voltage: 30V- minimum current 0.1A). In the case of this less than the minimum voltage or current, we will provide the lower current specification auxiliary limit switch upon request.

With intermediate limit switch

• Purpose

To send intermediate open and close signals by switching on and off, and to stop the valve at intermediate positions.

• Options

Intermediate limit switches (two, non-voltage)

Limit switch contact development

Notes

- Do not use a switch for two or more motor actuators, as the voltage will be transmitted to the other motor through the capacitor and cause malfunction.
- The contact capacity of the extra limit switch is 250 VAC-10 A (min. 0.1 A). For anything below this contact capacity (1 mA to 100 mA, 5 to 30 V), please use specifications for minute loads.

With potentiometer and extra position limit switch (non-voltage)

• Purpose

To control valve opening by resistance variations and send non-voltage full-open and full-closed signals by switching on and off.

• Options

135Ω or 500Ω potentiometer

Limit switch contact development

Notes

- Each actuators should be controlled by one operation switch. If two or more actuators are controlled by one operation switch, there is a risk of causing a erroneous actuate by due to a loop circuit.
- OLS/SLS break contact at fully open/closed position. Auxialiry limit switch is output in front of the position of fully open/closed. Should not stop the valve operation by auxiliary limit switch output until it reaches fully open/closed position.
- Capacity of standard auxiliary limit switch is AC250V-10A (minimum voltage: 30V- minimum current 0.1A). In the case of this less than the minimum voltage or current, we will provide the lower current specification auxiliary limit switch upon request.

New ELMY Wiring diagrams (Control options) (Type 0 to 4)

With speed controller unit

● Purpose

Set the valve open and close time.

● Options

135Ω or 500Ω potentiometer, heater

Notes

1. Do not use a switch for two or more motor actuators, as the voltage will be transmitted to the other motor through the capacitor and cause malfunction.
2. Extra limit switches work ahead of each opening and closing position of the valve. Therefore, if you stop the valve using signals from an extra limit switch, leakage may occur.

Type		0, 1, 2	2.5	3	4
Opening degree		0 to 90 degrees C			
Open and close time	50Hz	25/180sec	37/260sec	55/500sec	125/1100sec
	60Hz	20/150sec	30/210sec	50/440sec	105/900sec
Adjustment method		Adjustment trimmer			

With servo unit

Potentiometer and extra position limit switch (non-voltage)

● Purpose

Control the valve opening degree proportionally
 Input signal : 4 to 20mA DC (1 to 5V DC, 0 to 10V DC as option)
 Output signal : 4 to 20mA DC

For full-open / full-close : contact output

● Option

Servo unit 500Ω potentiometer

Notes

1. This diagram shows that the valve disc is at intermediate position.
2. Input signal and output signal is non-isolated.

Notes

1. The contact capacity of the extra limit switch is 250 VAC-10 A (min. 0.1 A).
 For anything below this contact capacity (1 mA to 100 mA, 5 to 30 V), please use specifications for minute loads.

Parts list for New ELMY (Type 0 to 4)

With servo unit inside of types 0, 1, 2 and 2.5

1 Terminal	9 RA: wiring connector
2 Dog for open position	10 DA: wiring connector
3 Dog for closed position	11 Trimmer for hysteresis adjustment
4 Potentiometer	12 Trimmer for zero adjustment
5 Connector for motor	13 Trimmer for span adjustment
6 Connector for motor capacitor	14 Trimmer for output zero adjustment
7 RA: connector for potentiometer	15 Trimmer for output span adjustment
8 DA: connector for potentiometer	

Remarks: When Z1 is adjusted, then please adjust S1 too.
When Z2 is adjusted, then please adjust S2 too.

With servo unit inside of types 3 and 4

1 Terminal	7 RA: connector for potentiometer
2 Dog for open position	11 Trimmer for hysteresis adjustment
3 Dog for closed position	12 Trimmer for zero adjustment
4 Potentiometer	13 Trimmer for span adjustment
5 Connector for motor	14 Trimmer for output zero adjustment
6 Connector for motor capacitor	15 Trimmer for output span adjustment

Remarks: When Z1 is adjusted, then please adjust S1 too.
When Z2 is adjusted, then please adjust S2 too.

Parts list for New ELMY with speed controller unit (Type 0 to 4)

Inside of types 0, 1, 2 and 2.5

1 Terminal	7 Connector for potentiometer
2 Limit switch cam	8 Connector for motor capacitor
3 Dog for open position	9 Connector for motor
4 Dog for closed position	10 Trimmer for closed position
5 Dog for open signal	11 Trimmer for open position
6 Dog for closed signal	

Inside of types 3 and 4

1 Terminal	9 Connector for motor
2 Limit switch cam	10 Trimmer for closed position
3 Dog for open position	11 Trimmer for open position
4 Dog for closed position	12 Connector for open signal
5 Dog for open signal	13 Connector for closed signal
6 Dog for closed signal	14 Connector for open limit switch
7 Connector for potentiometer	15 Connector for closed limit switch
8 Connector for motor capacitor

New ELMY Adjustable operating speed (Type 0 to 4)

Stroke time for open to close and close to open can be set independently.
See the trimmer position for operating speed adjustment.

Trimmer position and stroke time

Position		Type 0, 1 and 2		Type 2.5		Type 3		Type 4	
		50Hz	60Hz	50Hz	60Hz	50Hz	60Hz	50Hz	60Hz
1		25 sec	20 sec	37 sec	30 sec	55 sec	50 sec	120 sec	105 sec
		Tolerance 5 sec				Tolerance 5 sec			
2		90 sec	70 sec	130 sec	110 sec	250 sec	220 sec	500 sec	450 sec
		Tolerance 20 sec				Tolerance 40 sec			
3		180 sec	150 sec	260 sec	220 sec	500 sec	440 sec	1100 sec	900 sec
		Tolerance 40 sec				Tolerance 80 sec			

- (1) Carry out the procedure after the limit switch and stopper bolt are set.
- (2) Adjust the trimmer with a screwdriver following the table above.
- (3) Standard stroke time can be set by turning the trimmer fully in the clockwise direction.
- (4) Stroke time can be adjusted by turning the trimmer counterclockwise.

New ELMY Rated current

New MICOM ELMY III

The New MICOM ELMY III offers highly accurate controllability, and its various functions are easily set via communication with a personal computer.

■ Controller features

- Flow characteristics can be set at work site with PC.
- High reliability
- Adjustable operating speed
- Multiple functions
- Compact

New MICOM ELMY Ⅲ Specifications (Controller)	
Model	New MICOM ELMY Ⅱ
Input signal	4 to 20mA DC (input resistance 250 ohm) 1 to 5V DC
Non-voltage contact input	Open/close signal (a contact)
Output signal	4 to 20mA DC (load resistance 300 Ω)
Non-voltage contact output	Open/close contact signal (Capacity AC220V-0.3A, DC24V-1A) Alarm output for hunching and thermal rising (Capacity AC220V-0.3A, DC24V-1A) Power off output for excessive torque and thermal rising (Capacity AC220V-0.3A, DC24V-1A)
Operation frequency rate	50% ED or less
Inching operation	60 times/min. or less
Positioning accuracy	± 1% (For operation range of 90 degrees, input signal amplitude of 16mA during linear operation.)
Resolution	1/200 (For operation range of 90 degrees, input signal amplitude of 16mA during linear operation.)
Flow characteristic variation	Cv linear settings (concentric and eccentric type are built into controller.) Disc angle linear settings Flow linear settings
Input signal mode	Direct, reverse
Input signal failure mode	Stop, open, close or optional position
Output signal mode	Direct, reverse
Zero-span adjustment range	-5 to 95 degrees
Hysteresis adjustment range	0.5 to 4.0% at full span
Operation speed control	Range and operation speed can be adjusted.
Protection function	Limit switch at full open and close Mechanical stopper

Resolution is set at 1/100 at the time of shipment. If any other resolution is required, please contact us.

New MICOM ELMY Ⅲ Specifications (Actuator)						
Type	Type 0	Type 1	Type 2	Type 2.5	Type 3	Type 4
Output torque (N·m)	70	98	196	333	981	2000
Power source (V)	AC100, 200, 220 50/60Hz					
Motor capacity (W)	8W	20W	30W		90W	
Operating range	0 to 90 degrees					
Travel time (50／60Hz) (sec)	25/20 sec(0 to 90 degrees)			37/30 sec (0 to 90 degrees)	55/50 sec (0 to 90 degrees)	125/105 sec (0 to 90 degrees)
Insulation	Class E					
Enclosure	JIS C 0920 (IP 65), Class 5, dust and water-jet proof type					
Protect function	Built in mechanical thermal protector stopper at full open and close side					
Conduit connections	G1/2 (PF1/2) 2 port					
Manual operation	Detachable handle	Declutchable handwheel				
Motor protection	Built-in thermal protector					
Mechanical stopper	End of travel positioning bolt					
Environmental temperature during operation	－10 to 50 degrees C					
Environmental temperature during storage	－30 to 80 degrees C					
Paint finish	Epoxy-melanin baked with Munsell 2.5BG 6/12

New MICOM ELMY III Wiring diagram

New MICOM ELMY III Operation

New MICOM ELMY III Control functions

Function	By software	By DIP switch	Standard factory settings
Opening angle settings	☐	☐	0-90 or 0-70 degrees
Input signal settings	☐	☐	4-20mA
Output signal settings	☐	☐	4-20mA
Signal failure mode	☐	☐	Emergency stop
Signal failure mode variation	☐	☒	1mA or less is 5 sec.
Flow characteristic variation	☐	Signal linear, CV linear for concentric type of valve, and CV linear for eccentric type of valve	No correction (linear signal)
Hysteresis variation	☐	☒	Input signal: 1.0% Angle signal: 0.5%
Hunting setting	☐	☒	Time for judgment: 180 sec Frequency of operation: 90 Operation angle range: 10 degrees Average angle: 5 degrees
Hunting interval setting	☐	☒	Signal hysteresis transition: 0.5% Interval limit hysteresis: 2% Automatically returns to hysteresis of time of shipping after 6 hrs.
High frequency operation	☐	☒	When signal hysteresis exceeds 2% for hunting interval
Abnormal output shaft operation	☐	☒	30 sec. X 3 times
Temperature monitoring	☐	☒	Alarm: 50°C
Communication speed	☐	☒	9600bps
Logging data transmittal	☐	☒	—
Display of setting data	☐	☒	—

New MICOM ELMY III Initial setting mode at the time of shipment

Input signal	Reverse action
Output signal	Reverse action
Flow rate adjustment	No adjustment
Action at the time of abnormal situation	Emergency stop
Flow adjustment data	Hold the data before reset
Setting mode entry	Operation mode

New MICOM ELMY III Operating system

Usage environment	RS232C interface (Connector: D-sub 9-pin) PC that can run Windows 2000, ME or 98 (Please consult us regarding Windows XP support.) Connect to PC with dedicated cable.

New MICOM ELMY III Terminal board

Notes

1. Input and output signals are not insulated.
2. Use FG terminal for earth.
3. Priority is given to contact input of terminal Nos. 14 to 16 over input signals of Nos. 3 and 4. Even terminal No. 13 is set to AUTO.

Terminal block screw size: M3 (with washer)

Wiring diagram

New MICOM ELMY III Contacts

Terminals

	Terminal No.	Purpose	Capacity
Contact output	No. 7 (OPEN)	Outputs at full open position	AC220V-0.3A DC125V-0.5A DC24V-1A
	No. 8 (CLOSE)	Outputs at full closed position	
	No. 9 (COM)	COM for No. 7 and 8 terminals	
	No. 17 (STOP)	Outputs when abnormally stopped ¹	
	No. 18 (ALARM)	Outputs when alarm signal transmitted ²	
	No. 19 (COM)	COM for No. 17 and 18 terminals	
Contact input	No. 13 (COM)	COM for No. 14, 15 and 16 terminals	
	No. 14 (OPEN)	Connect No. 13 when valve moves toward open direction	
	No. 15 (CLOSE)	Connect No. 13 when valve moves toward closed direction	
	No. 16 (AUTO/MAN)	Switching of auto and manual operation.	

*1: No. 17 works during signal failure, abnormal torque or temperature increase.

*2: No. 18 works during hunting or abnormal temperature increase.

Wiring diagram example
for combination of auto and manual
Operation by 4-20 mA signal.
Closed during manual operation.

Operation by 4-20 mA signal.
Open during manual operation.

New MICOM ELMY Ⅲ Function and dip switch position

Setting item	Setting of dip switch							
	SW1	SW2	SW3	SW4	SW5	SW6	SW7	SW8
Input signal								
Reverse action	OFF						OFF	OFF
Direct action	ON						OFF	OFF
Output (feedback) signal								
Reverse action		OFF					OFF	OFF
Direct action		ON					OFF	OFF
Opening degree adjustment								
None(Linear in accordance with signal)			OFF	OFF			OFF	OFF
Cv linear for concentric valve			OFF	ON			OFF	OFF
Cv linear for eccentric valve			ON	OFF			OFF	OFF
For customer use			ON	ON			OFF	OFF
Signal failure mode								
Stop					OFF	OFF	OFF	OFF
Fully open					ON	OFF	OFF	OFF
Fully close					OFF	ON	OFF	OFF
Memorized opening degree					ON	ON	OFF	OFF
*Initialization of setting data								
Hold							OFF	OFF
Initialize							ON	OFF

Notes

- Reset is necessary after switching.
- An asterisk means all setting data (such as valve opening degree, input signal, zero span of output single, etc.) will be initialized.
- Input signal: Reverse action: signal increase open
Direct action: signal increase close
- Output signal: Reverse action: valve open signal increase
Direct action: valve close signal increase
- Shaded areas mean initial setting mode at the time of shipment.

PMK-SRF

The PMK-SRF is an electrical spring return type actuator that does not require a power supply unit and protects your piping from damage during emergencies. It serves as a safety countermeasure for various fluid lines, from water, sewage and steam lines, to chemical and powder lines.

■ Features

- Reliable motorized spring return system
- Does not require a power supply unit
- On and off operations, proportional control, and emergency shut-off all in one device

PMK-SRF Type Standard Specifications							
Type		PMK-005SRF		PMK-010SRF		PMK-030SRF	
Output torque		49N·m		98N·m		294N·m	
Motor power source		AC100V 50/60Hz	AC200V 50/60Hz	AC100V 50/60Hz	AC200V 50/60Hz	AC100V 50/60Hz	AC200V 50/60Hz
Power consumption (VA)	Rated	50	50	50	50	100	100
	Startup	120	120	120	120	400	400
Travel time (50/60Hz) (sec)	Opening and closing	18/15		36/30		66/55	
	Emergency shut-off (return)	Max. 3		Max. 5		Max. 10	
Current value (A)	Spring winding	0.5	0.25	0.5	0.25	1.0	0.5
	Rated	1.2	0.6	1.2	0.6	4.0	2.0
Time rating		30 minutes					
No. of poles		4					
Insulation		Class E					
Motor protection		Thermal protector					
Space heater		Option					
Position limit switch		One each for fully open and fully closed (contact capacity: AC250V, 10A)					
Torque limit switch		None					
Mechanical limit stop		End of travel positioning bolt built-in					
Conduit connections		G3/4 at two ports					
Enclosure		JIS C 0920, Class 4, dust and water-jet proof type (Equivalent IP54)					
Manual operation		None					
Ambient temperature		- 10 to 50 degrees C					
Coating		Silver hammer net (Munsell N7)					
Options		① Potentiometer (135 Ω, 500 Ω) ② Electro-electro Positioner (4 to 20 mA DC I/O)					

Note: A sun cover is required if you will be using this product outdoors. For details please consult us.

PMK-SRF Dimensions

PMK-SRF Dimensions / Weight

Lightweight, easy-to-handle, and completely waterproof Miniature motorized actuator for 90 degrees rotation rotary valves

Can be submersed (IP68)

Uses special gaskets and O-rings, with double-sealed terminals.

Case and covers of lightweight, high-rigidity aluminum alloy

Open/close torque and limit switches

Limit switch open/close both 1a1b.

Torque switch open/close both 1a1b.

Combines worm and spur high-speed reduction ratio gears

Exd II BT4 pressure-resistant, explosion-proof configuration available (complies with IEC standard)

Simplified external wiring

32 terminal contacts, 3-G1 cable feed-in port.

ISO flanges

Both open and close stoppers included

Includes handle and automatic recovery select lever

Rich range of options

- Auxiliary contact (limit switch)
- Opening angle transmitter
- R/I converter
- Proportional controller
- Electronic controller

Electronic controller

Seitroller

Inputs the continuous DC signal from the adjuster or other system, compares it to valve angle (feedback potentiometer), and implements proportional control of valve. (Includes Seimitter functions.) Single-phase supply only.

Seimitter

Converts the valves opening angle signal (change in potentiometer resistance) to a continuous DC signal (4 to 20 mA DC), enabling remote monitoring angle.

SRJ Specifications						
Type		SRJ-010	SRJ-020	SRJ-060	SRJ-1	SRJ-2
Output torque (Nm)		125	250	600	1000	2000
Power source		AC100V/110V, 200V/220V 50/60Hz Single-phase AC200V/220V,AC400V/440V 50/60Hz Triple-phase

The LTKD type is a motorized actuator suitable mainly for valve sizes 350A and higher, and uses three-phase 200 V and 400 V power supplies. In addition to on-off control, it can be used for slot-ring control because of its built-in electric positioner (seitroller). It also supports special specification requirements.

■Features

- Utilizes dedicated high-torque motor.
- Highly reliable counter-gear-type cam limit switch
- Output shaft dual sleeve system
- Supports wide range of output torques and open-close times by combining motors of differing capacities.

LTKD Specifications							
Type	LTKD-01		LTKD-02		LTKD-05		LTKD-1
Motor capacity (Wk)	0.2	0.4	0.4	0.75	0.75	1.5	1.5
Weight (kg)	55	58	72	83	127	130	187
Power source (V)	AC200, AC220, AC400V, AC440 50/60Hz Three phase						
Rating (min)	15 min. (With brake: 30 min.)						
Number of poles	4						
Insulation	Class B (option class F and H)						
Motor protection	None (Please provide thermal relay separately.)						
Space heater	Supplied as standard specification (Rated power: 15W)						
Position limit switch	1 each for fully open and fully closed (contact capacity: AC250V, 5A)						
Torque limit switch	1 each for fully open and fully closed (contact capacity: AC250V, 15A)						
Brake	Optional (Will not be supplied as standard.)						
Conduit connection	G1 at two locations (for control) and G3/4 (for motor)						
Enclosure	JIS C 0920 (IP 55), class 5, dust and water-jet proof type						
Manual operation	Always (round handle and built-in manual return clutch)						
Ambient temperature	- 10 to 50 degrees C						
Coating	Lacquer primer (Munsell N7)						
Options	①Potentiometer 500Ω, 1kΩ ②Intermediate limit switch (no voltage) ③Synchro reciever, transmitter ④Seimitter (R/I converter) ⑤Seitroller (DC4 to 20mA I/O) ⑥Withstand pressure anti-explosion type (d2G4)						

Remark: Open and close time differs depending on motor gear ratio (number of sleeve rotations) and type of secondary reducer.

We have pursued top-level performance that carries on the excellence of the T-matic cylinder, our top-selling pneumatic actuator for butterfly valves. Employing an NAMUR mount, this unit is compact and lightweight, and offers high output and further heightened perfection as a complete system.

Features

- Direct valve installation with bottom ISO mounting.
- Completely direct mounting of valve installation section.
- NAMUR mount at pneumatic port connections and accessories interface.

New T-DYNAMO Standard specifications

	Double-acting type					Single-acting type			
Type	T35	T85	T200	T380	T750	T85S	T200S	T380S	T750S
Torque (N·m)(When supply pressure is 0.4MPa and rotation angle is 0°)	35	85	200	380	750	30	65	116	240
Supply air pressure condition/temperature	-10 to 60 degrees C								
Air Supply Pressure	0.4 to 0.7MPa								
Body shell max (MPa)	1.05MPa								
Air connection (Rc)	Rc (PT) 1/4								
Rotating angle	90°								
Ambient temperature	-10 to 60 degrees C								
Travel time(sec) with speed controller	1 to 15 sec	2 to 15 sec	3 to 15 sec	7 to 20 sec	12 to 25 sec	2 to 15 sec	6 to 15 sec	8 to 20 sec	15 to 25 sec

※The opening and closing times are the times in the case of a single unit of a cylinder with a standard speed controller (SP-K017-Z03-006) and a solenoid valve (PCS2408-03-100MC) when the air supply pressure is 0.4MPa. The opening and closing times depend on pneumatic piping system, etc.

New T-DYNAMO Principle of operation

Double-acting type cylinder

- (1) The cylinder space which is enclosed by the case ① and the covers ⑥ and ⑦ is divided into airtight chambers ③ and ④ by the pistons ⑤ and the piston packing ②.
- (2) The shaft ② penetrates the chamber ④ of the case. The yoke ③ is fitted in the hole across the shaft in such a way that it allows it to slide in the hole. The top of the yoke is connected with the parallel pins ③ so it rotates in accordance with the movement of the pistons.
- (3) The compressed air enters chamber ③ through port A and pushes the pistons. The air in chamber ④ is exhausted through port B as the pistons move due to a pressure difference between the two chambers. Integrated with these pistons, the parallel pins ③ also move and torque in the shaft is generated.

Single-acting type cylinder

- (1) The cylinder space which is enclosed by the case ① and the covers ⑥ and ⑦ is divided into airtight chambers ③ and ④ by the pistons ⑤ and the piston packing ②.
- (2) The shaft ② penetrates the chamber ④ of the case. The yoke ③ is fitted in the hole across the shaft in such a way that it allows it to slide in the hole. The top of the yoke is connected with the parallel pins ③ so it rotates in accordance with the movement of the pistons.
- (3) The compressed air enters chamber ④ through port B and pushes the pistons. The air in chamber ③ is exhausted through port C as the pistons ⑤ move and the spring ④ is squeezed due to a pressure difference between the two chambers. Integrated with these pistons ⑤, the parallel pins ③ also move and torque in the shaft is generated.
- (4) When air supply to Port B is stopped, the pistons are pushed back due to the force of the spring ④ and torque in the shaft is generated.

New T-DYNAMO Dimensions

Double-acting type

Single-acting type

New T-DYNAMO Output torque curves

Double-acting type

Single-acting type (spring returned type)

- ① The table shows the torque at an operating air pressure of 0.4 MPa.
- ② Output torque for an operating air pressure of P MPa is given by : $P \times (\text{torque value obtained from the table}) / 0.4$. (Only double-acting type cylinder)
- ③ In the case of single-acting type cylinders, the spring force does not change even if the operating air pressure is changed. Thus the torque indicated by the dotted lines is constant regardless of the operating air pressure.
- ④ In the case of single-acting type cylinders, the output torque value at open→close is different from that at close→open. The continuous lines and dotted lines indicate the torques respectively.

	7G (Open with pressure)	7F (Close with pressure)
Continuous line	Torque at close→open with air pressure	Torque at close→open with spring
Dotted line	Torque at open→close with spring	Torque at open→close with air pressure

- ⑤ A valve for the single-acting type cylinder should be selected referring to the torque indicated with a dotted line.

New T-DYNAMO Output torque

Double-acting type

(N·m)

Type	Supply pressure (MPa)			
	0.4	0.5	0.6	0.7
T35	35	43	52	61
T85	85	106	127	148
T200	200	250	300	350
T380	380	475	570	665
T750	750	937	1125	1312

Single-acting type (spring returned type)

(N·m)

Type	Supply pressure (MPa)								Spring	
	0.4		0.5		0.6		0.7			
	0°	90°	0°	90°	0°	90°	0°	90°	0°	90°
T85S	55	30	76	51	97	72	118	93	30	55
T200S	135	65	185	115	235	165	285	215	65	135
T380S	264	116	359	211	454	306	549	401	116	264
T750S	510	240	697	427	885	615	1072	802	240	510

New T-DYNAMO Air Consumption

(1) Required air consumption

Double-acting type

$$VD = (A+B) \left(\frac{P+0.1013}{0.1013} \right) N$$

Single-acting type

$$VS = (B) \left(\frac{P+0.1013}{0.1013} \right) N$$

VD : Double-acting type cylinder air consumption (Nℓ)

VS : Single-acting type cylinder air consumption (Nℓ)

A,B : Cylinder capacity (ℓ)

P : Working pressure (MPa)

N : Operating frequencies in a given time (1 round trip=1)

(2) Air consumption within a unit time

Double-acting type $CD = \frac{VD}{t}$

Single-acting type $CS = \frac{VS}{t}$

CD : Double-acting type cylinder air consumption (Nℓ/sec)

CS : Single-acting type cylinder air consumption (Nℓ/sec)

t : Unit time (sec)

(Note) The compressor should have a larger capacity than air consumption calculated in above (1) and (2).

•Double-acting type

type	Cylinder capacity (ℓ)	
	A	B
T35	0.2	0.2
T85	0.4	0.5
T200	0.8	1.1
T380	1.8	2.1
T750	3.2	4.6

•Single-acting type

type	Cylinder capacity (ℓ)
	B
T85S	0.5
T200S	1.1
T380S	2.1
T750S	4.6

This exploded view diagram illustrates the assembly of a mechanical component, likely a pump or valve. The main assembly consists of a central housing (1) with various internal and external components. Key parts include a large spring (42) at the top, a central shaft assembly (2, 15, 2, 4, 34, 19, 8) with seals (21, 23, 25, 26, 29), and a bottom flange (6) with mounting hardware (46, 48). The diagram uses numbered callouts (1-62) to identify individual parts. Two inset views, both labeled 'T750S', provide detailed views of specific sub-assemblies: the left inset shows a seal (43) and a pin (45) assembly, while the right inset shows a vertical shaft assembly with seals (36, 15) and a pin (2).

New T-DYNAMO Solenoid valves

■ Purpose

The purpose of a solenoid valve is to use electrical signals to remotely change the air flow to operate the valves.

■ Standard specifications

Type	Five-port/2-position non explosion-proof solenoid valve (single solenoid)	Five-port/2-position non explosion-proof solenoid valve (double solenoid)	Five-port/2-position explosion-proof solenoid valve (single solenoid)	Five-port/2-position explosion-proof solenoid valve (double solenoid)
Item	PCS2406-K090-Z03-132-**-**	PCD2406-K090-Z04-120-**-**	MK15G-8-**-DMI	MK15DG-8-**-DMI
Manufacturer	Kuroda	Kuroda	Kaneko	Kaneko
JIS symbol				
Applicable cylinder type	T35 to T750/T85S to T750S	T35 to T750/T85S to T750S	T35 to T750/T85S to T750S	T35 to T750/T85S to T750S
Mounting method	Direct mounting	Direct mounting	Direct mounting	Direct mounting
Air connection port size	Rc1/4 (IN, EXH)	Rc1/4 (IN, EXH)	Rc1/4 (IN, OUT, EXH)	Rc1/4 (IN, OUT, EXH)
Effective sectional area	10mm ²	10mm ²	20mm ²	20mm ²

Class of insulation	—	—	d2G4	d2G4
Wiring method	Conduit terminal	Conduit terminal	Conduit terminal	Conduit terminal
Conduit entry	G1/2	G1/2	G1/2	G1/2
Manual operating	Non lock bush type	Non lock bush type	Manual bottom lock type	Manual bottom lock type
Operating temperature	—5 to 50 degrees C	—5 to 50 degrees C	—20 to 60 degrees C	—20 to 60 degrees C
Weight	0.2kg	0.27kg	1.2kg	1.7kg

Remark: The above are standard TOMOE-compatible solenoid valves. It is also possible to install solenoid valves other than those listed above such as a double solenoid or 3-port solenoid valve. For details, please consult us.

New T-DYNAMO Filter regulators (Pressure reducer with filter)

■ Purpose

Filter regulators are used to eliminate oil, water, and dust from the operating air in order to protect pneumatic accessories (solenoid valve and cylinder, etc.) and to keep operating pressure at an adequate and constant level (about 4 to 5 K).

■ Standard specifications

Type	P31EA22MMBNNP
Manufacturer	Kuroda
JIS symbol	
Applicable cylinder type	T35 to T750/T85S to T750S
Set pressure range	0.03 to 0.85MPa
Pressure gauge connection port	Rc1/8
Operating temperature	—5 to 60 degrees C
Air connection port size	Rc1/4
Filtration	5μm
Attachment	Direct mounting
Option	—
Weight	0.19kg

Remark: The above are standard TOMOE-compatible filter regulators. It is also possible to install filter regulators other than those listed above. For details, please consult us.

Weight	0.98kg	0.28kg	0.74kg	0.77kg

Remark: The above are standard TOMOE-compatible limit switches. It is also possible to install limit switches other than those listed above. For details, please consult us.

New T-DYNAMO Proximity switches

■ Purpose

Proximity switches are used to convert the valve position (full close, full open, half open) into electric signals for lamp indication at a remote location.

■ Standard specifications

Product	M18 shielded type (Can be embedded in metal.)	Direct-mounting proximity switch
Type	E2E-X7D1-N	IND2004DARKG
Manufacturer	OMRON	efector
With power source	DC 2-wire system	DC 2-wire system
Motion mode	NO	NO
Detecting distance	0 to 5.6mm	4mm±10%
Object to be detected	Magnetic metal (stainless steel possible)	Dedicated target
Power source voltage	DC12 to 24V	DC10 to 36V
Current consumption	3 to 100mA	min 4mA
Class of insulation	IP67	IP67
Operating temperature	−25 to 70 degrees C	−25 to 80 degrees C
Connection	Cord draw type (2m)	Cord draw type (2m)
Contacts	On or off detection with one Two for both on and off detection	2-point switch detection possible with a single unit
Weight	0.43 kg (including mounting plate): 1 piece	0.23 kg (including mounting plate): 1 piece

Remark: The above are standard TOMOE-compatible proximity switches. It is also possible to install limit switches other than those listed above such as a DC 3-wire, AC 2-wire, AC/DC 2-wire or connector-type proximity switch. For details, please consult us.

Option	—	—	—
Weight	2.3kg	2.6kg	1.2kg

Remark: The above are standard TOMOE-compatible positioners. It is also possible to install positioners other than those listed above. For details, please consult us.

New T-DYNAMO Manual operation unit

■ Purpose

The operation unit is for manual operation of the pneumatic cylinder when air supply fails.

■ Standard specifications

	Function	Type	Applicable cylinder	Remarks
1	Manual lever	Lever	T35, T85, T200, T380 (Double-acting)	(1) Be sure to open the bypass valve. (2) Never use for any single acting type cylinder.
2	Side handle	Screw handle	T85S, T200S, T380S, T750S (Single-acting)	(1) Restore the valve angle in the position air supply shutted off when restarting the automatic operation.
3	Manual gear unit	Worm gear	T200, T380, T750 (Double-acting)	(1) Restore the valve angle in the position air supply shutted off when restarting the automatic operation.

※Do not input signal to the solenoid valve or positioner during operation.

※To be combined use of manual gear unit and bypass valve for Double-acting.

New T-DYNAMO Free-angle adjuster

■ Purpose

Free-angle adjuster enables to set open/close angle depending on users' demand.

■ Standard specifications

Function	Type	Applicable cylinder	Remarks
Free-angle adjuster	Side adjust screw	T35 to T750/T85S to T750S (Air to open)	Remove the cylinder cover, loosen the lock nut and insert the bolt to adjust the stroke angle. Tighten the lock nut and attach the cylinder cover in position.

New T-DYNAMO Speed controllers

■ Purpose

For double-acting cylinders, the speed controller is used as meter out (exhaust throttle) and for single-acting cylinders, it is used as meter in (suction throttle).

■ Standard specifications

Type	MV-2-Z03-017	SP-K017-Z03-006
Manufacturer	Kuroda	Kuroda
JIS symbol		
Applicable cylinder type	With PCS 2406-K090-Z132 solenoid valve mounted	Other than indicated at left
Function	With silencer	—
Needle revolution	10 rotations	11 rotations
Adjustable range	5 to 15 secs.	5 to 15 secs.
Air connection port size	—	Rc1/4
Attachement	Screw into solenoid valve exhaust port (Rc 3/8)	Install to cylinder
Weight	0.06kg	0.095kg

SP-K017-Z03-006

Remark: The above are standard TOMOE-compatible speed controllers. It is also possible to install speed controllers other than those listed above. For details, please consult us.

Remark: In case of Single-action (spring open, type 7F), speed controller type is SP-K017-Z12-003-F.

New T-DYNAMO Silencers

■ Purpose

Silencers eliminate noise at the exhaust ports on various kinds of pneumatic accessories.

■ Standard specifications

Type	AN103-KM6	AN20-02
Manufacturer	SMC	SMC
JIS symbol		
Applicable cylinder type	T35 to T750/T85S to T750S	T35 to T750/T85S to T750S
Effect of muffing	25dB (A)	30dB (A)
Operating temperature	5 to 60 degrees C	5 to 60 degrees C
Port size	φ6	Rc1/4
Attachement	Install to exhaust port together with one-touch pipe coupler.	Screw into exhaust port.
Weight	0.02kg	0.02kg

Remark: The above are standard TOMOE-compatible silencers. It is also possible to install silencers other than those listed above. For details, please consult us.

New T-DYNAMO Lock-up valves

■ Purpose

When air supply fails, the lock-up valve automatically stops the line until pressure is restored and keeps the operating unit of the cylinder at the stay-put position.

■ Standard specifications

Type	IL211-02	IL201-02
Manufacturer	SMC	SMC
JIS symbol		
Applicable cylinder type	T35 to T750	T85S to T750S
Effective sectional area	17mm ²	17mm ²
Operating temperature	—5 to 60 degrees C	—5 to 60 degrees C
Air connection port size	Rc1/4	Rc1/4
Signal pressure connection port	Rc1/4	Rc1/4
Weight	0.64kg	0.43kg

Remark: The above are standard TOMOE-compatible lock-up valves. It is also possible to install lock-up valves other than those listed above. For details, please consult us.

New T-DYNAMO Examples of standard air circuits for pneumatic actuators

Standard and semi-standard accessories and their use

Example of standard air circuit for on/off operation (double-acting type)

Shown below are standard circuits to open and close a butterfly valve driven by a double-acting air cylinder while transmitting electrical signals from a remote control room. Switching of the flow of operation air is performed by the solenoid valve, and detection of the open/close position of the valve is performed by a limit switch, with feedback of the electrical signals to the control room.

1 Butterfly valve opens when solenoid valve is energized.

2 Butterfly valve closes when solenoid valve is energized.

3 Butterfly valve closes when SOL.1 is energized. Butterfly valve opens when SOL.2 is energized.

→Once SOL.1 is energized, the condition is maintained even after it is de-energized unless SOL.2 is energized.

Example of standard air circuit for control operation (double-acting type)

Shown below are examples of standard circuits in which a P/P or E/P positioner is attached to the butterfly valve driven by a double-acting pneumatic cylinder to give instruction signals from a remote control room to the positioner. This adjusts the valve opening exactly and quickly in proportion to the signals, and also detects the open/close position of the valve by a limit switch which sends feedback of the electrical signals to the control room.

4 Direct action

Butterfly valve closes when signal increases.

Butterfly valve opens when signal decreases.

→The butterfly valve opens fully when the input signal goes off under a state of assured air supply.

5 Reverse action

Butterfly valve opens when signal increases.

Butterfly valve closes when signal decreases.

→The butterfly valve closes fully when input signal goes off under a state of assured air supply.

New T-DYNAMO Example of standard air circuits for pneumatic actuators

Example of standard air circuit for on/off operation (single-acting type)

Shown below are examples of standard circuits to operate the valve automatically to the safe side of open or close when the operating air supply or power supply fails in the middle of operation.

- 1 Butterfly valve closes when air supply falls.
(Opened by pressure when solenoid valve is energized.)
Butterfly valve closes when power supply falls.
(Opened by pressure when solenoid valve is energized.)

- 2 Butterfly valve opens when power supply falls.
(Closed by pressure when solenoid valve is energized.)
Butterfly valve opens when air supply falls.
(Closed by pressure when solenoid valve is energized.)

Example of standard air circuit for control operation (single-acting type)

Shown below are examples of standard circuits in which the P/P or E/P positioner is attached to the butterfly valve driven by a single-acting pneumatic cylinder to adjust valve opening exactly and quickly in proportion to the signals transmitted by a local controller or from a remote control room. This will also detect the open/close position of the valve by a limit switch which sends feedback of the electric signals to the control room. When the operating air supply or power supply fails, the valve is automatically operated to the safe side of open or close.

3 Direct action

Butterfly valve closes when signal increases.

Butterfly valve opens when signal decreases.

→Butterfly valve opens when air supply fails.

4 Reverse action

Butterfly valve opens when signal increases.

Butterfly valve closes when signal decreases.

→Butterfly valve closes when air supply fails.

The TGA model is a double-action pneumatic actuator perfect for on/off control of the various types of butterfly valves. With an optional positioner, it can also be used for flow rate control. It mainly used for the medium to large-sized valves of size 350mm or more. The operation principle is that air pressure forces the piston inside the cylinder into a linear reciprocating motion, causing the trunnion coupled to the rod to drive the arm and rotate the output shaft.

TGA Specifications								
	TGA-100	TGA-125	TGA-140	TGA-160	TGA-180	TGA-200	TGA-220	TGA-250
Output torque (N·m) (When supply pressure is 0.4 MPa and rotation angle is 0° or 90°)	585	1069	1510	2274	3194	4339	5976	8619
Supply pressure (MPa)	0.4~0.7*1

TGA Operation principle

As chambers A1 - A2 and B1 - B2 are connected through copper tubes as shown in the figure at left (single-acting cylinder is provided only with chambers A2 and B1), feeding air into port "S" will generate a thrust to push the piston toward the left. The linear motion of the piston is converted to a clockwise rotary motion of the output shaft through the trunnion. Residual air in chamber B is exhausted through port "O". Feeding air to port "O" causes the reverse of the action described above, rotating the output shaft counter-clockwise.

TGA Air consumption

Type	Cylinder capacity (ℓ)	
	A (O→S)	B (S→O)
TGA-100	1.980	1.980
TGA-125	3.629	3.629
TGA-140	5.113	5.113
TGA-160	7.713	7.713
TGA-180	10.847	10.847
TGA-200	14.730	14.730
TGA-220	20.229	20.229
TGA-250	29.278	29.278

(1) Required air consumption

Double-acting type

$$VD=(A+B) \left(\frac{P-0.1013}{0.1013} \right) N$$

Single-acting type

$$VS=(A \text{ or } B) \left(\frac{P+0.1013}{0.1013} \right) N$$

VD : Double-acting type cylinder air consumption (Nℓ)

VS : Single-acting type cylinder air consumption (Nℓ)

A, B : Cylinder capacity (ℓ)

P : Working pressure (Mpa)

N : Operating frequencies in a given time (1 round trip=1)

(2) Air consumption within a unit time

Double-acting type $CD= \frac{VD}{t}$

Single-acting type $CS= \frac{VS}{t}$

CD : Double-acting type cylinder air consumption (Nℓ/sec)

CS : Single-acting type cylinder air consumption (Nℓ/sec)

t : Unit time (sec)

Remark: The compressor should have a larger capacity than the air consumption calculated above in (1) and (2).

TGA Output Torque Curve

Double-acting type (TGA)

TGA Output Torque

Type	Rotation angle (°)									
	0	10	20	30	40	50	60	70	80	90

- This table shows typical accessory combinations. Accessories not shown in this table can also be installed. For details, please consult us.

TGA Solenoid valves

■ Purpose

The purpose of a solenoid valve is to use electrical signals to remotely change the air flow to operate the valves.

■ Standard specifications

Item	Five-port/2-position, non explosion-proof, solenoid valve (single solenoid)	Five-port/2-position, non explosion-proof, solenoid valve (single solenoid)	Five-port/2-position, non explosion-proof, solenoid valve (single solenoid)	Five-port/2-position, explosion-proof, solenoid valve (single solenoid)
Type	PCS2406-MC	PCS2408-MC	PCS2415-MC	MB15G-10AE12PU-TMS

TGA Filter regulator (Pressure reducer with filter)

■ Purpose

Filter regulators are used to eliminate oil, water, and dust from the operating air in order to protect pneumatic accessories (solenoid valve and cylinder, etc.) and to keep operating pressure at an adequate and constant level (about 4 to 5 K).

■ Standard specifications

Type	AW20-02B-2-B-X490	AW30-03B-2-B-X490	AW40-04B-2-B

TGA Manual operation unit

■Purpose
The operation unit is for manual operation of the pneumatic cylinder when air supply fails.

■Standard specifications

	Function	Type	Applicable cylinder	Remarks
1	Manual gear unit	Worm gear	Double acting type TGA-100 to 250	(1) Be sure to open the bypass valve. (2) Attach and detach the clutch exactly before and after operation.

TGA Stroke adjuster

■Purpose

The stroke adjuster sets the valve opening freely from the outside.

■Standard specifications

Function	Type	Applicable cylinder	Remarks
Adjust screw	Side adjust screw	Double acting type TGA-100 to 250	Attach long adjusting screws and lock nut to the cylinder cover.

TGA Speed controllers

■Purpose

For double-acting cylinders, the speed controller is used as meter out (exhaust throttle) and for single-acting cylinders, it is used as meter in (suction throttle).

■Standard specifications

Type	AS2000-02	AS3000-03	AS4000-04
Manufacturer	SMC	SMC	SMC

TGA Silencers

Purpose

Silencers eliminate noise at the exhaust ports on various kinds of pneumatic accessories.

Standard specifications

Type	AN20-02	AN30-03	AN40-04
Manufacturer	SMC	SMC	SMC
JIS symbol			
Effect of muffling	30dB (A)	30dB (A)	30dB (A)
Operating temperature	5 to 60 degrees C	5 to 60 degrees C	5 to 60 degrees C
Port size	Rc1/4	Rc3/8	Rc1/2
Attachment	Screw into exhaust port of solenoid valve.	Screw into exhaust port of solenoid valve.	Screw into exhaust port of solenoid valve.
Weight	0.02kg	0.03kg	0.04kg

Remark: The above are standard TOMOE-compatible silencers. It is also possible to install silencers other than those listed above. For details, please consult us.

TGA Lock-up valves

Purpose

When air supply fails, the lock-up valve automatically stops the line until pressure is restored and keeps the operating unit of the cylinder at the stay-up position.

Standard specifications

Type	IL211-02
Manufacturer	SMC
JIS symbol	
Effective sectional area	17mm ²
Operating temperature	—5 to 60 degrees C
Air connection port size	Rc1/4
Signal pressure connection port	Rc1/4
Weight	0.64kg

Remark: The above are standard TOMOE-compatible lock-up valves. It is also possible to install lock-up valves other than those listed above. For details, please consult us.

TGA Quick exhaust valve

■Purpose

Quick exhaust valves act in the reverse way to a speed controller. The valve shortens the open/close operation time by improving the exhaust efficiency of the cylinder.

■Standard specifications

Type	AQ2000-02	AQ3000-03	AQ5000-04
Manufacturer	SMC	SMC	SMC
JIS symbol			
Effective sectional area	40mm ² (EXH PORT)	70mm ² (EXH PORT)	115mm ² (EXH PORT)
Operating temperature	—5 to 60 degrees C	—5 to 60 degrees C	—5 to 60 degrees C
Air connection port size	Rc1/4	Rc3/8	Rc1/2
Weight	0.1kg	0.21kg	0.69kg

Remark: The above are standard TOMOE-compatible quick exhaust valves. It is also possible to install quick exhaust valves other than those listed above. For details, please consult us.

TGA Booster relay

■Purpose

A booster relay is used to make switching time shorter and to improve response in cases when the piping distance from the meters and the actuator is very far, and when the capacity of the actuator is very large, or when the actuator has a large control valve with a positioner.

■Standard specifications

Type	IL100-02	IL100-03
Manufacturer	SMC	SMC
JIS symbol		
Output flow rate	600L/min (SUP=0.5MPa)	600L/min (SUP=0.5MPa)
Air consumption	Within 3L/min. (OUT=0.1MPa)	Within 3L/min. (OUT=0.1MPa)
Operating temperature	—5 to 60 degrees C	—5 to 60 degrees C
Repeatability	Within ±1%FS	Within ±1%FS
Hysteresis	Within 1%FS	Within 1%FS
Air connection port size	Rc1/4	Rc3/8
Signal pressure connection port	Rc1/4	Rc1/4
Weight	0.56kg	0.56kg

Remark: The above is a standard TOMOE-compatible booster relay.
It is also possible to install booster relays other than that listed above.
For details, please consult us.

Standard and semi-standard accessories and their use

Example of standard air circuit for on/off operation (double-acting type)

Shown below are standard circuits to open and close a butterfly valve driven by a double-acting air cylinder while transmitting electrical signals from a remote control room. Switching of the flow of operation air is performed by the solenoid valve, and detection of the open/close position of the valve is performed by a limit switch, with feedback of the electrical signals to the control room.

1 Butterfly valve opens when solenoid valve is energized.

2 Butterfly valve closes when solenoid valve is energized.

3 Butterfly valve closes when SOL.1 is energized.
Butterfly valve opens when SOL.2 is energized.

→Once SOL.1 is energized, the condition is maintained even after it is de-energized unless SOL.2 is energized.

Example of standard air circuit for control operation (double-acting type)

Shown below are examples of standard circuits in which a P/P or E/P positioner is attached to the butterfly valve driven by a double-acting pneumatic cylinder to give instruction signals from a remote control room to the positioner. This adjusts the valve opening exactly and quickly in proportion to the signals, and also detects the open/close position of the valve by a limit switch which sends feedback of the electrical signals to the control room.

4 Direct action

Butterfly valve closes when signal increases.

Butterfly valve opens when signal decreases.

→The butterfly valve opens fully when the input signal goes off under a state of assured air supply.

5 Reverse action

Butterfly valve opens when signal increases.

Butterfly valve closes when signal decreases.

→The butterfly valve closes fully when input signal goes off under a state of assured air supply.

TG-S

The TG-S type spring return pneumatic actuator is suitable for on/off control for medium and large sized valves. With an optional positioner, it can also be used for flow control. Air pressure and the spring force the piston inside the cylinder into a linear reciprocating motion, causing the pin coupled to the piston rod to rotate the output shaft.

TG-S Specifications				
	TG-10S	TG-12S	TG-14S	TG-20S
Torque (N·m) (0.4MPa)	260	600	1250	3250
Supply pressure (MPa)	0.4~0.7 ^{※1}			
Body shell max (MPa)	1.0			
Port size	Rc3/8			Rc1/2
Rotating angle	-3 to +93°			
Operating fluid	Dry air			
Working temperature range (degrees)	0 to 80 degree C ^{※2}			
Rotating speed range (sec.)	4 to 20	6 to 20	11 to 20	18 to 40
Painting	Epoxy primer finish (Munsell N7)			

※ Supply pressure: 0.4MPa, without accessories

※1 If used for the TRITEC(TT1, TT2) with over 0.5MPa supply pressure, and forecasting over 10,000 times operation. Please ask us about cylinder specifications.

※2 Please ask us when used at working temperature of more than 60 degree C.

TG-S Operation principle

As shown in the picture on the right, the chamber A₁ is connected to the chamber A₂ with copper tubes. The same is true for chamber B₁ and B₂. Operating air is supplied through port "O" and fills chambers B₁ and B₂. The air moves pistons ① and ② to the right, so that the spring is tensed. When thrust is transmitted to the pin on the piston rod to give the output shaft a force to produce counter-clockwise rotation through the arm, which rotates the shaft counter-clockwise. Residual air in chambers A₁ and A₂ is exhausted through port "S". During air failure mode, the spring forces the piston ② to move left, when thrust is transmitted to the pin on the piston rod to give an output shaft a force to produce clockwise rotation through the arm, which rotates the shaft clockwise.

TG-S Air consumption

Type	Cylinder capacity (ℓ)
TG-10S	3.59
TG-12S	6.36
TG-14S	12.56
TG-20S	36.29

(1) Required air consumption

Double-acting type

$$VD = (A+B) \left(\frac{P-0.1013}{0.1013} \right) N$$

Single-acting type

$$VS = (A \text{ or } B) \left(\frac{P+0.1013}{0.1013} \right) N$$

VD : Double-acting type cylinder air consumption (Nℓ)

VS : Single-acting type cylinder air consumption (Nℓ)

A, B: Cylinder capacity (ℓ)

P: Working pressure (Mpa)

N: Operating frequencies in a given time (1 round trip=1)

(2) Air consumption within a unit time

Double-acting type $CD = \frac{VD}{t}$

Single-acting type $CS = \frac{VS}{t}$

CD: Double-acting type cylinder air consumption (Nℓ/sec)

CS: Single-acting type cylinder air consumption (Nℓ/sec)

t: Unit time (sec)

Remark: The compressor should have a larger capacity than the air consumption calculated in above in (1) and (2).

TGS Output Torque Curve

● Single-acting type (spring returned type)

TG-S Output Torque

(N·m)

Type	Supply pressure (0.4 MPa)		Spring power	
	0°	90°	0°	90°

TG-S Filter regulator (Decompression valve with filter)

Purpose
Filter regulators are used to eliminate oil, water, and dust from the operating air in order to protect pneumatic accessories (solenoid valve and cylinder, etc.) and to keep operating pressure at an adequate and constant level (about 4 to 5 K).

Standard specifications

Type	AW30-03B-X490	AW40-04B-2
Manufacturer	SMC	SMC

TG-S Manual operation unit

■Purpose

The operation unit is for manual operation of the pneumatic cylinder when air supply fails.

■Standard specifications

	Function	Type	Applicable cylinder	Remarks
1	Manual operation unit	Screw handle	Single acting type TG-10S to 20S	(1) Attach and detach the lock screw exactly before and after operation. (2) Adjustment is possible in the full close position.

TG-S Stroke adjusters

■Purpose

The stroke adjuster sets the valve opening freely from the outside.

■Standard specifications

Function	Type	Applicable cylinder	Remarks
Adjust screw	Side adjust screw	Single acting type TG-10S to 20S	Attach long adjusting screws and lock nut to the cylinder cover.

TG-S Speed controllers

■ Purpose

For double-acting cylinders, the speed controller is used as meter out (exhaust throttle) and for single-acting cylinders, it is used as meter in (suction throttle).

■ Standard specifications

Type	AS3000-03	AS4000-04
Manufacturer	SMC	SMC
JIS symbol		
Applicable cylinder type	TG-10S to 14S	TG-20S
Needle revolution	8 rotations	8 rotations
Adjustable range	5 to 15 secs.	5 to 15 secs.
Operating temperature	—5 to 60 degrees C	—5 to 60 degrees C
Air connection port size	Rc3/8	Rc1/2
Attachment	Install to cylinder air connect port	Install to cylinder air connect port
Weight	0.13kg	0.21kg

Remark: The above are standard TOMOE-compatible speed controllers. It is also possible to install speed controllers other than those listed above. For details, please consult us.

TG-S Silencers

■ Purpose

Silencers eliminate noise at the exhaust ports on various kinds of pneumatic accessories.

■ Standard specifications

Type	AN20-02	AN30-03	AN40-04
Manufacturer	SMC	SMC	SMC

Example of standard air circuit for on/off operation (single-acting type)

Shown below are examples of standard circuits to operate the valve automatically to the safe side of open or close when the operating air supply or power supply fails in the middle of operation.

- 1 Butterfly valve closes when air supply falls.
(Opened by pressure when solenoid valve is energized.)
Butterfly valve closes when power supply falls.
(Opened by pressure when solenoid valve is energized.)

- 2 Butterfly valve opens when power supply falls.
(Closed by pressure when solenoid valve is energized.)
Butterfly valve opens when air supply falls.
(Closed by pressure when solenoid valve is energized.)

Example of standard air circuit for control operation (single-acting type)

Shown below are examples of standard circuits in which the P/P or E/P positioner is attached to the butterfly valve driven by a single-acting pneumatic cylinder to adjust valve opening exactly and quickly in proportion to the signals transmitted by a local controller or from a remote control room. This will also detect the open/close position of the valve by a limit switch which sends feedback of the electric signals to the control room. When the operating air supply or power supply fails, the valve is automatically operated to the safe side of open or close.

3 Direct action

Butterfly valve closes when signal increases.

Butterfly valve opens when signal decreases.

→Butterfly valve opens when air supply fails.

4 Reverse action

Butterfly valve opens when signal increases.

Butterfly valve closes when signal decreases.

→Butterfly valve closes when air supply fails.

3C

The 3C actuator is a vertical cylinder suitable for installations where space is limited. The piston rotates while moving vertically which causes the output shaft to rotate at the same time to open and close the valve. Air control devices such as limit switches and solenoid valves, and manual devices can be installed.

3C Specifications							
	AT5-80	AT5-100	AT5-120	AT5-150	AT5-180	AT5-220	AT5-250
Torque (N·m) (when 0.4MPa)	52	125	180	350	580	1320	1650
Supply pressure (MPa)	0.4 to 0.7						
Body shell max (MPa)	1.0						
Port size	Rc1/4			Rc3/8		Rc1/2	
Rotating angle	90°						
Operating fluid	Dry air						
Working temperature range (degrees)	−15 to 80						
Rotating speed range	5 to 15 secs.						10 to 20 secs.
Weight (kg)	3.3	5.5	8.7	15.4	28.0	47.0	70.0
Painting	Epoxy primer finish (Munsell N7)						

Diaphragm

This type of actuator is used exclusively for rotary valves. The edge of the diaphragm is free, and by attaching a ring, the linear motion of the actuator is converted to a smooth rotational motion in the valve stem. Model 280 is a multiple spring type with four or six small internal springs, while Model 400 is a single spring type with one large spring. Both models are actuators that feature friction-free operation, excellent efficiency, and high output.

Diaphragm Specifications		
Type	280H	400HP
Structure	Floating system	
Diaphragm area (cm ²)	350	725
Max. supply pressure (KPa)	280	
Spring range (KPa)	60 to 220	80 to 200
Max. stroke (mm)	40.8	58.3
Applicable valve size (kg)	28.0 (Without top handle) (including bracket)	57.1 (Without top handle) (including bracket)

Remark: For both types 280 and 400, the manual handle (top handle) is available as an option.

Diaphragm Operation principle

This type is exclusively used for rotary valves. The nose of the diaphragm is free, and by attaching a ring, linear motion of the actuator is smoothly converted to rotational motion of the valve stem. Type 280 is composed of four or six small springs, while Type 400 is a single spring type with one large spring. Both models feature friction-free operation, excellent efficiency, and high output.

Hydraulic Cylinder

This type of cylinder is compatible with hydraulic systems used, for example, in marine vessels. While compact, it outputs by converting hydraulic energy into a high torque that is proportional to the pressure.

Hydraulic Cylinder Specifications

Hydraulic Cylinder Specifications	
Standard allowable pressure	105bar
Maximum allowable pressure	210bar
Test pressure	1.5 x operation pressure
Torque range	5.1 to 5418.4 kgfm (for 210bar)
Working temperature range	−20 to 80 degrees C
Operating oil viscosity	15 to 200cst
Rotating angle	90 degrees

Manual Actuators

Manual actuators consist of three types: the lock lever, the worm gear and the center handle type. The design depends on the model of valve that it will be used with. The photographs below show the manual actuators for the 700G.

Lock lever type

Opening and closing operations are conducted by merely turning the lever 90 degrees. The 10-stage locking mechanism allows flow rate control.

Worm gear type

The worm wheel works as a gear reducer to greatly reduce the torque required for extremely light open and close operations. The valve opening angle can be set as desired for completely stepless control of the flow rate.

Center handle type

The planetary gear works as a gear reducer to greatly reduce the torque required for extremely light open and close operations. The valve opening angle can be set as desired for completely stepless control of the flow rate.

Options

Long-neck and long handle shaft

Installs to gear boxes or extends handle shafts.

Degree of open output

By installing a limit switch, a fully open or fully closed signal is output.

Screw indicator

Tells, right at the device, how open it is even if the handle shaft is extended.

Chain wheel

Valves in high or difficult to reach places can be operated by a chain.

Handle lock

Prevents handle rotation caused by vibration and can maintain a mid-way open position.

Reverse operator

Enables operation with the handle shaft placed on the opposite side.

Post indicator

Degree of opening can be verified at a glance.

Indicator for thermal retention enclosures

Indicator allows verification even if the gear box is enclosed for thermal insulation.

Options in the diagrams above are shown with the 2U worm gear. For details, please consult us.

CONDITION MONITORING UNIT & CLOUD SERVICE

Condition Monitoring Unit & Cloud Service

Tom Probe series

TPro1100,1700,1900,TPC

541

Tom Probe Series

The **Tom Probe Series** consists of new devices which record the operational status of quarter-turn valves automatically, 24 hours a day, 365 days a year. The unit quickly detects abnormalities and defects in the valves, and notifies these externally, via various interfaces.

The Tom Probe Series can perform a partial stroke test. The units also have a new function, the ASF (Active Safety Function), which performs partial stroke tests periodically based on the calendar in the **TPro1100**.

The unit supports the whole range of applications, from status monitoring to maintenance work in general.

The unit manages centrally the data required for valve maintenance work.

The support contents can be selected as necessary.

(1) Total support

Valve operational status is uploaded to the cloud server, and the status can be checked from anywhere. Email notification of an alarm occurrence is also available.

(2) Remote status monitoring

The status of valves in a remote location, such as a plant, can be monitored remotely via a PC.

(3) Data collection

Valve status data required for maintenance can be stored in the TPro1100, and the data can be transferred to a PC as necessary.

The unit can easily be installed to an existing valve, and can be used as a data logger immediately.

TPro1100 <Unit main body>

Operation recording unit for quarter-turn valves.

The unit records the operation of a valve driven by an air cylinder, 24 hours a day, 365 days a year.

The unit records the valve operational data continuously and sends the data to other devices. The unit can perform a partial stroke test (PST). The unit also has a new function, ASF (Active Safety Function), which performs a partial stroke test automatically, based on the calendar in the TPro1100.

TPro1700 <Remote control unit>

A remote control unit providing centralized control and status display of the TPro1100.

A maximum of 15 TPro1100 units in a dedicated communication network can be controlled.

The unit has a function for creating a communication network, connecting the TPro1100 to a PC with the data collection application TPro1900 installed.

TPro1900 <Application>

A freeware program which allows configuration of various settings and data collection for the TPro1100 via a PC.

Through the dedicated communication network, the application allows checking of open/close status, trend evaluation results, lists partial stroke test results for a maximum of 15 TPro1100 units, and saves the operational data from the TPro1100 to a PC.

The application also has the "Angle profile" function, which retrieves and displays the motion of the disc during valve operation in real time.

Tom Probe Connect <Cloud service>

Valve operational data collected by the TPro1900 is uploaded to a cloud server through the Internet.

The data is accumulated on the cloud server, which allows a check of the valve status from anywhere at any time.

The operational data history including valve opening/closing is visualized, and a variety of device errors can be checked from anywhere.

TPro1100 <Unit main body> Quarter-turn valve operation starting unit

Features

Operation and Setting Mode

Control recording	Operation mode for recording the open/close control of a valve and the operational status of a valve in order to perform open/close control and various tests
Data logger	Operation mode for recording the operational status of a valve which is controlled by devices other than this unit
Setting	Mode for creating settings for various kinds of operation recording

Power Supply Specifications

Input power supply is AC100-240V, 50Hz/60Hz. The unit can be used in many overseas countries.

Status Output

The unit outputs open/close status, operation mode, abnormal status, etc. of a unit to be monitored to external control devices, such as sequencers. The status of the devices can be transmitted in detail by altering settings on the main body.

Full-close output	Full-open output	Operation mode output	Open/Close test output	Open/Close test result output	Trend alert output

Various Control and Output Interfaces

Error Notification

The unit continuously records the operational status of the valve. If any abnormal value is detected, the unit provides notification of the abnormality through external output or communication.

Test Items

Open/Close +50% over error
Open/Close -50% over error
Open/Close + over error
Open/Close - over error
TA open time over
TA close time over
PST/ASF not reached set angle
PST/ASF timeout

Data Save Mode

8000 or more units of data can be saved. Values including opening/closing time, and values of commercial sensors (up to three) can be recorded. The unit has three recording modes for various tests.

Continuous Mode	When the memory is full, the oldest data is overwritten by new data.
One Shot Mode	When the memory is full, recording stops.
Accumulation Mode	When the memory is full, old data is reduced, and new data is saved. This is an original recording system where new data is accumulated while old data is kept.

Valve Partial Stroke Test Function

Partial stroke test (PST) is a test method to check the operational status by opening and closing a valve a little. The test can be performed by combining a solenoid valve for driving a cylinder with the TPro1100. Additionally, the ASF (Active Safety Function) which performs the partial stroke test automatically based on the calendar in the TPro1100 is inbuilt. The opening/closing test interval can be selected as every day, every week, or every month.

Product Specifications

Attachment shape	VDI / VDE3845
Dust-proof and waterproof	Rotary Actuators (Quarter-turn) and Auxiliary Equipment IP65 equivalent
Conduit tube connection	500 mm length for both power supply cable and communication cable
Main body main material	Aluminum die-casting
Display function	Open/Close indicator
Power supply voltage	AC100V-AC240V Single-phase 50/60Hz
Ambient operating temperature	-20°C -80°C (No condensation)
Ambient storage temperature	-20°C -80°C(No condensation)
Interface specifications	◆ I/O contact input/output (Open/close instruction, PST instruction, status output) ◆ Analog input (3 points for sensors) ◆ TOMOE's dedicated communication (RS485)
Functions	◆ Solenoid valve direct drive function ◆ PST function (One mode out of 13 modes is selected.) ◆ ASF function (One mode out of 13 modes is selected.) ◆ Trend data logging function (8000 data for each Open, Close, PST and ASF are held in the main body.)

External Dimensions

TPro1700 <Remote control unit/Option>

Achieving Centralized Control and Status Display

Features

Relay Function

The unit has a function for creating a communication network, connecting the TPro1100 main body unit to a PC with the TPro1900 application installed. A maximum of 15 TPro1100 units can be controlled.

Saving on Wiring

Installation requires only two communications cables and a power supply cable to the unit.

Reduced Installation Costs

Since the unit is equipped with control switches and LED status display lamps, no separate control board is required.

Product Specifications

Attachment shape	Attachment with various stays
Dust-proof and waterproof	IP65 equivalent
Conduit tube connection	500 mm length for both power supply cable and communication cable
Main body main material	Main body: ABS resin
Display function	LED open/close indication, power indicator lamp, test result indication, controlled unit ID 7-segment indication
Power supply voltage	AC100V-AC240V Single-phase 50/60Hz
Ambient operating temperature	-20°C - 60°C (No condensation)
Ambient storage temperature	-20°C - 60°C (No condensation)
Interface specifications	◆ Switch input (Open/close instruction, PST instruction) ◆ Compliance with USB standards ◆ TOMOE's dedicated communication (RS485)
Functions	◆ Communication gateway function (USB-RS485) ◆ Supply of operation instructions to a selected unit

External Dimensions

TPro1900 <Application>

Various Settings and Data Collection Controlled with a PC

Features

Integrated Management Function

The application displays information from all TPro1100 units in the network in a list form. The indicator lamps on the screen also allow checking of open/close status, trend evaluation results, and open/close test results for the managed valves.

Device Information

Valve name, date and time in the main body, etc. are settable. Additional information is also available, including total operating time and the number of openings/closings, which is required for planning maintenance.

Setting Information

Checks can be made on good-status standard values learned by the TPro1100, and various settings. Conditions can be configured for the partial stroke test and the adhesion prevention test. In addition, it is easy to check at a glance the TPro1100 status and settings, such as the presence of the sensor connected to the TPro1100, data accumulation mode, detail of outputs to external devices, easily preventing incorrect settings being used.

Remote Data Collection

The valve operation data accumulated in the TPro1100 can be collected from a remote location when used in conjunction with the TPro1700 (Remote control unit/Option). The status of valves located in difficult-to-access areas can be kept track of easily.

"Angle Profile" Function

- Function for real-time retrieval and display of disc motions during valve operation.
- The retrieved information can be displayed in graph form and the data can be saved.
 - Valve motion during operation can be checked.
 - Motion can be displayed in graph form in real time.
 - Y-axis: Angle / X-axis: Time
 - You can scroll or cease scrolling freely.
 - Sharing the valve operational data
 - Data can be saved in a CSV format.
 - Data can be saved manually at any time. When operation is detected, the data can be saved automatically also.

Trend Data Collection

The trend data accumulated by the TPro1100 can be collected in three ways.

Main body direct collection	Data is collected directly through the USB port on the TPro1100.
Remote collection	Data from any designated TPro1100 in the communication network is collected via TPro1700.
Integrated management collection	Data from each TPro1100 in the communication network is collected via TPro1700.

Tom Probe Connect <Cloud service>

Centralized management of valve information on website

Features

High-precision Monitoring System

Data is accumulated on a cloud server.
Comparison with past operational data is available.

No need for continuous monitoring

The e-mail error notification system notifies you of valve operation problems.
Thus, continuous monitoring of equipment by personnel on-site is not necessary.

Checks available at any time

Valve status can be checked from anywhere, at any time, because data is accumulated on the Internet.
This enables you to obtain advice from experienced personnel in remote locations. You can also use the cloud service as a tool to check the past problem history on-site at inspection.

Ease of introduction

Thanks to a cloud server, the initial investment is small and server management is not required.
In comparison with a software purchase, service is more easily available because you need only sign up for the necessary service period. In addition, the web application is updated with the latest functions.
Preventive maintenance has been attracting attention as the latest maintenance method. If preventive maintenance is preferred, "CBM*" can be started with minimum investment.

*CBR (Condition Based Maintenance) = "CBM" is a preventive maintenance method: "Maintenance (such as routine device replacement) is not performed while equipment is operating stably, but only when maintenance is judged to be required."

Checks available at any time

Valve status can be checked from anywhere, at any time, because data is accumulated on the Internet.
This enables you to obtain advice from experienced personnel in remote locations. You can also use the cloud service as a tool to check the past problem history on-site at inspection.

Security

In order to provide users with safe access to the Tom Probe Connect site, the system uses TLS1.2, which is the global standard for internet encryption communication systems. Use of TLS1.2 is also strongly recommended in global security standards (PCI DSS) in the credit card industry. This cloud service uses data centers in Japan which are fully secured.

Flange Standards	575

Valve Types and Features

The three basic functions of valves are: 1. to stop flow, 2. to keep a constant direction of flow, and 3. to regulate the flow rate and pressure. To select the correct valve to fulfill these functions properly, an outline of the different types of valves and their features is given below.

Butterfly valve

- Valve shaped like a butterfly.
- Tight shut-off and can be used as a control valve.
- Little resistance to flow (allows smooth flow).
- Optimal for automated operation with a low operating torque and 90 degrees operating angle.
- Lightweight and compact (large diameter models are also available).

Check valve

- For use when flow is only in one direction.
- Lightweight disc allows vertical installation.
- High operating speed prevents water hammer.

Gate valve

- Like its name implies, the gate is lowered to cut off the path of flow.
- For use as an on/off valve (not suitable as a control valve).
- Little resistance to flow when fully open (allows smooth flow).
- Long stroke requires time to open and close; not suitable for quick operation.

Globe valve

- The globe-shaped body controls the fluid into a S-shaped flow.
- Tight shut-off and can be used as a control valve.
- Large resistance to flow (does not allow smooth flow).
- Much power is required to open and close the valve (not suitable for large sizes).

Ball valve

- Valve stopper is ball-shaped.
- For use as an on/off valve (not suitable as a control valve).
- Little resistance to flow when fully open (allows smooth flow).
- Optimal for automated operation with a 90 degrees operating angle.
- Advanced technology is required to manufacture ball.

Comparison of butterfly valves with other valves (using 100mm diameter TOMOE 700G model valve)

Butterfly valve and globe valve

Item	Butterfly valve	Globe valve
Pressure loss(ξ)	0.3	1.5
Flow characteristics	Equal %	Equal %
Rangeability	10:1	30:1

Butterfly valve and ball valve

Item	Butterfly valve	Ball valve
Pressure loss(ξ)	0.3	0.05
Flow characteristics	Equal %	Quick open
Rangeability	10:1	3:1

Butterfly valve and gate valve

Item	Butterfly valve	Gate valve
Pressure loss(ξ)	0.3	0.2
Flow characteristics	Equal %	Quick open

Comparison of Cv value (Butterfly valve=1)

Comparison of pressure loss (Butterfly valve=1)

Inherent flow characteristics

Valve Sizing Procedures

It is essential to understand the valve sizing formula and selection procedure when determining the size of a valve. The following is the proper selection procedure. The valve sizing calculation is based on ISA.

1. Judge if the flow condition is subcritical or critical based on the given flow condition.
2. Calculate the Cv value by putting the data into an appropriate formula.
3. Select the size of the valve using the Cv value chart. Consider the following points when sizing the valve.
 - ① A proper adjustment of the Cv calculation should be made based on the piping adjustment coefficient F_p if a valve is located between reducers.
 - ② If the result of the Cv calculation is over 80% compared to the full Cv value, select a valve one size larger.

Example: For fresh water with $P_1 = 0.3$ MPa, $P_2 = 0.25$ MPa, flow rate = 100 m³/h, the calculated Cv will be 164. If 80 mm, 507V is selected, the rated Cv is 176. The calculated Cv (164) is over 80% of rated the Cv (176) in this case. We recommend 100 mm, 507V.
 - ③ If no ΔP is given, 5 to 10% of the pump outlet pressure should be used as the assumed ΔP for valve sizing.

Cv Value Calculation

Cv value calculation

Fluid		Pressure conditions	Formula
Liquid	Volume flow rate	Sub critical $\Delta P < F_L^2 (\Delta P S)$	$C_v = 11.6q \sqrt{\frac{Gf}{\Delta P}}$
		Critical $\Delta P \geq F_L^2 (\Delta P S)$	$C_v = 11.6 \frac{q}{F_L} \sqrt{\frac{Gf}{\Delta P S}}$
	Mass flow	Sub critical $\Delta P < F_L^2 (\Delta P S)$	$C_v = \frac{11.6W}{\sqrt{Gf \Delta P}}$
		Critical $\Delta P \geq F_L^2 (\Delta P S)$	$C_v = \frac{11.6W}{F_L \sqrt{Gf \Delta P S}}$
Gas	Volume flow rate	Sub critical $\Delta P < F_L^2 \frac{P_1}{2}$	$C_v = \frac{Q}{3.01} \sqrt{\frac{GT}{\Delta P (P_1 + P_2)}}$
		Critical $\Delta P \geq F_L^2 \frac{P_1}{2}$	$C_v = \frac{Q \sqrt{GT}}{2.62 F_L \cdot P_1}$
	Mass flow	Sub critical $\Delta P < F_L^2 \frac{P_1}{2}$	$C_v = \frac{4627W}{\sqrt{\Delta P (P_1 + P_2) Gf}}$
		Critical $\Delta P \geq F_L^2 \frac{P_1}{2}$	$C_v = \frac{5343W}{F_L \cdot P_1 \sqrt{Gf}}$
Saturated vapour	Mass flow	Sub critical $\Delta P < F_L^2 \frac{P_1}{2}$	$C_v = \frac{7098W}{\sqrt{\Delta P (P_1 + P_2)}}$
		Critical $\Delta P \geq F_L^2 \frac{P_1}{2}$	$C_v = \frac{8206W}{F_L \cdot P_1}$
Super-heated vapour	Mass flow	Sub critical $\Delta P < F_L^2 \frac{P_1}{2}$	$C_v = \frac{7098W (1 + 0.00126T_{sh})}{\sqrt{\Delta P (P_1 + P_2)}}$
		Critical $\Delta P \geq F_L^2 \frac{P_1}{2}$	$C_v = \frac{8206W (1 + 0.00126T_{sh})}{F_L \cdot P_1}$

Symbol Legend

Symbol

Cv:	Valve flow coefficient	
FL:	Pressure recovery coefficient

Calculation for piping geometry factor

$$F_p = \left\{ 1 + \frac{\left\{ 0.5 \left(1 - \left(\frac{d}{D1} \right)^2 \right)^2 + 1.0 \left(1 - \left(\frac{d}{D2} \right)^2 \right)^2 \right\} \times \left(\frac{C_v}{d^2} \right)^2}{0.00214} \right\}^{-\frac{1}{2}}$$

Fp:	Piping geometry factor
Cv:	Valve flow coefficient
d:	Valve size (mm)
D1:	Inlet pipe size (mm)
D2:	Outlet pipe size (mm)

Calculation for modified Cv value

$$CvR = F_p \cdot Cv$$

CvR : Revised Cv value

Conversion Formula for Reference

Pressure loss coefficient $\zeta \leftrightarrow$ Cv value

$$\zeta = 21.38 \times \frac{D^4}{Cv^2}$$

$$Cv = 4.624 \times \frac{D^2}{\sqrt{\zeta}}$$

D: Inside diameter of pipe (cm)

Cv value $\rightarrow$ Kv value

Kv value is used in Europe.

It shows the flow rate (m³/h) of drinking water at a pressure of 1 bar and temperature of 5–30 degrees C.

$$Kv = \frac{Cv}{1.167}$$

Pressure loss coefficient $\zeta \rightarrow$ Kv value

$$Kv = 4.0 \times \frac{D^2}{\sqrt{\zeta}}$$

D: Inside diameter of pipe (cm)

Cv value $\rightarrow$ Av value

Av value is a SI unit.

$$Av = \frac{24}{10^6} \times Cv$$

Length of pipe

$$L = 8.5 \times \frac{D^{4.87}}{Q^{1.85}} \times \Delta P$$

D: Inside diameter of pipe (cm)

Q: Flow rate (ℓ/min)

ΔP : Pressure difference (kPaA)

Reference: For performance appraisal of fire safety and disaster prevention equipment, the equivalent pipe length is measured based on the flow rates in the table below.

Nominal dia.	Flow rate (ℓ/min)
50mm	800
65mm	900
80mm	1350
100mm	2100
125mm	3300
150mm	4800
200mm	8500
250mm	13000
300mm	19000

Pressure difference

$$\Delta P = \frac{1}{102} \cdot \zeta \cdot \frac{V^2}{2g} \gamma$$

ζ : Pressure loss coefficient

ΔP : Pressure difference (kPa)

g: Acceleration of gravity 9.8 m/sec²

γ : Specific gravity (water = 1000) (kg/m³)

V: Flow velocity (m/sec)

Formula for leak rate

① Find leak rate for seat leakage from the graph for the allowable seat leak standard by model

② Find flow conditions for:

P1: valve inlet pressure (kPaA)

P2: valve outlet pressure (kPaA)

ΔP : differential pressure, $P_1 - P_2$ (kPa)

Gf: density at inlet side (density for water in case of liquid, for air in case of gas)

G: density

T: fluid temperature (K)

Cv: factor for valve at full open

In case of liquid

$$q = \frac{A}{11.6} \times \frac{1}{\sqrt{\frac{Gf}{\Delta P}}}$$

In case of gas

$$Q = \frac{3.01A}{\sqrt{\frac{GT}{\Delta P (P_1 + P_2)}}}$$

q = calculated leak rate for liquid (m³/h)

Q = calculated leak rate for gas (m³/h)

A = seat leak ($1 \times 10^{-5} Cv, 1 \times 10^{-4} Cv$)

$\rightarrow$ (sample) Cv value for 302Y 100mm = 432
 Seat leak rate standard at temperature 150°C
 and valve inlet press 1.0Mpa = 1×10^{-5}
 $A = 1 \times 10^{-5} \times 432 = 0.00432$

Guidance for Vacuum Use

Leak amounts are predicted values based on testing at room temperature with new valves. If you will be using in a range that exceeds the above table, please consult us.

Velocity Calculation

Velocity limitation

Velocity limitations are shown below:

Type of fluid		Velocity limitation (continuous operation)
Liquid	Replaceable rubber seat	3 m/s
	Vulcanized rubber seat	5 to 6 m/s
Gas, vapour		120 to 200 m/s
Steam	Saturated steam	50 to 80 m/s
	Superheated steam	80 to 120 m/s

* Velocity limitation varies depending on the valve models. Please consult us for further information.

Pipe line velocity calculation

For liquids

$$V = 354 \times \frac{Q}{D^2}$$

For gases and vapours

$$V = 124.5 \times \frac{Q(T+273)}{D^2 \cdot P_2}$$

For steam

$$V = 354 \times \frac{Q \cdot U}{D^2}$$

Where:

V: Flow velocity (m/sec)

Q: Flow rate

Liquid (m³/h)

Gas [At 15 degrees C, 101325 Pa] (m³/h)

$$= \text{Nm}^3/\text{h} \times \frac{288}{273}$$

Steam (kg/h)

U: Specific volume of valve-outlet (m³/kg)

D: Nominal size (mm)

P2: Valve-outlet pressure (kPaA)

T: Temperature (degrees C)

Noise Prediction Methods and Countermeasures

Noise measuring method

The following are methods recommended by ISA.

Note: Parts surrounded by dotted lines are optional.

Fig. 1 Laboratory test unit by ISA-RP59.1

Fig. 2 Position of microphone in plant by ISA-RP59.2

Noise calculation formula for 507V and 508V Types

For gases

$$SP = -10.7 + 10 \log (C_v \cdot FL \cdot P_1 \cdot P_2) + 18.5 \log (D) - 30 \log (t/t_{40}) + 12 \log (P_1/P_2 - 1.05) - 10 \log (no) + SG$$

For liquids

$$SP = 10 \log (C_v) + 12 \log (0.0102 \times (P_{2crit} - P_2)) + 16 \log (P_2 - P_v) - 10 \log (no) + 18.5 \log (D) - 30 \log (t) + *26.5$$

Notes regarding liquids:

1. When the pressure difference across the valve $\Delta P (= P_1 - P_2)$ is smaller than 5% of P_1 , the formula above cannot be applied.
2. For $0.7P_1 - P_2 \leq 6.86$, substitute 0 dBA for $12 \log (0.0102 \times (P_{2crit} - P_2))$ in the formula above, and also 12.7 for 26.5, the coefficient with *mark.

Where:

SP:	Noise value [sound pressure level at 91 cm]	(dBA)
C_v :	Flow coefficient in actual conditions	
P_1 :	Valve upstream pressure	(kPaA)
P_2 :	Valve downstream pressure	(kPaA)
FL:	Pressure recovery coefficient (507V: 0.72)	
D:	Nominal pipe diameter	(mm)
t:	Pipe wall thickness	(mm)
t 40:	Pipe wall thickness of Sch #40	(mm)

no: Apparent valve orifice coefficient

50mm = 10	150mm = 18
80mm = 14	200mm to 400mm = 30
100mm = 16	

SG: Gas component modification coefficient

Saturated vapour = -2, overheated vapour = -3
Natural gas = -1, air = 0

P_{2crit} :	$P_1 - 0.3 (P_1 - P_v)$	(kPaA)
P_v :	Vapour pressure of liquid	(kPaA)

Data

Noise calculation formula for valves other than 507V and 508V Types

Formulas are in accordance with those introduced by ISA.

For gases

$$SP = 10 \log (X \cdot \eta \cdot 10^9 \cdot C_v \cdot F_L \cdot 2.105 \cdot P_1 \cdot P_2) - TL + SG + 3$$

When liquid cavitation is generated

$$SP = 10 \log (C_v \cdot F_L) + 8 \log (0.1451 \times (P_{2crit} - P_2)) + 20 \log (0.1451 \times (P_2 - P_v)) + 33$$

Where:

SP: Noise value [sound pressure level at 91cm] (dBA)

Cv: Flow coefficient in actual conditions

FL: Pressure recovery coefficient

P₁: Valve upstream pressure (kPaA)

P₂: Valve downstream pressure (kPaA)

m: Weight of pipe wall (kg/m²)

η: Apparent valve orifice coefficient (butterfly valve: n = 1.4)

TL: Transmission loss → Except for valves releasing directly into the air.

$$= 17 \log_{10} \left(\frac{3072 \times 1.4m}{\sqrt{C_v \cdot F_L}} \right) - 36 \text{ (dBA)}$$

*P_{2crit}: $P_1 - F_L^2 (P_1 - P_v)$ (kPaA)

P_v: Vapour pressure of liquid (kPaA)

X: Conversion fraction of mechanical output

$$= \frac{P_1 - P_2}{0.47 P_1} \quad X = 1 \text{ even if } X \text{ is bigger than } 1.$$

SG: Gas property factor

η: Acoustical efficiency coefficient (Refer to page Data-11.)

Note: When the difference between K_c and F_L² exceeds 10% of K_c, substitute K_c for F_L².

Specific Gravity SG

Data

Valve noise reduction countermeasures

Aerodynamic noise is discussed here.

Noise can be reduced at the following points:

1 Noise source

2 Sound insulation

When selecting a countermeasure, controllability of process, initial cost and maintenance cost should be considered along with noise evaluation and noise type.

Various factors should be discussed between the customer and manufacturer. Please refer to the section "Calculation of Estimated Cavitation" and its countermeasure to reduce and prevent cavitation noise.

Countermeasures for noise source

There are two countermeasures for noise source.

(1) Adoption of low noise valve

- ① 507V and 508V types: Max. possible reduction is 10 dBA.
- ② Globe type low noise valve: Max. possible reduction is 15 to .30 dBA.

(2) Countermeasure at valve downstream side

- ① Insert resistance plate: Max. possible reduction is 15 dBA.

Example of low noise unit

Sound insulation

This countermeasure does not reduce sound generation itself.

- ① Increase of pipe wall thickness (pipe schedule)
If it doubles, 5 dBA can be reduced.
- ② Soundproof lagging
In this countermeasure, piping is covered with layers of heat insulating materials (rock wool), lead plates, or iron plates, etc.
- ③ Prepare sound insulating box or wall
In order to reduce noise effectively, combine the various methods mentioned above.

Example: Pipe lagging materials

Calculation of Estimated Cavitation

Cavitation generation in butterfly valves

Cavitation is caused by low pressure areas in fluids. There are four causes of low pressure areas:

Fig. 1 Butterfly valves in nearly closed position

- (1) Fluid is compressed, contraction flow exists, and flow velocity is increased. Then, pressure reduces.
- (2) Low pressure area inside vortexes at valve-outlet side.
- (3) Low pressure area is produced at the boundary between the fluid flowing at high velocity and objects such as the protruding portion of the valve-moulded surface, heads of taper pins, and hubs, etc.
- (4) When the valve body or disc is vibrating at high frequency, the flow is disturbed and air bubbles form in the fluid.

The main causes of cavitation generation in butterfly valves are (1) and (2).

Thus, when the valve is nearly closed, the flow passes over the upper and lower edges of the disc as shown in figure. 1. The low pressure area can be caused when high flow velocity is created.

Fig. 2 Orifice flow

Figure 2 shows orifice flow corresponding to valve flow. The contracted part is called vena contracta. The relation between pressure and flow rate is shown in figure 3.

When fluids flow at high velocity and pressure drops below the saturated vapour pressure, air bubbles are produced. They are carried away toward the valve downstream side, and then, as surrounding water recovers its original pressure, air bubbles break instantaneously (approx. 1/1000 sec) and produce a strong impact force (200 to 500 atm). If air bubbles break near a substance, the impact applies great stress on both the outside and inside of the substance, and causes damage to the surface.

Fig. 3 Pressure and flow rate relation

Cavitation Generation Process in Butterfly Valves and Formula for Estimation

There are many stages in cavitation generation, as follows.

Flow conditions	Pressure conditions	Explanation
 Fig. 4 Normal flow 	$P_2 > P_v$ $P_{vc} > P_v$	- Normal flow means turbulent flow. - In this stage, valve flow rate increases in proportion to the square root of the differential pressure.
Fig. 5 Cavitation flow 	$P_2 > P_v$ $P_{vc} \leq P_v$	- Cavitation flow has three stages corresponding to the increase in differential pressure. - Incipient cavitation stage - Critical cavitation stage - Full cavitation stage - Noise and oscillation may cause damage to the valve and downstream-side piping.
Fig. 6 Flashing flow 	$P_2 \leq P_v$ $P_{vc} < P_v$	- This occurs when pressure on the valve downstream side drops below the vapour pressure of the liquid. The fluid changes from liquid to gas, bringing rapid velocity change and volume expansion. These two factors are the main causes of a flashing noise. Flashing noise is of lower level than cavitation noise because gas acts as a cushion. - Attention must be paid to materials of the valve body (e.g., upgrading to stainless steel or chromium molybdenum steel) or the type of downstream-side piping.

Data

Cavitation prediction

No cavitation

$$\Delta P < K_c (P_1 - P_v)$$

Incipient cavitation

$$\Delta P = K_c (P_1 - P_v)$$

Critical cavitation

$$FL^2 (P_1 - P_v) > DP > K_c (P_1 - P_v)$$

Full cavitation

$$\Delta P \geq FL^2 (P_1 - P_v)$$

Flashing

$$P_2 < P_v$$

$$FL^2 (P_1 - P_v) > \Delta P$$

ΔP : Pressure difference across valve [$P_1 - P_2$] (kPa)

K_c : Cavitation coefficient

P_1 : Valve-inlet pressure (kPaA)

P_2 : Valve-outlet pressure (kPaA)

P_v : Vapour pressure of liquid (kPaA)

FL : Pressure recovery coefficient

Cavitation level and availability

Type of valve	Rubber seated (700G, 702Z)	Double offset PTFE metal (302A, 304A)	507V 508V
Cavitation level		731P	
No cavitation	○	○	○
Incipient cavitation	○	○	○
Critical cavitation	△	○	○
Full cavitation	×	×	△ (Countermeasure is necessary)
Flashing	×	×	△ (Countermeasure is necessary)

○ — Suitable
△ — Consult us regarding usage.
× — Unsuitable

Note:
Normal operation material is stainless steel except when critical cavitation is determined.

Cavitation reduction treatment

The following are the main methods for reducing or preventing cavitation damage to control valves.

- (1) Install valves in series and control them. This method is for reducing the pressure load on each valve. In this case, space valves out at least 4D (4 times the pipe diameter). The total K_c or FL will be improved. In order to avoid full cavitation FL should satisfy the following condition:

$$FL > \sqrt{\frac{P_1 - P_2}{P_1 - P_v}}$$

In this case, however, valve control balance may be difficult.

Example:

When 507V and 508V types are nearly fully opened, FL is 0.72. When 507V and 508V types are installed in series, the combined FL is $0.72 = 0.84$ and the permissible pressure difference across the valve is increased by 36%. However, both valves should be operated under exactly the same conditions.

- (2) Use a resistance plate (perforated orifice for pressure reduction) at the same time. If the flow rate fluctuates heavily, a good result cannot be expected.
- (3) Use a valve with higher K_c or FL .
- (4) Lower the installation position of the valve; that is, lower the secondary pressure. However, this method is hard to adopt in existing piping installations.
- (5) Rectify the turbulent flow by using a rectifier grid.

Cavitation coefficient K_c and pressure recovery coefficient F_L

Concentric type butterfly valve 700 and 800 series

High performance butterfly valve 300 series

Rotary control valve 507V and 508V types

Unit Conversion

Cavitation prediction

Conversion from flow rate unit for each type to m³/h

	m ³ /h	Gas m ³ /h (at 15°C 101kPa)
Gas m ³ /h	—	× [A]
Gas m ³ /h (at 15°C 101kPa)	× [B]	—
kg/h (at 0°C 101kPa)	÷ SG × 0.001	× 23.63 ÷ MW
kℓ/h	—	× [A]
t/h (at 0°C 101kPa)	÷ SG	× 1000 × 23.63 ÷ MW
ℓ/h	× 0.001	÷ 0.001 × [A]
ℓ/min.	× 0.06	× 0.06 × [A]
t/min. (at 0°C 101kPa)	÷ SG × 60	× 60 × 1000 × 23.63 ÷ MW
Lb/h (at 0°C 101kPa)	× 0.4536 ÷ SG × 0.001	× 0.4536 × 23.63 ÷ MW
CFH (ft ³ /h)	× 0.02832	× 0.02832 × [A]
SCFH (Nft ³ /h)	× 0.02832 × [B]	× 0.02832
BBL/h (barrel)	× 0.159	× 0.159 × [A]
BBL/min.	× 0.159 × 60	× 0.159 × 60 × [A]
GPM (gallon/min.)	× 0.2271	× 0.2271 × [A]
CFM (ft ³ /min.)	× 1.699	× 1.699 × [A]
SCFM	× 1.699 × [B]	× 1.699
Nm ³ /h (at 0°C 101kPa)	× T _i × 0.1013 ÷ (P _i × 273)	× 288 ÷ 273

[A] = P_i × 288 ÷ (T_i × 0.1013) P_i = Valve inlet pressure (MPaA)

[B] = T_i × 0.1013 ÷ (P_i × 288) T_i = Temperature (°K)

SG = Specific gravity MW = Molecular weight

Pressure unit conversion

Conversion from pressure unit for each type to MPaA

	MPa A
kgf/cm ² G	× 9.807 × 10 ⁻² + 0.1013
Bar G	× 1 × 10 ⁻¹ + 0.1013
