Catalog No. BE302-04

NDV BALL VALVES

NIPPON DAIYA VALVE Co., Ltd.

1. 2-Way Ball Valve

Fire Safe Type Ball Valve: F100NB High Pressure / Large Bore Ball Valve: E(K)100S Jacketed Ball Valve: E100JNC Extension Stem Ball Valve: FEX100NB

2. 3-Way Ball Valve

- 2 Seats 3-Way Ball Valve: E300NB-L2
- 4 Seats 3-Way Ball Valve: E300NB-T4/L4
- 3 Seats 3-Way Ball Valve: E300N-T3/L3

3. V-Port Valve

V100ND(NC)

4. Pneumatically Operated Valve

Pneumatically Operated 2-Way Ball Valve Pneumatically Operated 3-Way Ball Valve Pneumatically Operated V-Port Valve

5. Electrically Operated Valve

Electrically Operated 2-Way Ball Valve Electrically Operated 3-Way Ball Valve Electrically Operated V-Port Valve

6. Special Purpose Ball Valve

High Temperature Ball Valve Y-Shaped 3-Way Ball Valve Ball Valve for Shield Tunneling Method Top Entry Ball Valve

7. Safety Instructions

- 4-3. Pneumatically Operated V-Port Valve: VPN(PO,PC)1100ND(NC)
- 4-4. References for Pneumatically Operated Valve

Torque Actuator: 04DN to 12DN

Structure and Features

- 1 Compact and light weight with double pistons type.
- 2 Environment-concious type paint is used.
- 3 Sealing capability has improved by increasing the number of O-Ring at upper and lower position of drive shaft from 1 to 2 each.
- 4 Air inlet connection conforms to NAMUR standard(*).
 - *: The code VDI/VDE3845-2010 for the size of the attachments of actuators

Specification

	Double Acting: PN (Air to Open / Air to Close)		
Operation Type	Single Acting: Reverse Acting PO (Air to Open / Spring to Close)		
	Direct Acting PC (Air to Close / Spring to Open)		
Operating Pressure	0.4 to 0.7MPa (Option: 0.3MPa)		
	Cylinder: ADC12 (Aluminum Die-cast)		
Materials	Spring Cover: ADC12		
	Drive Shaft: SCM435		
Ambient Temperature	-10 to 50°C *except frozen condition (Please consult with NDV if the ambient temperature is more than 50°C)		
Rotation Angle	Partial turn 0 to 90°		
Manual Operation	Manual operating device is installable. *In case of double acting, lever operation is possible by installing by-pass at		
	air chambers or by atmospheric discharge.		
Air Inlet Connection	Rc1/4 (Solenoid valve connection: NAMUR Standard)		
Painting for Actuator	Platinum Silver (conforming to RoHS)		
Lubricant Oil	Shell Arbania EP2 grease (conforming to RoHS)		
Durability	More than 100,000 times (with load) *not guaranteed value

Torque Actuator for Large Bore: 13D to 25D

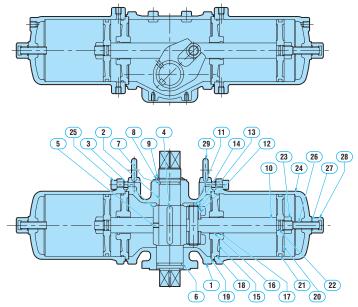

Structure and Features

Double Cylinder 90° Rotation Piston type Actuator with Scotch York.

	Double Acting: PN (Air to Open / Air to Close)
Operation Type	Single Acting: Reverse Acting PO (Air to Open / Spring to Close)
	Direct Acting PC (Air to Close / Spring to Open)
Operating Pressure	0.4 to 0.7MPa (Option: 0.3MPa)
Ambient	-10 to 50°C *except frozen condition (Please consult with NDV if the
Temperature	ambient temperature is more than 50°C)
Rotation Angle	Part turn 0 to 90°
Manual Operation	Manual operating device is installable.
Painting for Actuator	Silver (conforming to RoHS)

3-Way Ball Valve

Special Purpose Ball Valve

Selection of Actuator

Selection by Operating Condition

A required torque to operate a valve is different by the fluid condition, the fluid temperature, the seat material or the shutoff differential pressure even if the valve diameter is the same. Therefore, an appropriate actuator must be selected considering conditions to affect the valve torque.

Valve Type: F100NB, E100JNC, E300NB, E300N

	Condition	Factor
	NTF	а
Seat Material	NCF	b
	NGR	С
	Clean (less than 100cP)	а
Fluid State	Solvent, Viscous (100 to 500cP)	b
Fluid State	Sludge, Contamination (Slurry, Iron Powder),	
	Powder, High Viscous Fluid	С
Eluid Tomp	-20 to 150°C	а
Fluid Temp.	-100 to -21°C, 151 to 200°C	b

Combination of Factor	Rank
3a	А
2a+b, a+2b	В
2a+c, 2b+c, a+b+c, 3b, 2c+a, 2c+b	С

Valve Type: V100ND (NC)

		Selection (Note 2)							
Category	Used Condition (Note 1)	Seat	Oper	ation	Rank				
		Jeal	ON-OFF	Control	папк				
1	Clean Fluid	CF	O	\bigtriangleup	А				
1		М	0	\bigcirc	В

Safety Instructions

Safety Instructions

1. Selection of Valves

- Usable ranges for products described on this brochure are limited according to the domestic/international code and standard and NDV standard. Appropriate products must be selected after confirming the usage conditions (fluid, pressure, temperature etc.).
- 2 Materials for the main parts of valves must be selected properly considering working conditions (fluid, temperature etc.).
- **3** Please specify degrease or water proof when issuing order. (Some of the products may not be applicable for degrease or water proof.)
- Soft seat floating ball valve must be used at full open/close position. Usage at intermediate position may cause damages of the surface of ball and/or seat.
- 6 Because of the structure of ball valve, abnormal pressure rise at pocket (*) occurs if the fluid is liquid and the temperature fluctuates. Ball top is provided with a hole to prevent this abnormal pressure rise. The alternative countermeasure should be taken incase the abnormal pressure rise happens by temperature rise at the pocket during valve full closing. Please consult with NDV or local representative if the case occurs.

During valve full OPEN: Space between ball and shell During valve full CLOSE: Space between ball and shell, Ball bore portion

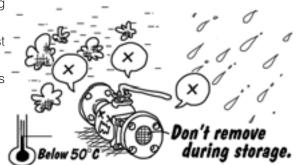

- **6** Floating ball valve has a mechanism to seal by pushing ball against the seat of the outlet side with fluid pressure. Please consult with NDV or local representative in case that the pressure change is large in operation condition because seat leakage may occur at low pressure operation.
- **?** Please consult with NDV or local representative in case that fluid includes abrasive matter because an abrasion may occur at seat, body or other parts of valve.

2. Receipt and Carriage

- Wrapping and packing conditions, products condition and number of goods must be checked and confirmed at the time of the receipt.
- 2 Delivered goods may be heavy depending on the bore size. Unloading and carriage must be done using proper machines and tools according to the relevant law for safety and health. Do not go under lifted goods, do not insert hand or leg below goods and do not operate lifting machine under the lifted goods.
- **3** If packing is by corrugated board, the packing strength will become low when wetted. Handling must be carefully done if the corrugated board is wet.

3. Storage

- It is recommended to store products under packing condition until installing them to piping.
- If products are stored for some time after unpacking, dust proof seal (cap) at flange face must not be removed.
- 3 Products must be stored under below mentioned conditions in order to avoid rust and/or degradation of materials.
 - 1. To protect from rain or water
 - Ambient temperature must be below 50°C (The temperature might be different by installed accessories.)
 - 3. To avoid high humidity and dust atmosphere

Ball Valve

3-Way

Special Purpose Ball Valve

Special Purpose Ball Valve

4. Installation to Piping

- Remove dust proof seal (cap) at connection flange face and confirm that there are no dusts and/or deposits inside. Confirm also that there are no foreign materials inside of the piping after cleaning. Blow off by air or flush by fluid if necessary.
- 2 Ball valves have not a restriction for the flow direction. Install valves to piping considering the position of operation handle and the other necessary issues for safety operation. If flow direction is marked on the valve for some reason such as a protection of abnormal pressure rise, install as directed by the mark.
- 3 Keep a space for overhauling. The space needs necessary area for lifting a complete set of the valve.
- 4 Valves are delivered at full open position unless otherwise specified. Install valves keeping full open position.
- Install valves avoiding strong tension, compression or bending stress to the valves.
- **6** When installing valves, bolts for installation must be tightened diagonally and equally. Unbalanced tightening may cause leakages from connection flanges.
- Confirm that tightening bolts and nuts are not loosened. Retighten them if loosened.
- 8 After installing valves, blowing off by air or flushing by fluid at full open valve condition must be done to clean foreign materials in piping. (Do not close and open valve during blowing off or flushing.)

4 (1) Diagonally 2 3

5. Operation

- Do not operate valve with excessive torque by attaching a pipe or a wrench to the lever handle for opening or closing.
- 2 Never put fingers or hands into the inside of valve.
- 3 If there is any leakage from the gland, tighten further the gland bolt. If valve is used for fluid of large temperature change, degree of stress relief of packing is large and therefore, retightening must be done after the temperature once becomes high and falls to low.
- 4 Products may be damaged if remaining fluid in the valve is frozen. If there is a possibility of frozen, heat piping line or clean the inside of valves.

6. Pneumatical and Electrical Actuator

- Air vent and electric wiring terminal are fitted with seals. Do not remove the seals until installation to the connections.
- 2 Actuators are delivered after adjustment. Do not disassemble or readjustment. Call NDV or local representative, if some adjustment seems necessary.
- **3** Use air dehumidified and cleaned by filtration.
- Operating pressure and power source must be confirmed by the plate attached to the valve and/or the specification.
- **5** Take care that rain or water will not enter from air hole of the actuator.

7. Disassembling and assembling

Before remove a valve from piping, discharge the fluid in the piping and relieve the pressure. In this occasion, the valve must be opened and closed several times to relieve the pressure in the valve. Special attention must be given if the fluid is hazardous like poisonous or abrasive fluid.

2 Be careful not to damage the seal part of ball surface and flange face during disassembling and assembling.

Мето

Specifications and performance figures of products contained in this catalog are on the design calculations, in-house tests, actual records of product application, and the official standards and specifications. They are presented as the user guide on the use of product concerned under general service conditions. Users intending to use the product under a special condition are required to receive engineering advice from this company in advance or to make their own studies and evaluation to verify performance on their own responsibility. This company shall not be liable for any damages, material or human, that may arise without following this procedure. In as much as full care was taken in editing this catalog, users are kindly requested to make contact with this company for any questions or discrepancies found. This catalog is subject to change without notice for the purpose of correcting error, supplementing or improving insufficient content, updating the content to the improved product performance, design change, discontinuation of product and other reasons. Revised version automatically invalidates catalogs issued prior to the current version. Check the version with our Sales Dept. or local representative before you place orders.

There are several points to be noticed for the use of ball valve based on the structural characteristics. When valve is delivered, a leaflet for Safety Instructions is in the package. Please read this instruction thoroughly before handling and use of products in order to use them safely and stably for a long time.
