

# Diaphragm Valve Two Stage Actuator Metal

## Construction

The GEMÜ 658/688 2/2-way or multi-port metal diaphragm valve has a two stage actuator.

The actuator has a stainless steel housing and is controlled by two pistons working independently of each other (for function see page 3).

## Features

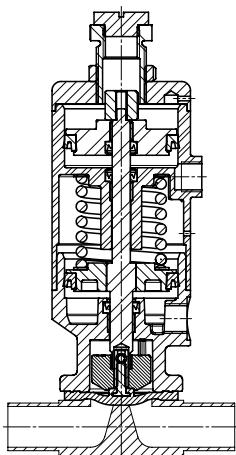

- Suitable for inert and corrosive\* liquid and gaseous media
- CIP/SIP cleaning and sterilizing capabilities
- An adjusting screw in the actuator enables the setting of the opening and closing function and also the setting of a part stroke (for reduced flow)
- Fast on/off operation and the possibility for precision dosing of the working medium
- Insensitive to particulate media
- Valve body and diaphragm available in various materials and designs
- Compact design
- Versions according to ATEX on request

## Advantages

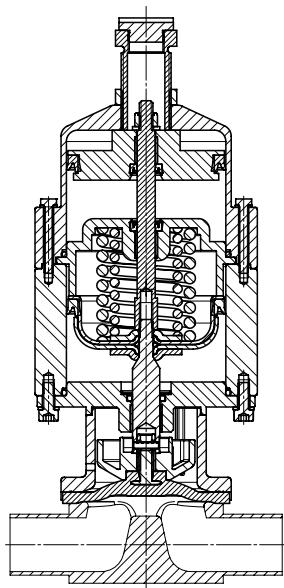

- Optional flow direction
- Installation for an optimized draining is possible
- Can be individually used. Space consuming piping systems and valve wiring are no longer necessary
- Extensive range of accessories, easily retrofitted
- With GEMÜ 688 the Closed and Open positions (full stroke) can be detected via M8x1 proximity switches. The proximity switches must be suitable for flush mounting. For diaphragm size 40 and 50 proximity switches with a minimum thread length of 1.38 inch are required.

\*see information on working medium on page 2

## Technical data

### Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

The valve will seal in both flow directions up to full operating pressure (gauge pressure).

### Temperatures

#### Medium temperature

FKM (code 4)	14 ... 194 °F
EPDM (code 13)	14 ... 212 °F
EPDM (code 17)	14 ... 212 °F
PTFE/EPDM (code 54)	14 ... 212 °F
PTFE/EPDM (code 5M)	14 ... 212 °F

#### Sterilisation temperature <sup>(1)</sup>

FKM (code 4)	not applicable
EPDM (code 13)	max. 302 °F <sup>(2)</sup> , max. 60 min per cycle
EPDM (code 17)	max. 302 °F <sup>(2)</sup> , max. 180 min per cycle
PTFE/EPDM (code 54)	max. 302 °F <sup>(2)</sup> , no time limit per cycle
PTFE/EPDM (code 5M)	max. 302 °F <sup>(2)</sup> , no time limit per cycle

<sup>1</sup> The sterilisation temperature is valid for steam (saturated steam) or superheated water.

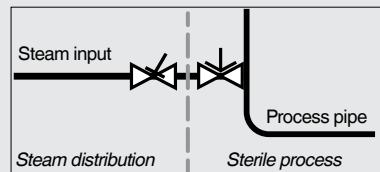

<sup>2</sup> If the sterilisation temperatures listed above are applied to the EPDM diaphragms for longer periods of time, the service life of the diaphragms will be reduced. In these cases, maintenance cycles must be adapted accordingly. This also applies to PTFE diaphragms exposed to high temperature fluctuations.

PTFE diaphragms can also be used as moisture barriers; however, this will reduce their service life.

The maintenance cycles must be adapted accordingly.

GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution.

The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time:  
A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

#### Ambient temperature

32 ... 140 °F

### Control medium

#### Inert gases

**Max. permissible temperature of control medium** 140 °F

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values.

Information on operating pressures applied on both sides and for high purity media on request.

MG = diaphragm size

Cv values determined acc. to inlet pressure 75 psi,  $\Delta p$  1 psi, stainless steel valve body (forged body) and soft elastomer diaphragm.

The Cv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Cv values may exceed the tolerance limits of the standard.

The Cv value curve (Cv value dependent on valve stroke) can vary depending on the diaphragm material and duration of use.

## Application example

## Functional description

When control pressure is applied, the lower actuator piston strokes 100%.

The stroke of the upper part of the actuator, however, can be steplessly limited from 0% to 100% by means of the stroke limiter (item 17) and secured by the lock nut (item 16).

When a stroke limiter is used, the piston (item 13) moves against the stroke limiter (item 17) and flow restriction is possible.

If the lower part of the actuator is under control pressure, the valve fully opens, pushing the spindle (item 27) upwards through the upper piston.
