

Construction

The new GEMÜ 660 2/2-way diaphragm valve was designed for dosing and filling a wide range of products.

All metallic actuator components are made of stainless steel. Normally closed, Normally open and Double acting control functions are available. The valve has an integrated stroke limiter and seal adjuster as well as an optical position indicator as standard.

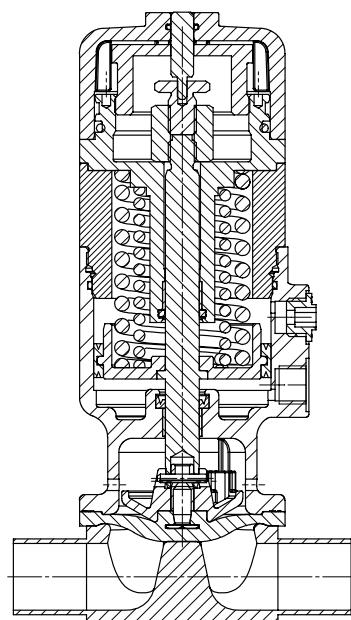

Features

- Suitable for inert, corrosive*, liquid and gaseous media
- Valve body and diaphragm available in various materials and designs
- Compact design (ideal when space is at a premium)
- Various connections available
- CIP/SIP capable
- Versions according to ATEX on request

Advantages

- Optional flow direction
- Installation for an optimized draining is possible
- Stroke limiter and seal adjuster easy to adjust
- Precise stroke scale on the cover, can be fixed, 10 scale points per turn, one full turn corresponds to 0.004 inch stroke
- Improved sealing
- Distance sleeves for the diaphragm (not for steam applications)
- 2 control air connectors in flow direction, 4 control air connectors as an option, two of which are arranged across the flow direction
- Fast cycle duties due to minimized filling volume
- Reduced air consumption
- Mounting of electrical position indicators (as an option)

*see information on working medium on page 2

Sectional drawing

Technical data

Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

The valve will seal in both flow directions up to full operating pressure (gauge pressure).

Temperatures

Medium temperature

drinks filling	14 ... 185 °F
other applications	14 ... 212 °F

Sterilisation temperature ⁽¹⁾

EPDM (code 13/3A)	max. 302 °F ⁽²⁾ , max. 60 min per cycle
PTFE/EPDM (code 54)	max. 302 °F ⁽²⁾ , no time limit per cycle

¹ The sterilisation temperature is valid for steam (saturated steam) or superheated water.

² If the sterilisation temperatures listed above are applied to the EPDM diaphragms for longer periods of time, the service life of the diaphragms will be reduced. In these cases, maintenance cycles must be adapted accordingly. This also applies to PTFE diaphragms exposed to high temperature fluctuations.

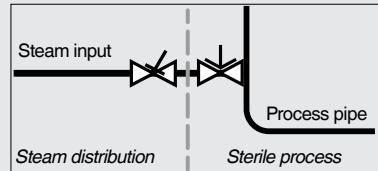

PTFE diaphragms can also be used as moisture barriers; however, this will reduce their service life.

The maintenance cycles must be adapted accordingly.

GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution.

The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time:

A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

Ambient temperature

32 ... 140 °F

Note:

The GEMÜ 660 diaphragm valve was specially developed for applications in the drinks filling sector. It is therefore important that the same volume of medium flows through the valve for each opening procedure without any additional control systems. To guarantee this behaviour, the diaphragm is equipped with four distance sleeves, meaning that equal compression of the diaphragm is achieved for each installation.

After a sterilisation cycle, it may be necessary to retighten the diaphragm as a result of their material-related setting behaviour. However, this is not possible using distance sleeves. Experience has shown that, after a sterilisation cycle, the diaphragm is completely replaced during filling processes in the beverages sector, which means that it is not necessary to retighten the diaphragm.

If you want to use the valve in processes that have sterilisation cycles, it can also be operated with a diaphragm that has no distance sleeves. However, this diaphragm must be ordered separately. The above-mentioned advantage to using distance sleeves does not apply in this case.

Control medium

Inert gases

Max. permissible temperature of control medium

140 °F

Filling volume

Actuator size	Control function 1	Control function 2+3
0	0.43 cu in	0.37 cu in
1	1.28 cu in	0.61 cu in
2	3.66 cu in	2.32 cu in

Actuator size	Operating pressure [psi]		Control pressure [psi]		
Code	Diaphragm size	EPDM	PTFE	C.f. 1	C.f. 2 + 3
0	8	0 - 75	0 - 75	73 - 102	max. 80
1	10	0 - 75	0 - 75	73 - 102	max. 102
2	25	0 - 75	0 - 75	58 - 102	max. 102

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values.

Information on operating pressures applied on both sides and for high purity media on request.

MG = diaphragm size

Cv values determined acc. to inlet pressure 75 psi, Δp 1 psi, stainless steel valve body (forged body) and soft elastomer diaphragm.

The Cv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Cv values may exceed the tolerance limits of the standard.

The Cv value curve (Cv value dependent on valve stroke) can vary depending on the diaphragm material and duration of use.

Diagrams - Control function 2/3

MG = diaphragm size

The control pressure depending on the prevailing operating pressure, as shown in the diagram, is intended as a guide for operating the system with low wear on the diaphragm.
