Hammond, La., USA

Cameron is a leading provider of valves, valve automation and measurement systems to the global oil and gas industry. Our products are used primarily to control, direct and measure the flow of oil and gas as it is moved from individual wellheads through flowlines, gathering lines and transmission systems to refineries, petrochemical plants and industrial centers for processing.

Cameron provides a wide range of valves for use in natural gas, LNG, crude oil and refined products transmission lines. The traditional CAMERON® fully welded ball valve product line has been combined with the GROVE®, RING-O®, TOM WHEATLEY®, ENTECH™, TEXSTEAM™ and TK® product lines. This broad offering has strengthened Cameron's ability to serve as a single source provider for a wide scope of customer requirements. Cameron also provides critical service valves for refinery, chemical and petrochemical processing businesses, and for associated storage terminal applications, particularly through its ORBIT® and GENERAL VALVE® product portfolios. These brands are complimented by WKM® and TBV™ valve products and considerably expand the scope of Cameron's product offerings.

The TK brand is the recognized leader in metal-to-metal seating and weld overlay technology for severe service conditions. Customers have available a variety of stainless steel and high-nickel alloys which can be applied to the valve's critical areas, improving valve performance and increasing service life.

TK Trunnion Mounted Ball Valve

Why TK?

With many quarter-turn ball valves on the market meeting standard applications, Cameron's TK ball valves offer end users a longer service life alternative when erosive, corrosive or combinations of extreme service conditions are present. For over 50 years, the TK brand has supplied service engineered solutions in demanding oil and gas environments.

How?

Cameron's TK valves utilize robust components designed around wide seat sealing surfaces and optional non-corrosive plated or weld overlay on internal wetted surfaces.

When end users evaluate safety and total cost of ownership, TK ball valves provide great value.

DOUBLE BLOCK-AND-BLEED DESIGN

The TK OF valve is an end-entry, trunnion mounted ball valve.

STANDARD FEATURES

- TK OF design – original fire-safe with soft-seat inserts
- Bolted forged body
- Trunnion mounted (some soft-seat designs are non-trunnion seat-supported designs – see product design matrix)
- Wide seat-sealing contact area
- Fire-safe
- Piston-action SR (self-relieving) seats
- Spring-energized seats for sealing at low line pressure
- O-ring stem seals – double barrier
- Secondary stem sealant injection (2" and above)
- Secondary soft-seat sealant injection (6" and above)
- Double block-and-bleed
- NACE MR0175

OPTIONAL FEATURES

Twin Valve

The TK Twin Valve utilizes the proven TK design in a twin ball body satisfying double-isolation requirements as specified in most process safety management systems. By combining two valves into one body, the Twin Valve reduces weight, envelope dimensions and potential leak paths.

Metal Seated

The TK MF design offers metal-to-metal seat sealing ideally suited for the following applications:

- High-temperature and abrasive services
- Severe corrosive mediums
- Coal gasification
- Throttling and control services

The TK metal-seated design has a temperature range of -50° F to 550° F (-45° C to 287° C) and meets acceptance criteria per API 6D.

Sealing surface is critical to metal-seated valve performance. These valves utilize a proprietary grade tungsten carbide coating applied to both the ball and seats.

PISTON-ACTION SEATS

As line pressure increases, the seat reacts to the force of the pressure to form an effective seal. Line pressure against seat area A1 (see illustration) is not equalized by pressure against seat area A2. The difference in areas D times the line pressure creates a piston-action, which forces the seat unit against the ball surface. The net result of this piston-action is the formation of a tight, effective seal. In the absence of line pressure, coil springs around the seat unit provide a tight seal by keeping the seat in contact with the ball surface.

OPTIONAL FEATURES

TK Super Seal

Cameron developed the TK Super Seal to offer customers an option that significantly extends stem seal life.

Benefits

- Increased stem seal life
- Reduces chemical compatibility concerns
- Simplifies replacement of stem seals
- Provides superior secondary sealant injection
- Easily retrofitted on existing TK ball valves

Underground Extensions

TK ball valves are well suited for underground installations or remote services. Valves fitted with stem extensions can have extended vent drains. As an option, vent and drain lines can have two isolation valves – one next to the main valve and one at the top of the extension line ending below the valve operator.

Locking Devices

Standard key-operated locks and special safety interlock systems can be fitted on all TK valves. Lever-operated valves lock between bonnet and valve stop plate for maximum security and ease of installation. Gear-operated valves lock between input shaft and gearbox operation.

Grit-Excluder Seat Design

In some abrasive applications, solid particles can get trapped behind the seat holders. This can make the valve difficult to operate and cause premature wear of the seat O-rings or seals. The grit-excluder seat design reduces this problem by restricting the pathway of particles entering the area behind the seat holders. This seat design is available on both soft- and metal-seated valves.

CERTIFICATIONS AND COMPLIANCE

Cameron's TK products are designed and manufactured to international product standards and other approvals. TK proudly holds the second API 6D license 6D-0002.

- ISO 9001-2008
- APT 6D
- API 6FA
- API607
- SIL3 Capable
- NACE MR0175
- PED
- Fugitive Emissions Testing to Shell SPE 77/312
- CRN
- GOST

MATERIALS

Body and Trim

TK can provide appropriate materials for your unique service conditions. Multiple industry-accepted material selections are available.

TK OF Valves – Soft-Seated Insert

Soft-seat insert material selections include reinforced Teflon®, nylon, PEEK and other special materials. Contact our inside sales and engineering team for appropriate materials for your service conditions.

TK MF Valves – Metal-to-Metal Seat Sealing

The primary metal-seated option is a proprietary tungsten carbide coating for seat and ball sealing surfaces. Other special materials are available to meet your service conditions.

Weld Overlays

Cameron's engineering and manufacturing team are recognized leaders in weld overlay and metal-to-metal seat sealing technology. Non-corrosive weld overlays can be provided ranging from seat pocket protection to full internal wetted areas of the valve. Standard materials for overlay are 316 Stainless Steel or Inconel® 625 over forged carbon steel base materials.

Stem, Trunnion and Seat-to-Body-Seals

Elastomers are provided according to service requirements including special materials for high/low temperature and chemical compatibility. TK also provides lip seal stem sealing with our TK Super Seal option and seat-to-body lip seal sealing options for extended seal life and where chemical compatibility is a concern.

TYPICAL APPLICATIONS

- Oil and gas pipeline including high H₂S/CO₂ content
- Produced water/brine
- Suction and discharge isolation
- Station isolation
- Meter isolation
- Emergency shutdown (ESD)
- Coke cutting water
- Blowdown
- Offshore riser valves
- Launcher/receiver valves
- Low- and high-temperature service
- Fluid and gas well injection
- Double isolation (twin ball designs)
- Slurry service
- Coal gasification

Contact our inside sales and engineering team for your critical service conditions.

6 x 4	3/4 - 10 x 2-3/4	3/4 - 10 x 2	8

Space limitations prohibit the use of through stud bolts on one end of the smaller ASME Class 150 valves. These valves have one end drilled and tapped to accept a shorter-than-standard bolt or capscrew. Stud bolt and capscrew sizes listed below are for information purposes only and are not furnished with the valves. The use of stud bolts is preferred.

FLOW COEFFICIENTS (C_v)

(Flow coefficient, or C_v , by definition, is the volume of water in gal/min at 60° F that will flow through a given element with a pressure drop of 1 psi).

General Notes Concerning Dimensional Data

1. The sizes and ratings shown are not exclusive. Consult Cameron for additional information.
2. Dimension "A" (end-to-end) is the same for both raised-face and welding-end valves.
3. Dimension "B" is measured on the body end of two-piece valves and is with respect to a raised-face length.
4. Dimension "C" includes flange and bolt heads.
5. Dimension "E" (extreme width) does not include accessories such as bleed plugs, drains plugs and more.
6. Dimension "D" and "G" through "J" are for a typical gearbox. Dimension "I" includes dish in handwheel.
7. Weights are for a flanged valve and include the gearbox unless otherwise noted.
8. Dimensions shown may be revised from time to time. Use certified dimensional drawings in critical areas.
