

FLANGED BALL VALVES ASME CLASS 150 & 300

REDUCED BORE:

1/2" – 20" (DN 15 – 500) SERIES 7000

The Jamesbury® polymer-seated flanged ball valves provide industry leading performance and reliability. Offered in a wide variety of materials to suit an extensive range of applications these valves are designed and manufactured with all our latest technology and expertise.

Unique Sealing

The superior performance of *Jamesbury* ball valves is achieved by the unique design of the seats. The flexible lip seats exert continuous sealing pressure on the ball and automatically compensate for wear and changes in pressure and temperature, yielding positive bi-directional zero-leak shut-off. The stem seal sealing system ensures minimum emissions.

Materials

Standard products are available with carbon steel body and stainless steel trim or all stainless steel construction. Special body and trim materials such as Alloy 20, Hastelloy® C, and others are available upon request. For applications involving chemicals, acids, caustics, and steam we recommend our Xtreme® seat material, which provides superior lifecycle and sealing performance compared to virgin or filled PTFE. We can accommodate nearly any special customer or application specific requirement.

Fite-Tite® Valves

All *Jamesbury Fire-Tite* flanged ball valves are qualified to API 607 and ISO 10497. This ensures minimal leakage in the event of a fire.

CE marked

CE marked and documented product conforming to the European Pressure Equipment Directive (PED) 2014/68/EU and ATEX Directive 2014/34/EU is available as standard product.

Features And Benefits

- ❑ Robust engineering design yields leading cycle life
- ❑ Outstanding quality provides confidence
- ❑ Flexible lip seat provides bi-directional zero-leak shut-off and minimum maintenance
- ❑ Xtreme seats provide longer life and expanded pressure-temperature capability
- ❑ Patented stem seal system engineered to provide superior emissions performance (1/2" - 2")
- ❑ Live loaded stem packing enhances emissions performance and reduces maintenance (1/2" - 8")
- ❑ ISO 5211 bonnet mounting design (1/2" - 8")
- ❑ API 607 qualified
- ❑ API 608 compliance & grounding as standard (3" - 8")
- ❑ ISO 15848-1 Class BH rated (1/2" - 8")
- ❑ Standard materials meet requirements of NACE MR0103 and MR0175 (see p32 & 33)
- ❑ SIL 3 qualified

Emission-Pak® Valves

Jamesbury Emission-Pak products feature a double stem seal packing system to provide additional sealing performance for critical services. This feature is ISO 15848-1 Class AH rated.

Automated Assemblies

Valves, actuators, and accessories designed to mate together with precision ensures superior performance.

SPECIFICATIONS

Flow Data

The table at right provides flow coefficients for *Jamesbury* valves covered in this bulletin. C_v values represent the flow of water at +60°F through the valve in U.S. gallons per minute at a pressure drop of 1 psi. The metric equivalent, K_v , is the flow of water at +16°C through the valve in cubic meters per hour at a pressure drop of 1 kg/cm². To convert C_v to K_v , multiply by 0.8569.

Valve Body Ratings

These are the maximum working pressure ratings of the valve body only. The seat ratings, shown on the next page, determine the practical temperature and pressure limitations according to actual service conditions. Test pressures are recommended pressures for hydrostatic test with ball half open.

Valve Seat Ratings

Seat ratings, indicated by solid lines in the charts on the next page, are based on differential pressure with the valve ball in the fully closed position and refer to seats only. The dotted lines indicate maximum working pressures for *WCB carbon steel* valve bodies. (Maximum working pressures of other body materials are shown in the tables above.) The combination of dotted and solid lines indicates the maximum valve rating at specific pressure and temperature conditions. Valves with PTFE, *Xtreme*, PEEK®, PFA, and UHMW polyethylene seats can be used in service to -60°F (-51°C) provided that the valve body material is suitable for such a temperature. Carbon steel valves are rated to -20°F (-29°C).

For saturated steam service, stainless steel trim is recommended at all pressures and is required above 200 psi (14 bar). See Bulletin B150-1. For more application information on seat materials, refer to Bulletin T140-1.

Xtreme Performance and Value

Xtreme seats provide longer life, expanded performance boundaries, and the greatest possible value. *Xtreme* material is unique, resulting from a technological breakthrough in our polymer research lab. The material is a proprietary fluoropolymer based blend that provides superior quarter-turn performance.

* Screw-thread dimensions are in inches.

** Holes in the body cap are threaded: 8" (DN 200) 730S (7/8-9 x 1.25 deep), 10" (DN 250) 7150 (7/8-9 x 1.13 deep), 10" (DN 250) 730S (1-8 x 1.38 deep)

1 The ball only protrudes from the flange face (in the closed position) on the 10" (DN 250) 7150 and 10" (DN 250) 730S. This is because they have the same F-F dimension and the same ball. Each of these also has the special insert with tapped pipe flange bolt holes.

VALVE TORQUE DATA

Use these torque charts as a guide for actuator selection. Additional requirements may be imposed by media characteristics, trim, and frequency of valve operation. For clean lubricating fluid service, required torque for PTFE (T), Xtreme (X) and filled PTFE (M) seated valves only may be reduced 20% when the valve is equipped with corrosion resistant trim. For difficult services such as slurries and semi-solids, and for oxygen, increase values by 50%. If in doubt, err on the side of safety by using a larger actuator than would normally be selected.

Torque output values and actuator selection tables for the different types of *Jamesbury* actuators are contained in the bulletins listed below.

EMISSION-PAK SERIES 7000 BALL VALVES

The *Emission-Pak* provides additional protection from emissions and stem seal leakage, and the ability to monitor leakage for critical applications.

The *Emission-Pak* is an extended stem retainer containing two sets of stem seals which is mounted in the valve body. A special TFM and graphite gasket maintains a leak-free joint and assures that a *Fire-Tite* valve retains its fire tested rating.

AVAILABLE CONFIGURATIONS

Standard Bore Valves		
Valve	Size Range	ANSI Class
7150, 7180	1/2" – 8" (DN 15 – 200)	150
730S	1/2" – 6" (DN 15 – 150)	300
7300, 7380	1/2" – 6" (DN 15 – 150)	300

FEATURES

- ❑ Two separate live loaded v-ring stem seals
- ❑ One piece stem
- ❑ Two thrust bearings
- ❑ Optional stem seal monitoring port permits detection of primary stem seal wear or leakage
- ❑ ISO 15848-1 Class AH rated

Qualification Test

Emission-Pak 1/2" – 2" (DN 15 – 50) 7000 series are qualified to ISO 15848-1 AH-CC3-SSA1-T200.

Note 1: 17-4 PH stems required with PEEK seats

3" - 8" (DN 80 - 200) Series 7150 valves with *Emission-Pak*
3" - 6" (DN 80 - 150) Series 7300 & 730S valves with *Emission-Pak*

Bonnet accepts standard handle kit, accessories and actuators

Lockable Handle as Standard

Double packed and live loaded stem seals provide consistent packing force, resists thermal and pressure transients and extends valve life

Optional monitoring port that allows padding of the lantern area or instrumentation to detect migrating liquids of gases

TFM / graphite body seal and gasket provides superior bonnet to stem retainer interface and sealing performance to API-607 and ISO 15848-1

Qualification Test

3" – 8" (DN 80 – 200) 7150, 3" - 6" (DN 80 - 150) 7300 and 730S, series with *Emission-Pak* are qualified to ISO 15848-1 AH CO3-SSA3 T(200°C).

EMISSION-PAK VALVE TORQUE DATA

Use these torque charts as a guide for actuator selection. Additional requirements may be imposed by media characteristics, trim, and frequency of valve operation. For clean lubricating fluid service, required torque for PTFE (T) and Xtreme (X) seated valves only may be reduced 20% when the valve is equipped with corrosion resistant trim. For difficult services such as slurries and semi-solids, and for oxygen, increase values by 50%. If in doubt, err on the side of safety by using a larger actuator than would normally be selected.

Torque output values and actuator selection tables for the different types of *Jamesbury* actuators are contained in the bulletins listed below.

ACCESSORIES

Locking Devices

When safety measures are necessary, a reliable locking feature is standard to allow the valve to be padlocked in either the open or closed position.

Bonnet/Stem Extensions SE-096, 097 & 098

4" (102 mm) bonnet/stem extensions are available and are particularly useful for automated and manual products. Extensions can also be used to prevent interference between actuators and companion pipelines and equipment. They are ideal as extension that require locking lever or locking oval handle capability. Stainless steel construction is also available.

Stem Extensions

4" (102 mm) non-lockable stem extensions are available for manual valves. Extensions can also be used to prevent interference between companion pipelines and equipment. Compatible with all handle options. Stainless steel construction is also available.

Round Handles

Series 7000 ball valves (1/2"-2") have optional round handles (non-lockable) available. To order handles separately, specify the part number shown in the accessories table below.

Oval handles with slide-lock

Optional oval handle (1/2" - 2") saves space and may be padlocked to retain the valve in the open or closed position. To order handles separately, specify the part number shown in the accessories table below.

Cavity Fillers

Cavity fillers are available in non Trunnion 7000 series standard bore valves. The fillers are PTFE or Xtreme and used for sanitary applications and in processes where cross contamination is a concern. Food processing, pharma-chemicals, cosmetics, paints, solvents, finishes and dyes are typical applications where fillers are employed.

WARNING:

As the use of the valve is application specific, a number of factors should be taken into account when selecting a valve for a given application. Therefore, some of the situations in which the valves are used are outside the scope of this manual. If you have any questions concerning the use, application or compatibility of the valve with the intended service, contact Metso for more information.

HOW TO ORDER

EXAMPLE: A 2" ASME Class 300 short design valve (730S) in *Fire-Tite* design with raised-face flanges (31), carbon steel body (22), and 316 stainless steel trim (36), with *Xtreme* seats (XTZ) and molecularly enhanced PTFE stem seals is written: 2" 730S-31-2236XTZ1.
