INTRODUCTION OF PRODUCTS

Weir Type Diaphragm Valve (Basic type: Type 400)

Manually Operated Diaphragm Valve: Type 400

Nominal Size(DN) : 15 - 300

Pneumatically Operated ON-OFF Diaphragm Valve: Type PO(PC, PN) 1400N

Pneumatically Operated ON-OFF Diaphragm Valve: Type HO(HC, HN) 1400N

Nominal Size (DN):15-150

PO...Reverse Acting(Air to Open)

PC...Direct Acting(Air to Close)

PN...Double Acting

Nominal Size (DN):100-300

HO...Reverse Acting(Air to Open)

HC...Direct Acting(Air to Close)

HN...Double Acting

●Large and high output type

Pneumatically Operated Flow Control Diaphragm Valve (1): Type 3400 [Rolling diaphragm type]

Pneumatically Operated Flow Control Diaphragm Valve (2): Type HN3400N [Cylinder type]

Nominal Size (DN):15-150

BO...Reverse Acting(Air to Open)

BC...Direct Acting(Air to Close)

Nominal Size (DN):150-300

HN...Double Acting

●Large and high output type

Electrically Operated Diaphragm Valve (1): Type MS4400

Electrically Operated Diaphragm Valve (2): Type NR4400

Nominal Size (DN): 25 - 300

Nominal Size (DN): 15 - 80

Photos in this catalog represent images of valves. Actual appearance may differ by specifications.

OVERVIEW OF DIAPHRAGM VALVES

① Basic Structure and Mechanism of Diaphragm Valves

- Diaphragm valve generally refers to a valve having a diaphragm of rubber or other flexible material that opens or closes the fluid passage.
- The following diagram shows the basic structure of diaphragm valve that consists of three units, actuator, diaphragm and the body. The valve controls the liquid flow by pressing or depressing the diaphragm to or from the sealing surface on the inside of the body.
- Diaphragm valves are roughly categorized to two types; Weir type (Type 400) and Straight type (Type 500), but both types share the same basic structure.

Basic unit structure

Manually operated diaphragm valve
(fluorine resin-lined)

Actuator

Mainly categorized into the manually operated type, pneumatically operated type, flow control type(*) and electrically operated type.

Diaphragm

Rubber, fluorine resin(*) and other material are available according to application(**).

Body

Metal with or without lining is available in rich selection for a body. Connection method available includes welded type and screw type in addition to the flange type(**).

(*) For weir type diaphragm valve only.

(**) For details, see p.10 and p.15

Weir type diaphragm valve: Type 400

- Basic structure of diaphragm valve having a weir at the fluid passage. The diaphragm and weir of the body are tightly closed for airtightness to achieve high valve seat sealing performance.
- Rich selection is available for the main body and diaphragm material to apply to a wide scope of fluid.
- Used for : Chemical, environment and water treatment, iron and steel, shipbuilding, medical, food, semiconductor, power generation, etc.

Straight type diaphragm valve: Type 500

- The fluid passage is straight, which minimizes pressure drop and/or fluid accumulation.
- Applicable to viscose fluid, cellulose fluid, slurry, sledge and other fluids containing suspended solids.
- Used for : Water purifying plants, terminal treatment plant, etc.

② Features of Diaphragm Valves

① Superb airtightness

- Actuator is isolated by the diaphragm. This prevents fluid leakage to outside or contamination of fluid by outside air.

② Zero leak from valve seat

- Controlled by flexible diaphragm, no fluid leaks from the valve seat.
- In the case of rubber diaphragm, complete closing is available, even if some foreign matters are bitten into diaphragm due to its flexibility.

③ Superb corrosion and chemical resistance

- Simple body shape is suitable for the lining process.
- Combination of rich selection of diaphragm material and various lining bodies such as rubber and fluorine resin allows manufacture of valves applicable to a wide span of fluid specifications, which is more efficient costwise than special alloy combination.

④ Good self-purifying performance

- Streamlined fluid passage without pockets provides self-purifying performance by minimizing fluid retention.

⑤ Superb maintainability

- Simple design of three parts. Actuator, Diaphragm and the Body makes it easy to disassemble/assemble the valve.
- Top entry structure adopted enables to change diaphragm by simply removing the nuts and bolts that joint the main body and the bonnet without disconnecting the valve from the piping.
- Each unit is interchangeable, enabling a system change with ease from manual to automatic operation.

⑥ Environment-friendly types

- Simple 3-unit construction of the Actuator, Diaphragm and the Body requires less number of parts than other valve types, saving consumable parts.

Environment-friendly type paint and lubricant free from hazardous heavy metal are used. (RoHS compliance)

Actuator for the pneumatically operated diaphragm valve is improved to have much higher durability, extending the replacement cycle for expendable parts.

Chloroprene diaphragm is lead-free.

Improved actuator for the pneumatically operated diaphragm valve has reduced air consumption. (Approx. 20% in average from the conventional products of ours.)

Solenoid valve to the pneumatically operated actuator can be installed directly without pneumatic piping, thus reducing material usage.

Type POM1400N

PTFE/EPDM+ α *	PTFE/EPDM+ α *	TF/CX	125-200	-20 to 151°C

*EPDM+ α has been developed by our company to improve heat resistance of EPDM.

Optional:

- Fluoro rubber cushion rubber
- Hastelloy diaphragm fixing bayonet pin

- The applicable temperature differs by the body material, fluid specifications (composition and pressure), opening/closing frequency and nominal size. In addition, vacuum specification is limited by the type of diaphragm and the nominal size because of the relationship between the degree of vacuum and the temperature. For further details, contact our Sales Dept. or local representative.
- This catalog lists the standard range of manufacture. For any material, nominal size and connection standards required other than listed here, please contact our Sales Dept. or local representative.

For the detail of material selection, see the material selection list on p.48.

1. Weir Type Diaphragm Valve: Type 400

3 Actuator specifications

● Type 400: Standard manual handwheel

- Standard construction material: DN15 - 100

Part No.	Name	Material	Quantity	Applicable nominal Size DN
2	Diaphragm	(As per your specification)	1	
4	Bonnet	ADC12 (1) FCD450	1	15-50 65-100
4A	Stem bush	C3604	1	15-50
5	Bolt	SWCH	4SET	15-80
	Nut	SWRM	8SET	100
6	Compressor	ADC12 (2)	1	
7	Spindle	SUS403	1	
9	Handwheel	ADC12 FCD450	1 1	15-65 80-100
10	Stop pin	S20C	1	
19	Thrust washer	SPCC+Polyacetal	1	

(1) : Also available in FCD
(2) : Also available in SCS13

Compared with FC200 and SCS13, ADC12 (aluminum die casting) is corroded in a short period of time by caustic soda and other alkaline chemicals, hydrochloric acid, sulfuric acid and other inorganic acids and chlorine gasses. Especially do not use for bromine.

4 Optional

● Type S400: With an opening indicator

- Valve opening can be checked with the scale.

Fully open

Fully closed

● Type L400: With a lock nut

- The valve opening can be set to the full opening, full closing or intermediate opening and the spindle can be fixed with the lock nut.

● Type M400: With a limit switch

- Commercially-supplied limit switch may be mounted.

Type M400NB: Closed only

(Opening-closing type also available. Please inquire.)

● Type QL400NB: With quick opening-closing lever handle

- A 90-degree lever handle operation makes opening/closing much easier compared with the conventional handwheel type.
- The 90-degree operation allows to see exact valve opening state from distance by the position of the lever handle.
- Constant torque application during the opening and closing of the valve allows any operator stable closing performance.
- Prevents overtightening when closing the valve. Gives no excessive load to the diaphragm to ensure longer life.

Fully open

Fully closed

5 Principal dimension list

● Flange type ① : Type 400

DN15-100

DN125-300

Unit:mm

Nominal Size (DN)	Diameter d		Face-to-face length L		Handwheel diameter W	Height H, approx.	Lining rubber thickness T	Mass approx.(kg)
	Other than rubber/resin-lined	Rubber/resin-lined	Other than rubber/resin-lined	Rubber/resin-lined				
15	13	15	102	107	63	115	3	2.0
20	19		118	123	63	125	3	2.3
25	25		127	132	80	129	3	3.5
40	38		159	165	100	155	3	5.4
50	51		191	197	125	172	3	7.2
65	64		216	222	125	209	3	12.5

300	164	2580	—	2090	—	—	—	190	6060	4880

* The Cv values of Material code "59(2S)" with DN65 or bigger are same as "59(M)/59(S)".

② Maximum Working Pressure and Inspection Pressure

- The maximum working pressure is determined by the combination of diaphragm (rubber/PTFE) and the main body material.
(The following table outlines the values for fluids of ordinary temperature. The max. working pressure is reduced as the fluid composition changes or the fluid temperature rises.)
- Only weir type can be used under the vacuum environment with condition, please inquire separately.
- Water pressure in (Parentheses) represent inspection pressure. In case inspection pressure is over 0.6MPa, inspection medium is N2 and in case the inspection pressure is 0.6MPa or less, inspection medium is Air.

Unit: Mpa

Valve type Nominal Size DN	Weir type (Type 400)				Straight type (Type 500)
	Diaphragm and body material combination

③ Material selection

● Main body material

For application to chemical solution, select the body material by giving consideration to the composition and the temperature. If the fluid is of frictional type containing powder and/or solids, select wear resistant material, simultaneously giving full consideration to the fluid pressure, flow rate, valve opening and the installation position to the piping since these factors may affect the body material.

● Diaphragm

Similar to the selection of body material, to select material for the diaphragm, it is necessary to consider the frequency of open/close service in repetition in addition to the chemical resistance. You are also requested to check the maximum service pressure as it differs by the combination of the diaphragm and body materials. In the case of a weir type diaphragm valve, avoid the combination of PTFE diaphragm and soft rubber lining (Code Nos.33, 35 and 36).

For the detail of material selection, see the material selection list on p.48.

④ Standard exterior paint color

- Rust resistant coating (Gray) without top coating

2

PNEUMATICALLY OPERATED TYPE ON-OFF DIAPHRAGM VALVE

2-1. Pneumatically Operated ON-OFF Diaphragm Valve Actuator

- ① Features of actuator
- ② Actuator specifications

2-2. Weir Type Diaphragm Valve: Type PO(PC, PN)/HO(HC, HN) 1400N

- ① Actuator selection table
- ② Principal dimensions

2-3. Straight Type Diaphragm Valve: Type PO(PN)/HO(HN) 1500N

- ① Actuator selection table
- ② Principal dimensions

2-4. Reference Material

- ① Air chamber capacity and air consumption
- ② Accessories

① Features of actuator

① Smooth operation and sharp improvement of durability:

- Adoption of wear ring realizes smoother operation and improved durability.
- Adoption of stopper nut prevents the shortening of product life due to an excessive load to the diaphragm when the valve is closed, simultaneously eliminating the need for adjusting the working pressure on the direct and double acting types.

② Lightweight and compact:

- The actuator is more lightweight and compact compared with our conventional products (Type HO1400N series).

③ Economical in actuator selection:

- Two to three types of actuator can be selected per nominal size. Selection of an optimum actuator for the working fluid is available.

④ Adoption of NAMUR connection standard*:

- Adoption of NAMUR dimensions to the solenoid valve mounting seat enables direct installation of the same standard solenoid valve without the mounting plate and pneumatic piping. (In the case of direct or double acting type, the pneumatic piping to the upper cylinder is required by using a spacer.)

*VDI/VDE3845-2010

⑤ Rich selection of ancillary device (see the following page) is easy to install:

- Ancillary device includes manual operating device and opening limit device, etc.
- Ancillary device can be installed without disassembling the actuator by simply removing the cap on the top.
- Special compact limit switch box is expected to save space for the piping.

⑥ Air saving and use of environment-friendly paint :

- Compact actuator saves on air consumption.
- Environment-friendly paint is used.

② Actuator specifications

● Standard specifications

Operation	Reverse acting type (Air to Open/Spring to Close): Type PO1400N, Type PO1500N Direct acting type (Air to Close/Spring to Open) : Type PC1400N Double acting type (Air to Open/Air to Close) : Type PN1400N, Type 1500N
Actuator type	Piston Type (With wear ring)
Operating pressure	0.4 \pm 0.1 MPa, Optional: 0.3 \pm 0.1 MPa
Bonnet material	SCPH2···DN100 or under, Optional: SCS13 FC200···DN125 or over, Optional: SCS13
Cylinder material	ADC12(Aluminum diecast), Optional: Cylinder base SCPH2
Standard exterior painting color	Silver (environment-friendly type)
Nameplate	Seal nameplate reading "Product name/LP/OP/SER No./TAG No." is attached on the exterior surface of the actuator.
Applicable nominal size range	DN15-150

● Ancillary Devices

- Spacer: Required for the explosion-proof type solenoid valve, direct and/or double acting type. Pneumatic piping is required to the upper cylinder in the case of the direct and/or double acting type.
- Optional: Closing limit device, 2-stage open-close device.

● Standard Manufacturing Specification (Type PO1400N-TX)

Remarks : 1.The air intake ports are Rc1/4.
 2.Height of product represents cast iron body for other than rubber-lined and resin-lined, and hard rubber lining body for rubber-lined and resin-lined.
 3.The mass of product is for cast iron body of 10K with flange.

① Air chamber capacity and air consumption

● Air chamber capacity: Type PO(PC/PN) 1400N / PO(PN) 1500N

	Actuator code	A : PO (Lower chamber)	B : PC (Upper chamber) C : PN (Upper chamber)	D : PN (Lower chamber)
Air chamber capacity: l	07	0.1	0.1	0.2
	09	0.2	0.3	0.3
	12/12BC	0.5	0.7	0.7
	16/16BC	1.0	1.1	1.4
	20/20BC	2.2	2.7	3.0
	25/25BC/25ABC	3.1	4.7	5.5

● Air consumption

Cumulative air consumption needed for cylinder operation (one count per round of cylinder operation) can be calculated with the following equation.
[Equation for calculating the air consumption]

where; Q = Air consumption (NI), P = Working pressure (MPa)

A - D = Air chamber capacity (l), N = Number of operation (1 operation = 1 round of operation)

- PO (Reverse acting type): $Q=(10P+1)A \times N$
- PC (Direct acting type): $Q=(10P+1)B \times N$
- PN (Double acting type): $Q=\{(10P+1) \times (C+D)\} \times N$

② Accessories

● Limit switch

		Exclusive limit switch	Commercially-supplied limit switch	
Type		Rainproof type (IP67 comparable)	Rainproof type	Explosion-proof type (Ex de IIC T6)
Type No.		MDN	1LS19-J	1LX7001-J
Rated voltage	AC	5A-125,3A-250V	10A-125,250,480V	5A,250V
	DC	—	0.8A-125V 0.4A-250V	0.8A-125V 0.4A-250V
Connector		G1/2(JIS B 0202)		
Manufacturer		NDV Azbil		

● Exclusive limit switch

Special box with built-in micro switches is attached to the actuator. Compact in size and can be commonly applied to Types PO, PC, PN 1400N.

● Commercially-supplied limit switch

Please designate rainproof type or explosion-proof type. Commercially-supplied limit switch will be installed with an opening indicator installed (to the yoke.) If a limit switch other than our standard switch is required, mounting parts will be specially designed.

(In case of DN20 or less, only 1LS19-J is applicable. In case that other products are required, contact our Sales Dept. or local representative.)

● Solenoid

Type	Rainproof type		Explosion-proof type		Rainproof type		Explosion-proof type

Connection bore	Rc1/4				Rc1/4				
Explosion-proof performance	—		d2G4		—		d2G4,Ex d IIB T4		
Connector	G1/2(JIS B 0202)				G1/2(JIS B 0202)				
Manufacturer	CKD				SMC				

Solenoid for NAMUR standard connection can be directly installed.

● Filter Regulator

Type No.	AW20-02EH-CR-X2127
Connection bore	Rc1/4
Supply pressure	MAX:1.0MPa
Filtration granularity	5 μm
Manufacturer	SMC

Type PN1500N will be standard installed with a regulator (AR20K-02EH-X2156) on the closing side.

Accessories other than stated above can be installed as designated. For the details, contact our Sales Dept. or local representative.

PNEUMATICALLY OPERATED TYPE FLOW CONTROL DIAPHRAGM VALVE

3-1. Rolling Diaphragm Type: Type BO(BC) 3400

- ① Features of actuator
- ② Actuator specification
- ③ Actuator selection table
- ④ Principal dimensions

3-2. Piston Type: Type HN3400N

- ① Features of actuator
- ② Actuator specifications
- ③ Actuator selection table
- ④ Principal dimensions

3-3. Reference Material

- ① How to select valve size
- ② Valve stroke and Cv value
- ③ Specific flow rate characteristics

1 . Rolling Diaphragm Type:Type BO(BC)3400

① Features of Actuator

- ① **Smooth operation**
Due to its rolling operation (rolling movement), the rolling diaphragm restrains wear and friction loss.
- ② **Stable output**
Compared with the piston type, the rolling diaphragm has larger compressed area, realizing excellent response and output precision.
- ③ **Compact and lightweight**
Adoption of multi-spring system realizes compact design and lightweight and high output (closing force). These help expand maximum working pressure.

② Actuator specifications

● Standard specifications

Operation*1	Reverse acting type: Type BO3400 (Air to Open/Spring to Close) Direct acting type: Type BC3400 (Air to Close/Spring to Open)
Actuator system	Rolling diaphragm type
Applicable nominal size	DN15-150
Minimum supply pressure*2	0.14 or 0.3MPa
Bonnet material	FCD450
Cylinder material	SPHE or SS400P
Standard exterior painting color	Silver (Environment-friendly type)
Lubricant	Standard/High temperature: Idemitsu Kosan Daphne molybdenum grease No.2 Low temperature: Idemitsu Kosan Daphne Super Coronex No.1
Machine characteristics*3	Linear characteristics (Relationship between signal pressure and valve opening)

*1 : Double acting type is outside the manufacturing range.

*2 : For detail, see the actuator selection table.

*3 : For the machine with the positioner.

● Positioner

	Our standard type	
Operating system	Pneumatic/Pneumatic	Electric/Pneumatic
Type No.	NPN11	NE11
Manufacturer	NDV	

● Filter Regulator

	Type
For NPN11	XR108-S/MOJ3
For NE11	XR108-S/MOR1

Accessories other than stated above can be installed as designated. For further details, contact our Sales Dept. or local representative.

1. Rolling Diaphragm Type: Type BO(BC)3400

④

Principal Dimensions

● Reverse acting type: Type BO3400

Dimension H (parentheses) is for actuator code 526SLA with handle.

2. Piston Type: Type HN3400N

① Features of Actuator

Control valve equipped with the piston type actuator (double acting type). Realizes high output by using high working pressure compared with the rolling diaphragm type.

② Actuator specifications

● Standard specifications

Action	Double acting type: HN3400N (Air to Open/Air to Close)
Actuator system	Piston type
Applicable range of nominal size	
DN150-300	
Supply air pressure	0.2 to 0.5MPa
Bonnet material	FC200
Cylinder material	FC200
Standard exterior painting color	Silver (Environment-friendly type)
Lubricant	Shell Alvania EP2 grease

* : For the valve with positioner

③ Actuator selection table

● Rubber diaphragm

Working pressure: MPa in the table below

Nominal Size DN	Actuator Code	Rubber diaphragm								
		Max. working pressure for other than glass-lined								
		Fluid pressure (MPa)								
		0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	
150	31		0.2		0.25	0.3		0.4

250	40	635	495	1016
300	40	749	495	1057

3

3. Reference Material

① How to Select Valve Size

Valve size is determined by calculating the valve coefficient of volume (Cv value) from the flow rate of a fluid, fluid pressure, differential pressure, specific gravity, etc. and comparing it with the Cv value in the table of the next section.

Generally, the following Cv value calculation formulas are used except for the special correction items:

	$\Delta P < \frac{P_1}{2}$	$\Delta P \geq \frac{P_1}{2}$
Liquid	$C_v = 11.56 V \sqrt{\frac{G}{(P_1 - P_2)}}$	Same as the left
Gas	$C_v = \frac{Q}{2.93} \sqrt{\frac{G(273+t)}{\Delta P(P_1 + P_2)}}$	$C_v = Q \frac{\sqrt{G(273+t)}}{2.538 P_1}$
Vapor	$C_v = \frac{WK}{0.1391 \sqrt{\Delta P(P_1 + P_2)}}$	$C_v = \frac{WK}{0.1205 P_1}$

V : Flow rate of a fluid m³/h

Q : Flow rate of a gas nm³/h
(at 15.6°C, 101.3 kPa·A)

G : Specific gravity of fluid
for liquid, water = 1
for gas, air: 1

P1: Absolute pressure on the primary side kPa·A*

P2: Absolute pressure on the secondary side kPa·A*

t : Temperature of the fluid °C

W: Flow rate of vapor kg/h

K: 1+(0.0013 x degree of superheat °C)

Degree of superheat:

Difference between the saturation temperature to the absolute pressure on the primary side(P1) and the primary side temperature. In the case of saturation vapor, the degree of superheat reads 0 (zero).

(*A : Absolute pressure = Gauge pressure + 101.3 kPa)

② Valve Stroke and Cv value

● Rolling diaphragm type: Type BO(BC)3400

Nominal Size DN	Stroke (mm)	Main body Diaphragm		Without lining		Rubber-lined	Glass-lined	PFA-lined	PFA-lined ETFE-lined	Ceramic
		Rubber	PTFE	Rubber	PTFE	PTFE	PTFE	59(M)/59(S) PTFE	59(2S)/60 PTFE	PTFE
15	6	4		4.2	4.2	2.3	3	5.9		
20	8	10		8.5	11	7.5	7	10		
25	10	23	15	15	19	10		14		
40	14	46	32	30	40	25		28		
50	20	78	71	57	82	41	54	52		
65	24	106	78	93	99	62	68	63		
80	30	161	166	156	219	104	107	128		
100	40	303	306	194	291	210	161	—		
125	50	355		310	405	230	—	—		
150	60	530		440	585	330	—	—		

* The Cv values of Material code "59(2S)" with DN65 or bigger are same as "59(M)/59(S)".

* The above-mentioned Cv values need to be corrected when using the PTFE diaphragm and the pressure on the primary side is lower than 0.15 MPa. In such a case, please contact us.

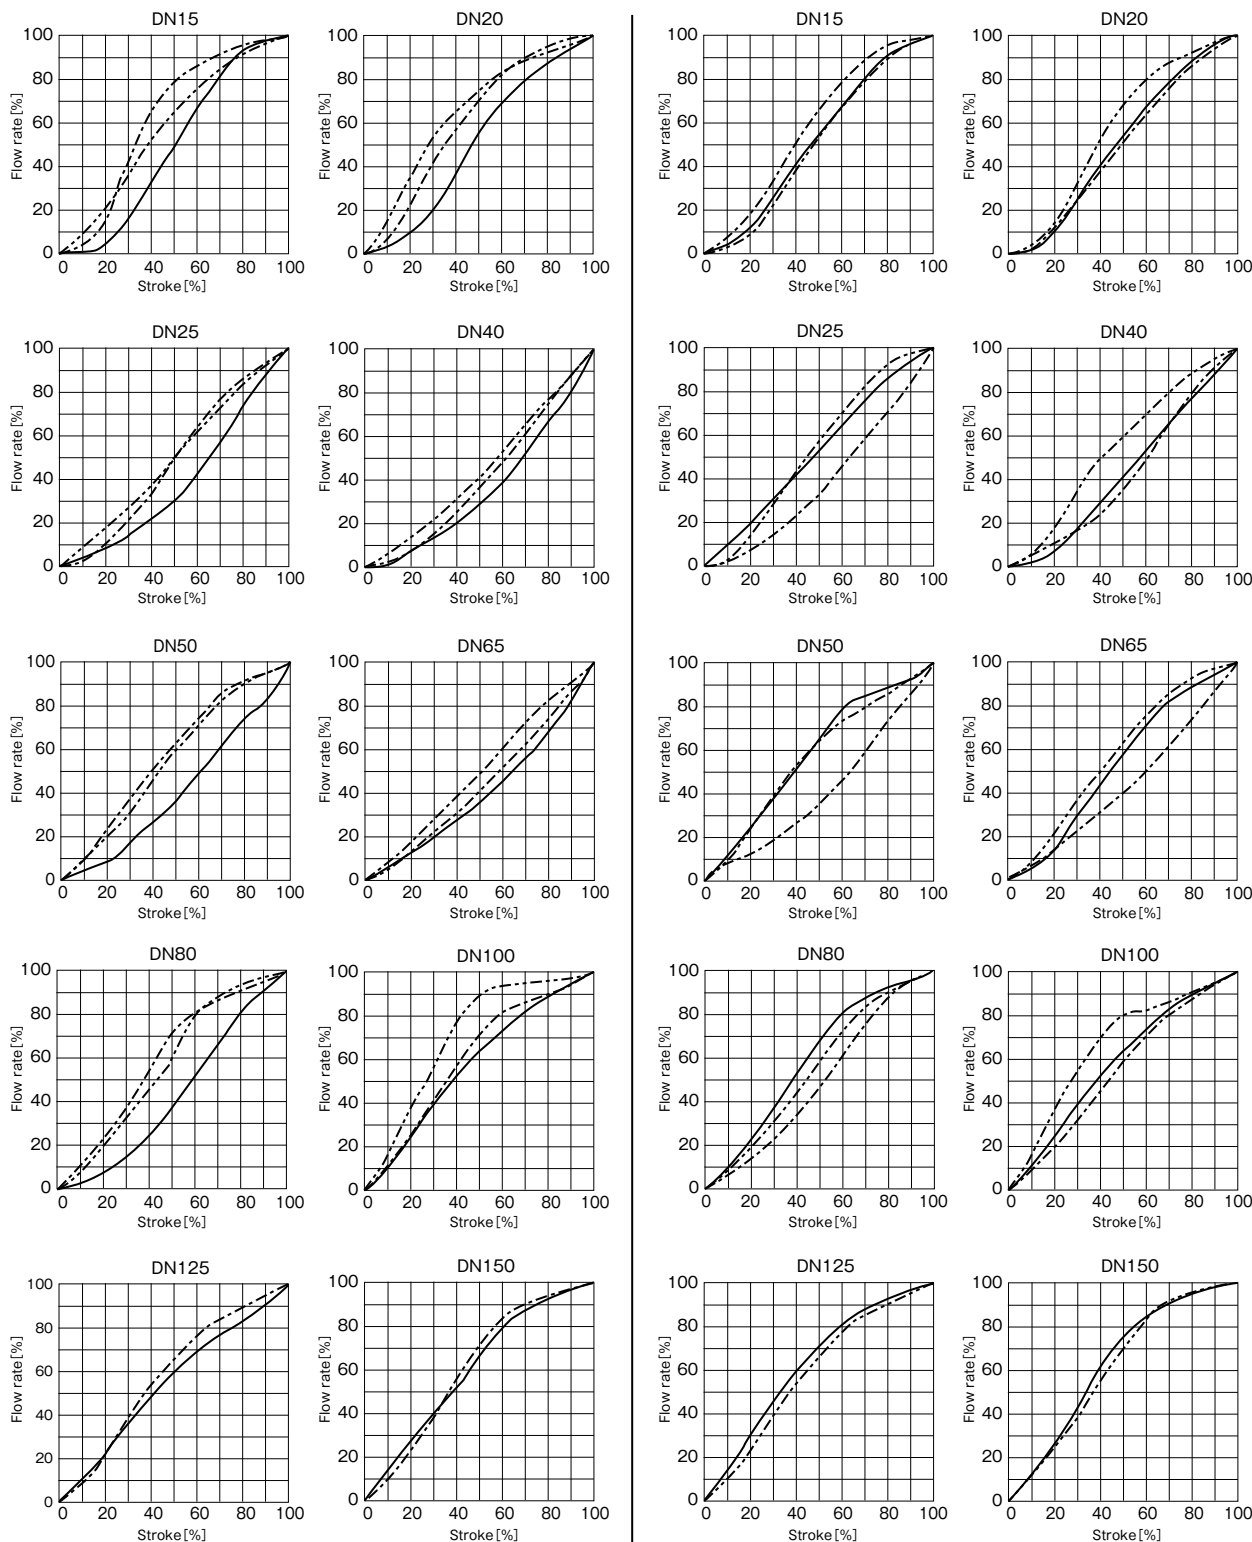

● Piston type: Type HN3400N

Nominal Size DN	Stroke (mm)	Main body without lining	Main body with rubber lining	Main body with glass lining	Main body with PFA lining
150	55	520	435	570	325

Specific Flow Rate Characteristics

Rolling Diaphragm Type: Type B0 (BC) 3400

———— : Glass-lined main body - PTFE diaphragm
 - - - - - : PFA-lined main body - PTFE diaphragm
 - · - · - : ETFE-lined main body - PTFE diaphragm

———— : Main body without lining - Rubber diaphragm
 - - - - - : Main body without lining - PTFE diaphragm*1
 - · - · - : Rubber-lined main body - Rubber (or PTFE) diaphragm

*1.DN125 and 150 have characteristics approximately similar to rubber diaphragm.

- The charts show the specific flow rate characteristics actually observed by this company. In actual service, the flow rate characteristics may vary depending on the pressure, temperature, flow velocity, piping and other condition.
- Piston type: Type HN3400N, contact our Sales Dept. or local representative for the details.

4

ELECTRICALLY OPERATED DIAPHRAGM VALVE

4-1. Specifications of Electrically Operated Valve

- ① MS type: Seibu Electric & Machinery Model
- ② NR type: Nihon KOSO Model

4-2. Weir Type Diaphragm Valve: Type MS(NR)4400

- ① Actuator selection table
- ② Principal dimensions

4-3. Straight Type Diaphragm Valve: Type MS(NR)4500

- ① Actuator selection table
- ② Principal dimensions

1. Specifications of Electrically Operated Valve

① MS type: Seibu Electric & Machinery Model

● Features

- ① Widely used by the government office for water treatment facilities and for power plants.
- ② Manual return type is the standard for safety purpose.
- ③ Rich selection of accessories (motor with the brake, electric positioner, etc.)
- ④ Control valve is also available in addition to the ON-OFF valve.

● Standard Specifications

Valve type	Types MS4400 (Weir type), MS4500 (Straight type):	
Power supply	Motive power	3-phase AC power supply, 200/220 VAC, 400/440 VAC, 50/60Hz
	Operation	Single-phase AC power supply, 100/110 VAC, 200/220 VAC, 50/60Hz
Motor	Structure	Flange type fully closed outdoor type(MRS is a built-in type fully closed outdoor type.)
	Number of pole	4 poles
	Brake	None
	Insulation	Type B(MRS), Type E(MAS-MFS)
	Rating	15 min
Operating machine	Structure	Outdoor type (IP55)
	Selection system	Manual return system with selection lever
Switch	Position switch	Contact configuration: 1a1b contact (each one provided to OPEN and CLOSE sides)
	Torque switch	Contact configuration: 1c contact (each one provided to OPEN and CLOSE sides)
	Interlock switch	Contact configuration: 1c contact
Accessory	Space heater	With 30 W (10 W for MRS type)
	Opening indicator	0 ⇔ 100% indication
Standard exterior painting color	Silver (environment-friendly type)	
Optional	Special power supply, motor with the brake, automatic return system, explosionproof type, various types of transmitters, etc. can be arranged.	

● Structure and Materials for Major Parts

Part No.	Part No.	Material
1	Main body	
2	Diaphragm	
4	Bonnet	FC200
6	Compressor	Note (1) FC200
7	Spindle	SUS304
7A	Spindle A	SUS304
7B	Spindle B	SS400
45	Yoke	FC200
77	O-ring	NBR

Note (1) Nominal size DN25-100 for Type 4400 is SCS13.)

● Internal Connection Diagram (For reference)

Limiterorque (Nippon Gear), Rotork (Shimadzu) and other electrically operated machines are installable in addition to MS type and NR type above. For the details, contact our Sales Dept. or local representative.

② NR type: Nihon KOSO Model

● Features

- ① Compact motor-operated machine for small bore valve.
- ② Operable with a single-phase power supply
- ③ Economical as it consumes only little power compared with MS type.
- ④ Valve open-close operation with a single select switch.
- ⑤ Control valve is also available in addition to the ON-OFF valve.

● Standard Specifications

Valve type	Types NR4400 (Weir type), NR4500 (Straight type)	
Power supply	Single-phase AC power supply, 100/110 VAC, 200/220 VAC, 50/60Hz	
Motor	Structure	Reversible motor (with thermal protector)
	Number of pole	4 poles
	Brake	With permanent brake
	Insulation	Type E
	Rating	30 min
Operating machine	Structure	Outdoor type (IP55)
	Selection system	Manual spindle pushing
Switch	Position switch	Contact configuration: 1b contact (each one provided to OPEN and CLOSE sides)
	Auxiliary switch	Contact configuration: 1c contact (two provided)
	Torque switch	None
	Interlock switch	None
Accessory	Opening indicator	O(OPEN) ⇔ S (SHUT) indication
Standard exterior painting color	Metallic blue *Any special paint is not applicable.	
Optional	Space heater, electric-electric positioner, separate terminal box	

● Structure and Material for Major Parts

Part No.	Name	Material
1	Main body	
2	Diaphragm	
4	Bonnet	FC200
6	Compressor	SCS13
7	Spindle	SUS304
45	Yoke	FC200
95B	O-ring	NBR

● Internal Connection Diagram

U-X	Turn to CCW direction (OPEN direction)
V-X	Turn to CW direction (CLOSE direction)
7-10	ON at hinged end of CCW (fully open position)
9-10	ON at hinged end of CW (fully closed position)
TP	Thermal protector
SH	Space heater (optional)
LS3,LS4	Limit switch can be set for activation at an arbitrary position.

Turning direction is as viewed from the top of the operating machine. The diagram shows a hinged end at CW (fully closed position.)

If the 2 units of electric operating machines are simultaneously operated with the wiring as shown in the lower left-hand corner, a detour circuit is established through the capacitor leading to abnormal operation. Always arrange for the operating switches separately as shown to the right.

INTRODUCTION OF RELATED PRODUCTS

① Gauge Valve type: Type 400G

- Liquid level inspection valve using the structure and features of weir type diaphragm valve.
- Main body made of lining material (hard natural rubber, glass, etc.) is corrosive liquid resistant.
- Applicable nominal size: DN20

② Rubber-lined Check Valve

- Check valve with rubber lining material is manufactured using technology for rubber lining processing.
- Sealing system for DN15 - 80 is a ball type valve body and DN100 and 150 a swing type valve body.
- This valve is exclusively for a vertical piping. (Swing type valve body is applicable to level installation as well.)

③ Bioclean Diaphragm Valve series

- Valves of optimal sanitary specifications are available for the production lines of pharmaceutical, cosmetic, food, semiconductor and other industries. Bioclean Diaphragm Valve series most utilize the advantages of diaphragm valve structure that "contaminates no fluid and provides superb self-purifying performance."
- For more details, please refer to our Sanitary-related Valve Product Guide.

Order made system available to develop products meet customers' need;
Inquire us for other options for actuators, special shaped body, special material products, etc.

Flange type**1. Flange standard:**

The above standard comply with JIS B2220 (steel pipe flange with nominal pressure of 10K). The flange thickness t shall comply with BS10 Part 2-TABLE D (British Standard Class D).

2. The flange thickness t shall be classified as follows:

FC: Gray casting, ductile steel casting

Other than FC: Steel casting, stainless steel casting, and bronze casting

3. Packing face:

Standard face shall be flat face. The above table shall apply to stainless steel casting, particularly when raised face is specified. The standard of this company shall apply to ETFE-, PFA-, and glass-lined material for the main body that constitute a raised face from their manufacturing method.

4. Other Standards:

We also manufacture flanges under other standards such as ANSI Class 125/150. Standards of Japan Water Works Association, DIN PN10/16. The thickness of flanges shall be all as per above-mentioned table. (Depending on body materials, either of ANSI Standard Class 125 or 150 is applied, but the both flange bolt hole pattern is same.)

5. Face-to-face dimension:

Complies with ISO 5752.

6. Bolt and nut:

Because of narrow space for the hexagon piping nut on the back of the flange of nominal size DN15 - 80, use of continuous-thread stud and hexagonal nut of JIS Standard (8-slit nut) is recommended.

②

Special specifications: Nameplate, Painting, Photography and Witness inspection

1. Nameplate:

Nameplates indicating the valve name and other special naming are available by option.

2. Painting:

Standard painting shall be as follows:

Manually operated valves: Rust resistant paint (Gray) without top coating

Automatically operated valves (pneumatic and electric): Rust resistant paint and silver top paint

For special coating, please specify details for separate estimate.

3. Photography:

Photography is available by option.

4. Witness inspection:

Witness inspection by inspection agency is option.

③ How to read the product code number

*1 : See p.10 and 15. *2 : See p.11 and 15.

[Note]

- This table is applicable only for the diaphragm valve materials used by our company. The data is not applicable to composite chemical solution. For specific chemicals, contact our Sales Dept. or local representative.
- Rubber-lined bodies are not applicable to by-product hydrochloric acid (hydrochloric acid obtained as a by-product in the manufacturing process of chloromethane, chloroform, vinyl chloride, trichloroethylene and chlorobenzene). Bodies with ETFE or PFA lining are recommended.

⑤ Actuator Selection Table

Fluid pressure stated in the actuator selection table in this catalog represents the pressure to the primary side when no pressure is applied to the secondary side (atmospheric pressure). If the secondary side is loaded with the pressure when the valve is closed, a greater output may be required. In such a case, please contact our Business Dept.

Use the selection table in this catalog.

Contact us as correction is required.

SAFETY INSTRUCTIONS

1 Cautions for selecting the valve

- ① Products described in this catalog have respective range of application specified according to the official standards and our own standard. Customers are requested to check on your conditions for usage (fluid, pressure, temperature, etc.) before selecting an optimum product.
- ② Select the material for the main body (lining), diaphragm, bonnet, compressor, base and other depending on the fluid you are to handle. As to the materials for the main body (lining) and diaphragm, please refer to the material selection table in the catalog or contact us. Please note that certain types and sizes of bonnet, compressor, base, etc. are standard manufactured using aluminum alloy. Optionally these products are also manufactured using steel material (FC200, SCS13, etc). When handling some liquid that erodes aluminum alloy, using steel material is recommended for the sake of safety. Please discuss this matter when placing orders.
- ③ When using Type 500 (Straight type), care should be taken for the following matters due to valve characteristics:
 - (1) Avoid using it in a vacuum environment.
 - (2) Avoid controlling it or using it with the opening set to intermediate level.
 - (3) Avoid using it for handling a fluid of 70°C or over continuously with the valve fully open.
 - (4) Avoid using it with the valve fully closed at a discharge side of a pump for example where high pressure or pulsation is momentarily loaded.
 - (5) Avoid using it for an abrasive fluid with the valve almost fully closed.

2 Cautions at Receiving and during Delivery

- ① Upon receipt of valves, check that the product and quantity are as ordered. Also check if the package and packing are undamaged.
- ② Certain items weigh heavy. When unloading or delivering the product, mind the safety by using an appropriate hoisting machines, etc. in conformity to Occupational Safety and Health Act or equivalent law. Never enter directly below a hoisted product package or operate the hoist from under the raised package.
- ③ If wetted, cardboard boxes may lose packing strength. In such a case, handle them with utmost care.
- ④ When handling a main body with the lining of hard rubber or glass lining or ceramic body, handle carefully and protect it from a strong impact or the lining may be damaged.

3 Cautions for Storage

- ① Users are recommended to keep the product in packed state until starting installation to the piping.
- ② When storing the valve in unpacked condition for a period of time, always keep the protective seal (a cap) on to the face of the flange for piping.
- ③ To prevent the valve from rust or rubber and plastic material from degradation, store the valve in the following conditions:
 - (1) Keep away from the rainwater.
 - (2) Keep away from direct sunlight.
 - (3) Keep it at the ambient temperature of 60°C or lower.
 - (4) Keep away from high humidity and dusty atmosphere.

4 Cautions for Installation to the Piping

- ① Remove the protective seal (a cap) from the connecting flange face of the main body. Check the inside of the valve for any contamination or attachment of foreign matters. Also check the piping system to connect the valve to for cleanliness and any foreign matters. Apply a gas blowing or liquid flushing as may be needed. Foreign matters inside the valve if any may cause leakage when caught between the valve base of the main body and the diaphragm.
- ② Provide a space around the valve necessary for overhauling. Such a space should allow to replace the diaphragm with the main body remaining connected to the piping. Particularly, when hoisting the bonnet, necessary space must be provided for the hoisting operation.
- ③ When installing the valve to the piping, prevent it from receiving abnormal tension, compression or bending stress.
- ④ In the case of a flat face flange, use a gasket that fully covers the flange face. If a soft rubber-lined body is covered with a gasket that fails to cover the flange face completely, the lining may be damaged or leakage may occur.
- ⑤ Use rubber gasket to the rubber-lined main body.
- ⑥ For connection to the piping, use the bolts of a length that makes no contact with the bonnet flange or use continuous thread studs and adjust the length of the protruding head of the stud. Tightening the bolt in contact with the bonnet flange may cause external leakage or damage the bonnet, causing the valve failure.
Particular care is required to the contact of the bonnet flange with the piping bolt when installing a valve of DN15 to 80 to the piping.
Users are recommended to use a double-end stud for the piping bolt and the nut of Style 1 (JIS B 1181), Class 1 or 2 (JIS B 1181 Attachment 1). Make adjustment to prevent contact between the bonnet flange and the piping bolts.
Adjustment position should read a position where the end face of the bolt is flush with the end face of the nut. (Select a bolt so that the fit length of the thread will be definitely at least 80% or higher of the height of the nut.)
- ⑦ When installing the valve to the piping, tighten individual bolts alternately and diagonally under identical torque. Unevenly clamped bolts may cause leakage from the connecting flange face.
- ⑧ Products with the air vent port (manually operated valve of DN125 and over, pneumatically operated valve and electrically operated valve) should be protected from the entry of rainwater, etc. through the port.
- ⑨ When connecting the valve with welded joint, always remove the bonnet including the diaphragm from the main body before welding. Reinstall the bonnet and all including the diaphragm after the temperature of the welded portions reaches the normal temperature.
- ⑩ Care should be given to the following points for wiring:
 - (1) Before closing the switch cover, make sure that the gasket is perfectly applied and the mating face is cleaned. Close the switch cover by tightening the mounting bolts steadily.
 - (2) Outlet port for the outside lead wire should be made rainwater-proof.
 - (3) Always keep the switch cover closed.
 - (4) Positively never carry on outdoor wiring work in the rain.
 - (5) After making wire connection, always check operation.

5 Cautions for Machine Operation

- ① Opening/closing the valve with part of an operator's body or wear carelessly in contact with the moving parts inside or outside of the valve may lead to a serious injuries. Never touch the inside or moving parts of the valve.
- ② When opening/closing the valve, don't operate the handwheel by hooking an auxiliary pipe or wrench on it. Or an excessive load will be applied to the valve component possibly to damage it.
- ③ When operating the handwheel to close the valve, stop the closing operation at maximum 15 to 20 degrees after sensing the valve resistance to the closing motion.
Excessive tightening may cause a shorter diaphragm life. Particular care is required when handling a fluid in high temperature.
- ④ If the handwheel operation is felt heavier in the middle of a valve closing operation, certain foreign matters might have been caught with the valve seat. In such a case, open the valve once, let the fluid flow through, and check if the foreign matters are washed away, then start the closing operation again.
- ⑤ If ambient temperature or fluid temperature changes greatly while the fluid is sealed inside the piping, thermal expansion of the fluid causes the pressure to change, possibly leading to external leakage or damaged diaphragm.

In addition, if the valve is operated to open/close while the valves before and after the diaphragm valve are closed and the inside fully filled with the fluid, the same phenomenon may occur, for which care should be taken.

- ⑥ If the fluid fully inside the valve is frozen, the valve may be freeze-fractured. For application in an environment where freezing may likely happen, take anti-freeze measures by providing the piping with thermal insulation or if the valve is not in use, to extract liquid from inside the valve, etc.
- ⑦ Rubber is used for the material of diaphragm. The nuts that clamp the diaphragm may be loosened due to vibration during transportation or stress relaxation after a long period of operation. In such a case, render the diaphragm unloaded by nullifying the fluid pressure, then apply prescribed torque to tighten the nuts to the required level.

6 Cautions for the Actuators of Pneumatically, Electrically Operated Valve

- ① Protective sealing (cap) is provided to the air intake port and the electric wiring connection port. Don't remove the sealing (cap) until the connection joint is installed.
- ② Actuators are shipped factory-adjusted. Don't disassemble and reassemble them. If any adjustment is required, please contact us.
- ③ Dehumidify the air and filter it clean before leading to the valve for application.
- ④ For the operating pressure and power supply, see the nameplate or the specifications of delivered product.
- ⑤ Protect the products with the air vent port against the entry of rainwater.

7 Cautions for Disassembly and Assembly

This is general information. Do not disassemble before you read necessary manual in details.

- ① When removing or disassembling the valve, ensure the following matters or you may be risking a serious hazard:
 - (1)The object valve should have been separated from other piping.
 - (2)The fluid pressure and temperature inside the piping and the valve should be atmospheric and normal.
 - (3)There remains no residual fluid inside the piping, and no fluid leakage occurs when the mounting bolts and nuts are loosened.
- ② Provide maintenance work for the diaphragm and actuator periodically.
 - (1)Rubber diaphragm is screwed in. When mounting to the compressor, apply appropriate pressure to screw it in. Slightly bring it back from where it stopped to align the bolt hole positions.
 - (2)PTFE diaphragm is of a bayonet type. To install to the compressor, push the center of a diaphragm firmly with fingertips. Ensure that the pin has fully entered the compressor before turning it 90 degrees clockwise or counterclockwise.
In the case of a reverse seat type diaphragm, turn it over before installation. Turning the diaphragm before the pin fully enters the compressor may damage the pin.
 - (3)When reassembling to the valve, run centering, and tighten the bolts and nuts evenly by applying prescribed torque.
 - (4)For detailed maintenance instructions, see the instruction manual or contact our Sales Dept. or local representative.

Fully insert
the pin

- The ISO 9001·14001 certificate was awarded

CAUTION

Specifications and performance figures of products contained in this catalog are based on the design calculations, in-house tests, actual records of product application, and the official standards and specifications. They are presented as the user guide on the use of product concerned under general service conditions. Users intending to use the product under a special condition are required to receive engineering advice from this company in advance or to make their own studies and evaluation to verify performance on their own responsibility. This company shall not be liable for any damages, material or human, that may arise without following this procedure. Inasmuch as full care was taken in editing this catalog, users are kindly requested to make contact with this company for any questions or discrepancies found. This catalog is subject to change without notice for the purpose of correcting error, supplementing or improving insufficient content, updating the content to the improved product performance, design change, discontinuation of product and other reasons. Revised version automatically invalidates catalogs issued prior to the current version. Check the version with our Sales Dept. or local representative before you place orders.

WARNING CAUTION

There are some instructions for use of diaphragm valve because of a constructional characteristic. When valve is delivered, the leaflet related to instruction on Safety is bundled. Please read this instruction thoroughly before beginning of use and handling to use your product safely and stably for a prolonged life.

NDV NIPPON DAIYA VALVE CO., LTD.

Head Office ————— 1-3-22, Hiro-machi, Shinagawa-ku, Tokyo 140-0005
