Jamesbury™ Value-Line™ 1/4" – 2" (DN 8 – 50) series 3000 screwed NPT ball valves

Jamesbury™ Series 3000 ball valves are perfect for applications where positive, long-lasting shutoff is required. Ideal for vent, by-pass, sampling, and gauge locations, these valves provide cost-effective shutoff in a wide range of process industry, manufacturing, commercial, and OEM services. The double reduced design eliminates the insert joint, allowing a single piece body.

Series 3000 valves are available in carbon steel with 316 stainless steel trim, or all 316 stainless steel. Seat options include PTFE (T) for services to 400°F (204°C); filled PTFE (M) for abrasive services, service to 500°F (260°C), steam to 250 psi (17 bar), or for applications with wide temperature fluctuations; and Acetal (R) seats for services to 2000 psi (138 bar).

FEATURES

Tight Shutoff

- Polymer seats provide tight shut-off in either direction.
- Unique seat design incorporates a flexible lip which automatically compensates for wear and for changes in pressure and temperature.

Fire-Tite™

- Standard valves with PTFE and filled PTFE seats are Fire-Tite in accordance with API607 Edition 4.

Top Ground

- Valves are inherently stem-to-body grounded.

Lockable Handle

- Standard valves are equipped with a lockable handle that may be padlocked in either the open or closed position.

Rugged Unit-Body Construction

- Single-piece body minimizes potential leak paths.

Internal Entry Stem

- Anti-blow-out design provides inherent stem retention.

SPECIFICATIONS

Valve Body Ratings

The following table shows the maximum working pressure rating of the valve body only. To determine the practical working pressure limitation of the valve, consult the seat rating chart. Working pressure rating is at -20°F to +100°F (-29°C to +38°C).

Valve Size (inches)	Body Material	
	Carbon Steel	316 Stainless Steel
1/4 – 2	Working pressure	2000 psi

Valve Size DN	Body Material	
	Carbon Steel	316 Stainless Steel
8 – 50	Working pressure	138 bar

Valve Seat Ratings

These ratings are based on differential pressure with valve ball in the fully closed position and refer to seats only. Refer to valve body ratings to be sure that all components are satisfactory. Valves in carbon steel are suitable for service to -20°F (-29°C), valves in 316 stainless steel to -60°F (-51°C) (to -40°F (-40°C) with Acetal seats).

Flow Data

The table at right provides flow coefficients for *Jamesbury* valves covered in this section. The C_v values represent the flow of water at +60°F through the valve in U.S. gallons per minute at a pressure drop of 1 psi. The metric equivalent, K_v , is the flow of water at 16°C through the valve in m³/hr at a pressure drop of 1 kg/cm². To convert C_v to K_v , multiply by 0.8569.
