Ordering: T-473 is normally furnished with Bronze Disc (T-473-B). Available with PTFE Steam Disc (T-473-Y).

Install 5 pipe diameters minimum downstream from pump discharge or changes in direction to avoid flow turbulence. Flow straighteners may be required in extreme cases.

Note: On pump discharge, the preferred check valves are:

inline, spring assisted, center-guided, lift checks.

NIBCO® Check Valves may be installed in both horizontal and vertical lines with upward flow or in any intermediate position. They will operate satisfactorily in a declining plane (no more than 15°).

Warning - Do Not Use For Reciprocating Air Compressor Service.

• For detailed Operating Pressure, refer to Pressure Temperature Chart on page 114.
